MY STRAVA JOURNEY

Showing Up

Seven years on foot, from my own log

Gerald Tesha

This edition covers every activity I logged on Strava from 17 August 2019 to 25 October 2026: 2,061 of them.

Every number in this book comes from that log, and every chart is drawn from it. Distance and climb only count my four sports on foot: runs, walks, trail runs and hikes. I took out activity names and exact locations before publishing.

The book is my website, My Strava Journey, put together as one volume. I print a new edition each time the data is refreshed.

Annex A explains how I made it, and my contact details are on the page before the back cover.

Epilogue

ANNEX A How this book was made

ANNEX B About the data

Get in touch

Prologue

I uploaded my first activity on 17 August 2019. Over the next months I logged 62 outings, most of them runs on a treadmill. Then I stopped for 353 days, from July 2020 to June 2021.

When I started again, I did not stop. Since June 2021 I have been out on 1,435 of 1,947 days, and my longest break has been ten days. As I finish this edition, I am on 301 days in a row.

This book is me going back through that record. It is made from 2,061 activities and nothing else. Every number comes from my Strava log, and when the log cannot tell me why something happened, I say so and I do not guess.

There are five parts: the habit as a whole, each year on its own, my sports, records and places, the timeline and my goals, and last, what I think it all means. To everyone who gave me kudos along the way, *asanteni sana*, thank you very much.

The habit

The whole record at once: how often I go out, when, where, and what I do.

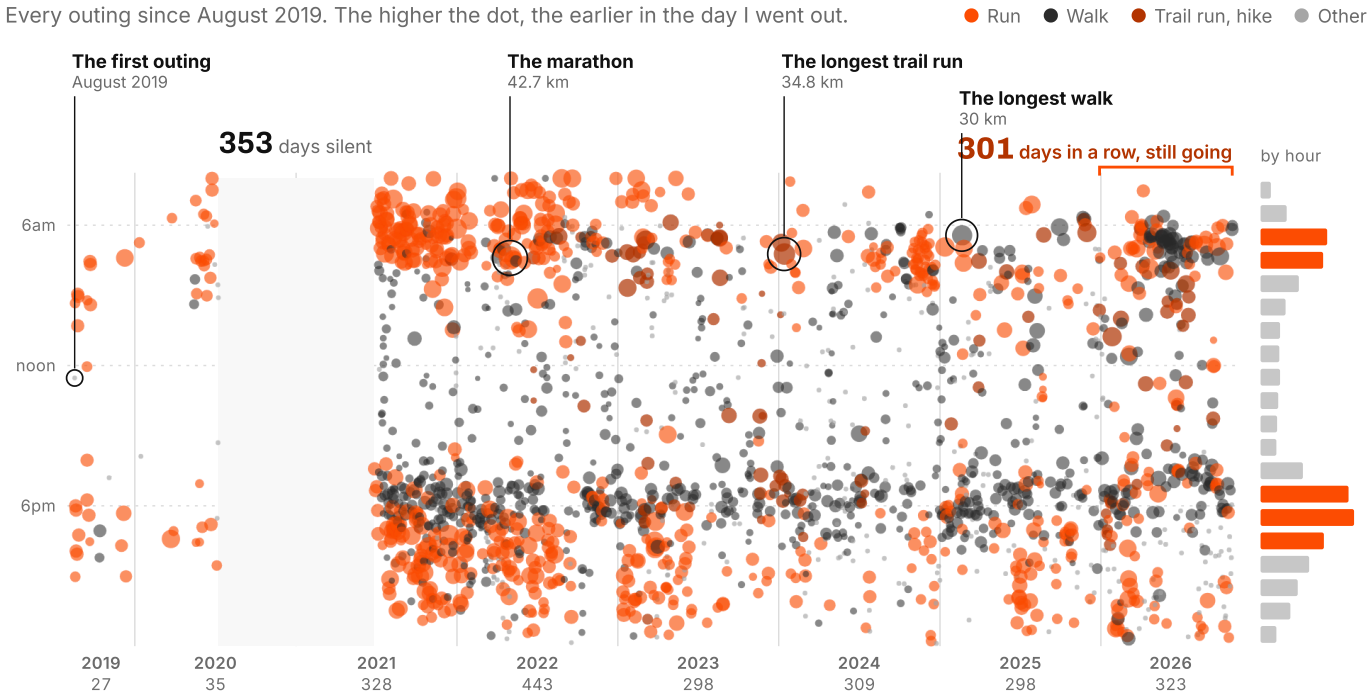

CHAPTER 1

01 The Journey

Seven years of one habit

The whole habit at once.

Every outing since August 2019. The higher the dot, the earlier in the day I went out.

2,061
ACTIVITIES
on 1,485 separate days

13,237 km
ON FOOT
a third of the way around the Earth

84,367 m
CLIMBED
nine and a half times up Everest

301 days
CURRENT STREAK
unbroken, and still going

Most of my outings are simple, a walk or an easy run of about 6 km, around one hour. What I have tried to do is to go out often. Over seven years I have been out on 57% of all days, and for the last 301 days I have not missed one.

OPEN A YEAR

2019 →

A small beginning

Mostly the treadmill. 85% of my outings were runs, many of them on weekends.

2020 →

The pause

Most outings were early, before 10 in the morning. Then I stopped logging for almost a year.

2021 →

Coming back

I started again. On 57% of my days out, I went out more than once.

2022 →

The busiest

Many short outings, about 56 minutes each.

2023 →

The hills

More hills. I climbed 12 m for every km and ran 303 km on trails.

2024 →

Travelling

I went out in five countries. Half my outings were done in under 35 minutes.

2025 →

Walking

Walks were 47% of my outings, and I did my longest walk, 30 km.

2026 →

Every day

Usually one outing a day, a longer one, about 98 minutes.

HOW THE STREAK HOLDS

One day leads to the next.

Usipoziba ufa utajenga ukuta: if you do not fill a crack, you will end up building a wall. I see this in my own log. After a day out, I went out again the next day 82% of the time, and after a full week of going out it was 95%. But after five days off, the chance I would go out was only 33%. So for me it is easier to keep going than to start again.

CHANCE THE NEXT DAY IS ACTIVE

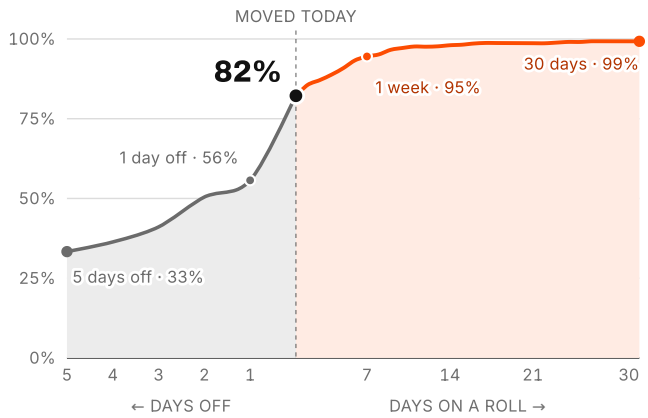

33%
after five days off

56%
after one day off

82%
after a day out

95%
after a week on a roll

THE ODDS, DAY BY DAY

Orange is after days out, grey is after days off.

	TOMORROW YOU MOVE	TOMORROW YOU REST
If you moved today	82%	18%
If you rested today	50%	50%

Source: Activity Log · every day marked active or rest, measured since the habit caught in 2021

BIG DAYS AND SMALL DAYS

The long days carry a lot.

My long days, over 20 km, are only one day in ten, but they carry 25% of my distance. That is about the same as my quieter half of days put together. Still, no one big day decides the total. My 13 biggest days together are less than 4% of it. The total comes from many days, one after another.

SHARE OF ALL DISTANCE ON FOOT

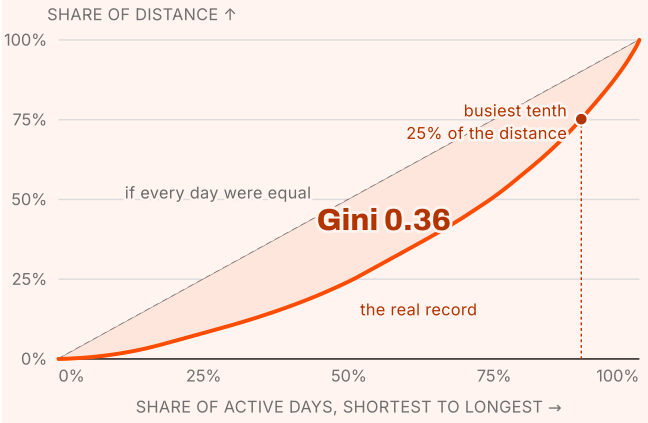

24% the quietest half of days

42% the busiest fifth of days

25% the busiest tenth of days

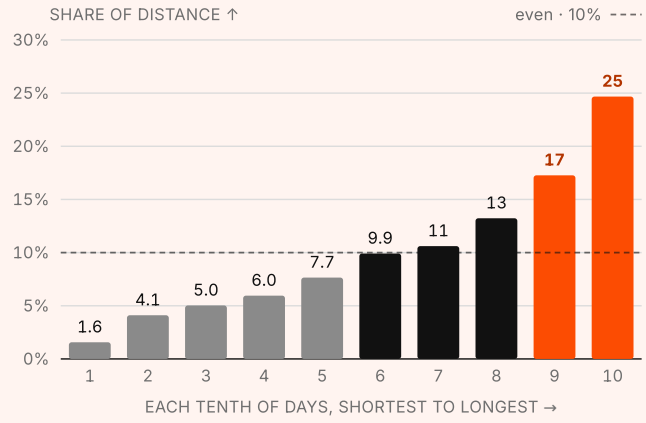

4% the 13 biggest days

EVERY DAY, ADDED UP

If every day were the same, the line would follow the dashed diagonal.

EACH TENTH OF DAYS, BY ITS SHARE

Source: Activity Log · daily distance on foot (run, walk, trail run, hike), 1,316 days

Same time, fewer outings.

The time I give each day has not changed much. On a day out I move for about 79 to 106 minutes, and that is true for every year. What changed is how I use it. In 2021, 57% of my days out had two sessions or more. Now most days have one, and it is longer.

HOW THE DAYS WERE SPLIT

A TYPICAL ACTIVE DAY, YEAR BY YEAR

DAYS WITH TWO OR MORE OUTINGS

Each block is one outing.

Source: Activity Log · moving time and outings per active day, by year

The climbing is in two regions.

Almost all the outings I can put on a map are here at home in Tanzania, 94% of them. The rest were short trips to Kenya, Malawi, South Africa and Rwanda, plus three that I count as others. At home I go out most in Dodoma, which is quite flat, so for climbing I have to travel. Kilimanjaro and Morogoro have only 29% of my outings in Tanzania, but 63% of the metres.

WHERE THE OUTINGS HAPPEN

94%

Indoor sessions cannot go on a map, so they are not here.

INSIDE TANZANIA: SHARE OF OUTINGS AND OF CLIMB

Where the orange dot is ahead of the grey ring, that region gave me more climbing than its share.

Source: Strava GPS start points · countries and Tanzania regions, distance and climb on foot

Walks took over.

I started as a runner, mostly on the treadmill. Over the years walking became my main thing. Since 2022 I have walked more often than I have run, every year. Of my 2,061 outings, 855 are walks, 782 are runs and 93 are trail runs and hikes. The rest are other activities.

SHARE OF ALL OUTINGS

41% walks

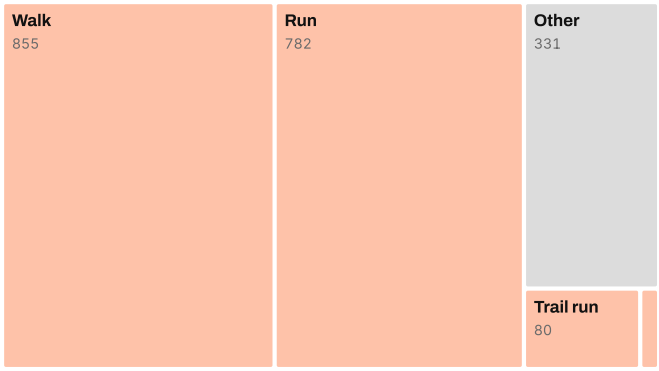

38% runs

5% trail runs and hikes

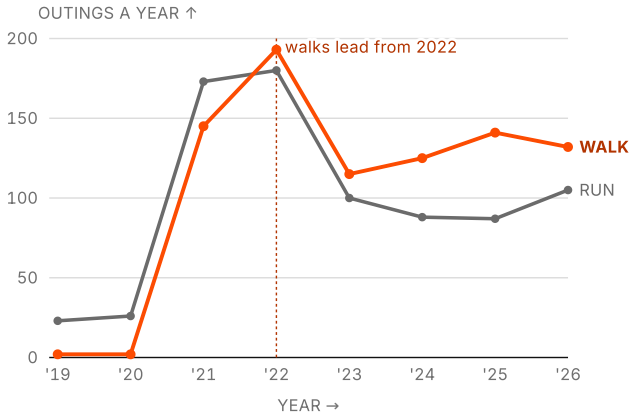

16% other activities

COMING BACK

The year it caught.

For the first half of the year there is almost nothing. Then, in the middle of the year, a few outings a month became dozens, and before the year ended I had gone out 109 days in a row.

2022

The busiest year.

I logged 443 activities, more than in any other year, and for the first time I walked more often than I ran, 193 walks to 180 runs. My climbing nearly doubled, to 12,623 m. I was out on 266 days, about two days in every three.

CHAPTER 3

03 Sports

My four sports on foot

My four sports on foot: running, walking, trail running and hiking. I keep treadmill runs apart from outdoor runs, because in my log they behave like two different sports.

FOUR SPORTS ON FOOT

Runs cover the ground.

Of my 2,061 outings, 1,730 were on foot. Most of them are runs and walks, with some trail runs and hikes when I can get to the hills. Much of my running was on a treadmill, 629 of 782 runs, so on this page I count the treadmill as its own sport.

THE FOUR SPORTS ON FOOT

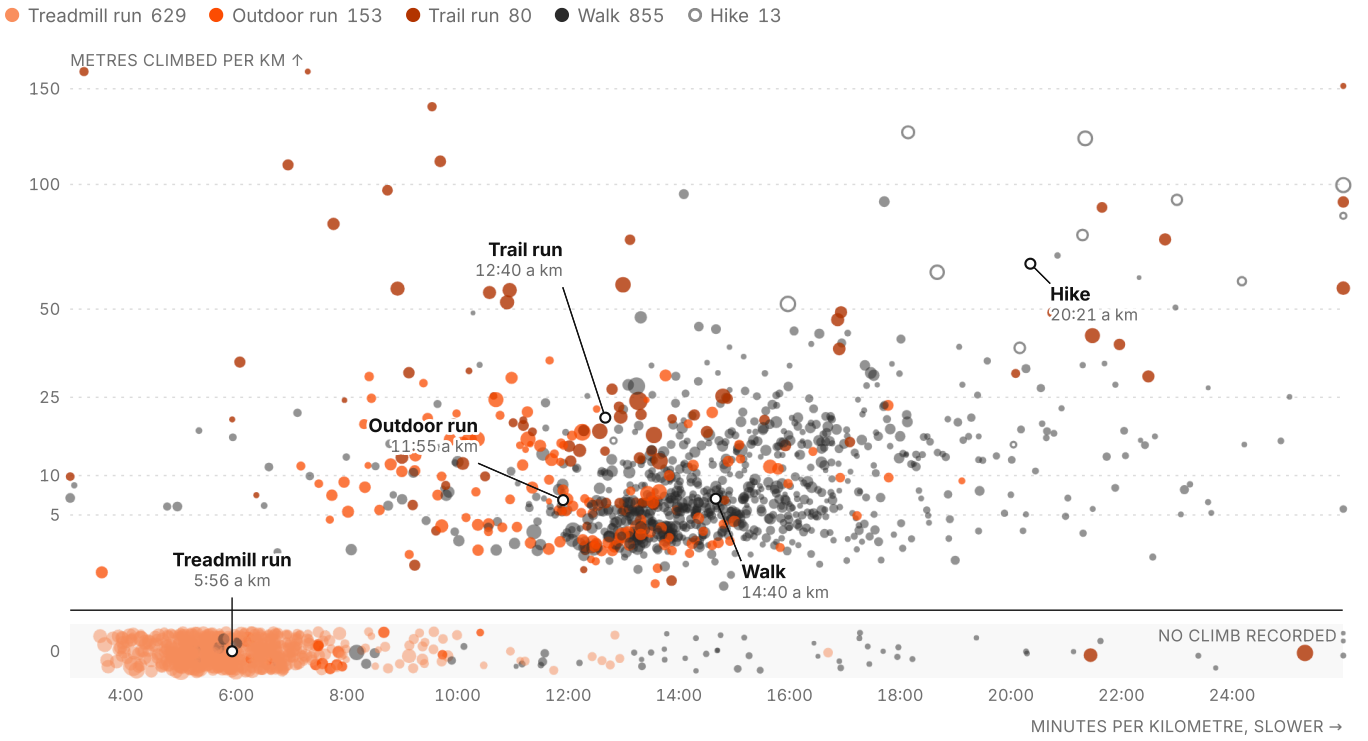

1,730
outings on foot, of 2,061 in all

2,105 h
moving on foot

Every outing on foot. The quicker ones are on the left and the hillier ones near the top.

Source: Activity Log · every run, walk, trail run and hike, placed by pace and by climb per kilometre

Walks took more hours.

I have done about as many runs as walks, and I spent about the same hours on each. But a run takes me further, about 10.1 km against 4.0 km for a walk. For climbing, the small sports matter most. Trail runs are only 5% of my outings but 33% of my climbing, and my 13 hikes add another 11%.

EACH SPORT'S BIGGEST SHARE

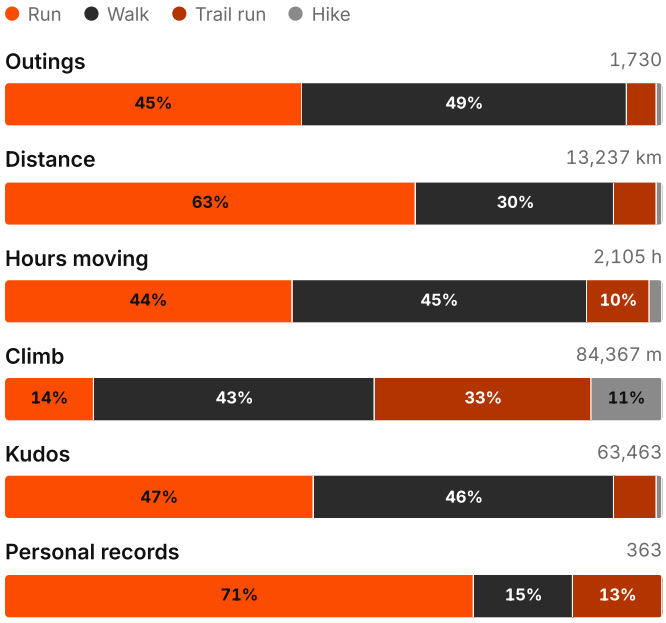

63%
of the distance was run

45%

on trails in 2023, the trail peak

KILOMETRES ON FOOT, YEAR BY YEAR

WALKING AGAINST RUNNING

2026 is not finished yet. Runs include the treadmill.

Source: Activity Log · distance on foot by sport and year

83% of running was indoors.

When I started, the treadmill was where I ran. In 2021, 95% of my running kilometres were indoors, and 2026 was the first year below half, at 45%. The treadmill shows in my numbers too. On it I tend to stop when the screen shows a round number, so 45% of my treadmill runs end within 100 m of 5, 10, 15, 20 km and so on.

Source: Activity Log · Strava relative effort (heart rate), kudos and personal records

Longer runs, quicker km.

On the treadmill, my longer runs were quicker per kilometre. My usual 5 km went at 6:28 a km and my usual 21 km at 5:18. Running and walking did not take time from each other. From week to week there was almost no link between them, so a big running week did not mean less walking.

CHAPTER 4

04 Records

My longest, highest and hardest days

My longest, my highest and my biggest. These are only my own records, measured against myself.

THE DISTANCE RECORD

The record broke 14 times.

Every time I go out on foot, I am up against my own longest outing. The first record was a 5.1 km treadmill run, on my first day on foot. Then it moved quickly: 10 km the next day, a half marathon in December 2019, 30 km in August 2021 and 42.7 km on a treadmill on 1 May 2022. Since then I have not gone further. The closest was 34.8 km, on a trail run.

THE LONGEST OUTING ON FOOT

Source: Activity Log and Strava GPS start points · Natural Earth region outlines

The climbing is in two regions.

The places where I go out most are flat. In Dodoma I climbed about 6.5 m for every kilometre, and in Dar es Salaam 3.5 m. In Morogoro it was 49 m and in Kilimanjaro it was 21 m. That is where 64 of my trail runs and hikes started.

METRES CLIMBED FOR EACH KILOMETRE

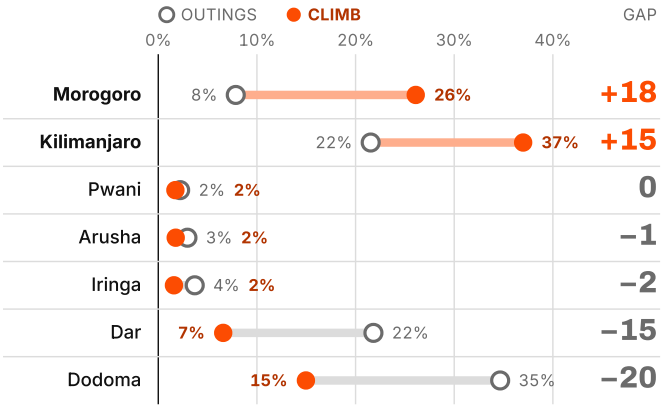

49 m
per km in Morogoro

21 m
per km in Kilimanjaro

The four busiest regions have their own colour.

REGIONS VISITED EACH YEAR

The years with the most regions are in orange.

Source: Activity Log and Strava GPS start points · outings in Tanzania by region and year

17 regions in 7 years.

New regions came when I travelled. In 2019 I added Manyara, Dar es Salaam and Arusha. In 2021 I added Kilimanjaro, Dodoma, Morogoro, Mwanza and Pwani. In 2022 I added Zanzibar Urban/West, Mara, Iringa and Mbeya. In 2023 I added Tanga and Zanzibar Central/South. In 2026 I added Rukwa, Njombe and Singida. Thirteen of Tanzania's 30 regions are still empty on my map, so there is still a lot to see.

73 outings outside Tanzania.

My trips outside Tanzania were short. My first outing abroad was in Kenya, in July 2020, and I have been back a few times since. In Malawi I logged 23 outings over 19 days, between Oct 2024 and Dec 2024. In South Africa I had 13 outings in 8 days. The other three I count as others.

The maps above only show outings that went outside, so most of my treadmill years are missing from them.

Source: Activity Log · outings without a GPS start point

How widely they spread.

I wanted one number for how spread out my outings were across Tanzania. I used the effective number of regions. If a year counts as four, it is as if my outings were shared equally between four regions. My narrowest year was 2021, about 2.2, when Dodoma had 65% of my outings. The widest was 2023, about 4.5.

CHAPTER 6

06 Timeline

From my first upload to now

Everything in the order it happened, on one chart, and then year by year.

AUG 2019 TO OCT 2026

No long gap since then.

My log starts on 17 Aug 2019. I logged 62 outings in the first few months, and then I stopped, from July 2020 to June 2021. Since I started again, the longest break between two outings has been ten days, and I have now gone out 301 days in a row.

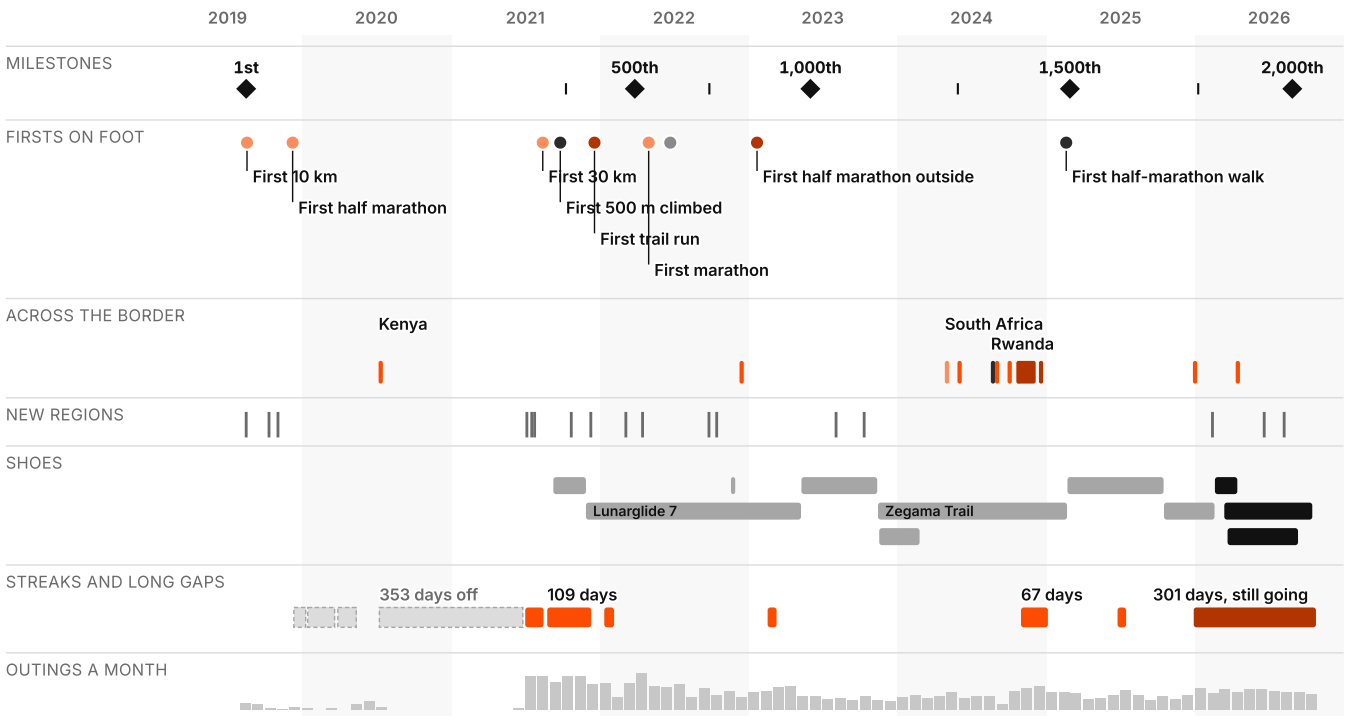

THE RECORD IN TIME

2,627 days
from the first outing to the latest

2,061
outings in that time

353 days
the silence, Jul 2020 to Jun 2021

10 days
the longest break since

▬ 20 days or more in a row ▭ 30 days or more without an outing

Source: Activity Log, Strava GPS start points and the shoe list · every dated moment in the record

The first 250 took 785 days.

My 250th outing came 785 days after the first, because the long gap falls in that stretch. Since then every 250 has taken less than a year, between 169 and 362 days. My breaks got shorter too. In 2020 the longest was 353 days. In 2026 so far there has been no break at all.

EVERY 250 OUTINGS

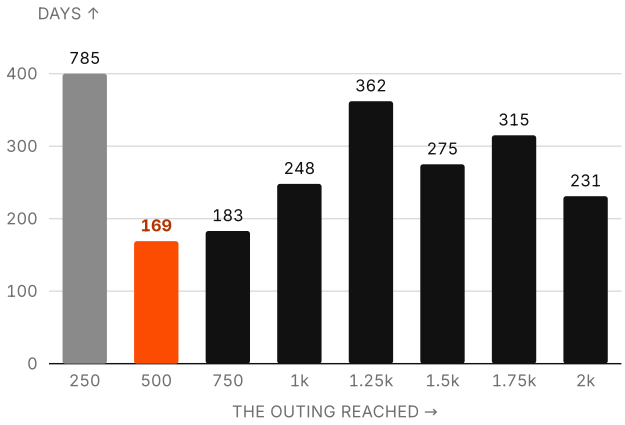

785 days

FROM THE LOGBOOK

“Ease is a greater threat to progress than hardship.”

DENZEL WASHINGTON

CHAPTER 7

07 Goals

What I aim for each year

The targets I set myself every year, and a few others I did not plan.

THREE TARGETS, EVERY YEAR SINCE 2021

Both 1,000 km rings closed.

Every year I aim for the same three things: 1,000 km walking, 1,000 km running and 24,000 m of climbing on foot. Running I have reached four times. Walking only once, on 10 Sep 2026. The climbing I have never reached. My best was 2023, with 21,490 m. With 67 days of 2026 left, I still need 4,752 m.

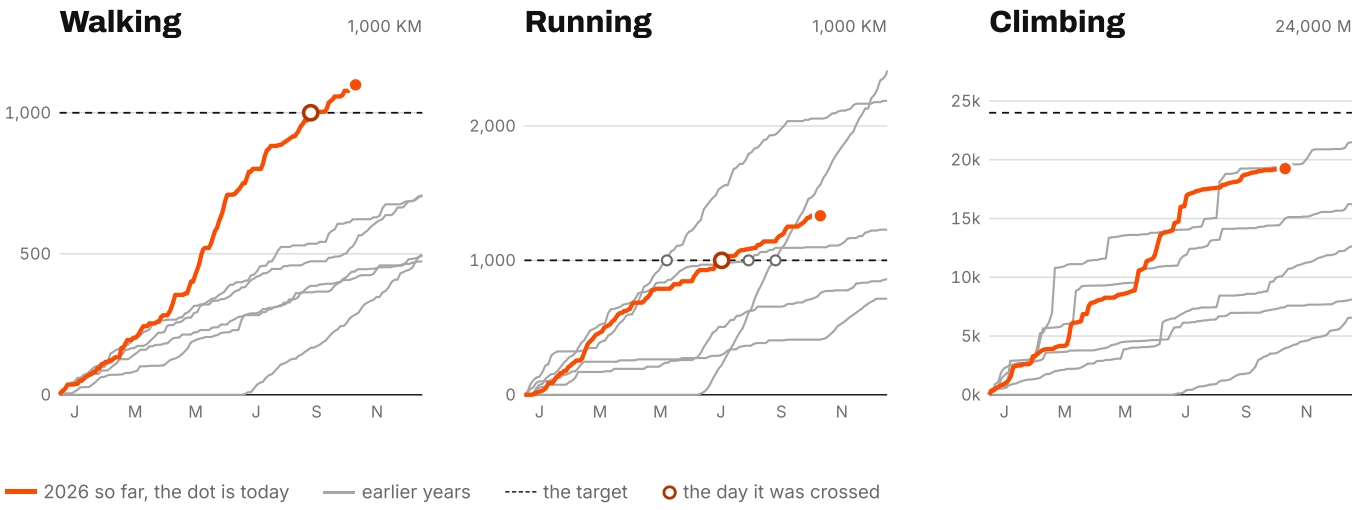

2026 SO FAR

1,099 km
walked, 110% of the target

1,331 km
run, 133% of the target

19,248 m
climbed on foot, 80% of the target

67 days
left in 2026

Source: Activity Log · daily totals on foot, running total through each calendar year

Running closed four times.

In my best running year, 2021, I ran 2,412 km, about 2.4 times the target. In 2024 and 2025 I did not make it. My walking stayed under 800 km a year until 2026. The climbing came closest in 2023, at 90%.

RINGS CLOSED, 2021 TO 2026

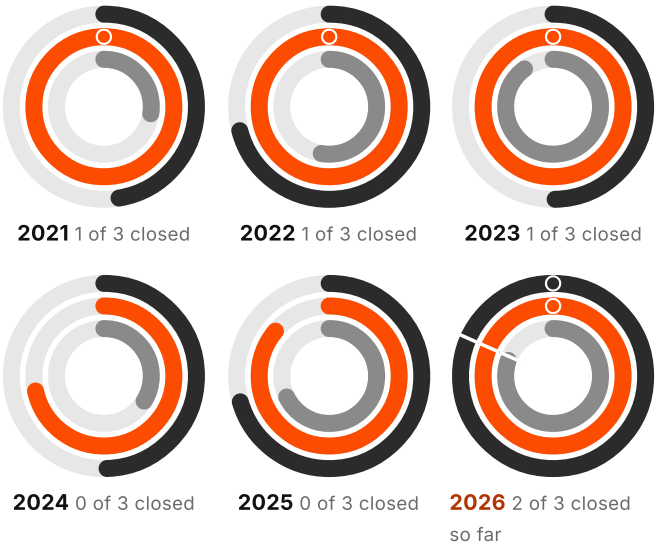

4
running, best 2,412 km in 2021

1
walking, best 1,099 km in 2026

0
climbing, best 21,490 m in 2023

1
years with both 1,000 km rings closed

EACH YEAR AS THREE RINGS

2021 1 of 3 closed

2022 1 of 3 closed

2023 1 of 3 closed

2024 0 of 3 closed

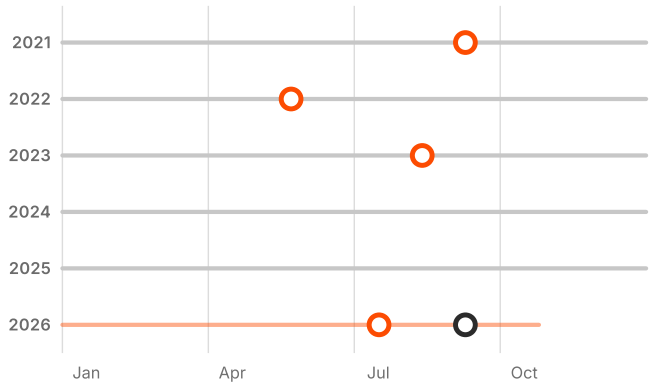

2025 0 of 3 closed

2026 2 of 3 closed so far

● outer ring, walking 1,000 km ● middle ring, running 1,000 km
● inner ring, climbing 24,000 m

A full ring means I hit that target. On 2026, the white notch is where the year is today.

THE DAY EACH RING CLOSED

The further left a ring sits, the earlier in the year I got there.

Source: Activity Log · yearly totals on foot against the three fixed targets

Climbing: a 33% chance.

To reach it I need about 71 m a day for the last 67 days. So far this year I have averaged 65 m a day, so if I keep to my average I will finish just short. I played out the rest of the year 4,000 times, using my own days of 2026 picked at random, and it got there 33% of the time. What worries me is my recent pace. Since 1 August I have climbed only 22 m a day.

THE CLIMB, 2026

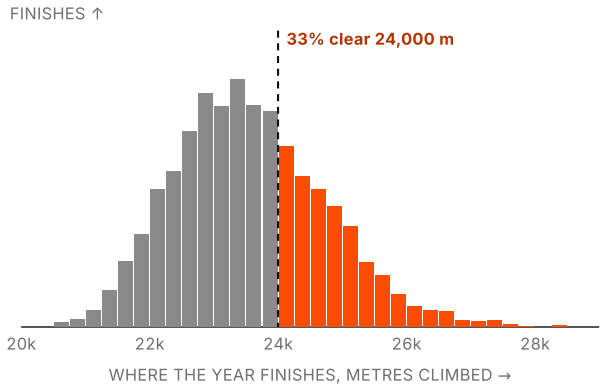

4,752 m
still to climb in 67 days

71 m
a day needed from here

65 m

Source: Kilimanjaro Half table and course profile · moving pace per half kilometre, elapsed and moving time per edition

Fifty trips to Ras Kilomoni.

Bandu bandu huisha gogo, chip by chip finishes the log. In 2026 I set myself a different kind of target: to reach the headland at Ras Kilomoni fifty times. I counted the trips in Roman numerals, I to L. It took me from 9 Mar 2026 to 28 Aug 2026, 34 walks and 16 runs, 535 km in all. The last one, L, was also my 2,000th outing.

KERSTIE ENNIS

V

The lessons

What I think seven years of logging have taught me.

CHAPTER 8

08 What It Means

What I have learned from it

What seven years of logging have taught me. I am not an expert. These are only my own lessons, from my own numbers.

SEVEN YEARS, READ BACK

71 minutes a day.

If you ask me what this has cost, I will say time. Since 2021 I have given it about 71 minutes a day, counting the rest days too. All together it is 2,382 hours since my first upload, about 99 days and nights. This year it is 106 minutes a day. These are the lessons I took from that time.

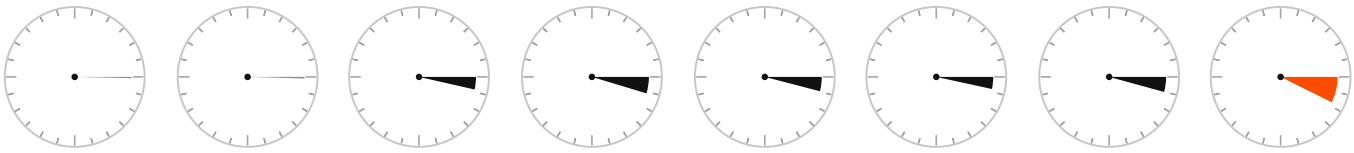

WHAT IT COST

2,382 hours
on the move since the first upload

99 days
if those hours ran end to end

71 min
a day since 2021, rest days included

106 min

106 min
2026 SO FAR

Each circle is a whole day. The wedge is how much of it I spent on the move, rest days included.

Source: Activity Log · moving time of every activity, spread over every calendar day

Keep the days.

2022 was my biggest year for distance, 2,907 km. By 2024 I was down to 1,214 km. The long days were the first to go, from 37 to four. But my days out hardly changed, 266 to 234. If I could keep only one thing, I would keep the days. When the distance came back in 2026, the days were already there to build on.

2022 AGAINST 2024

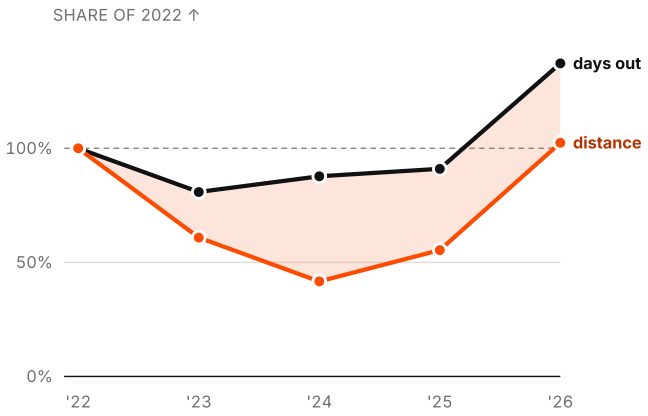

58%

298 of 298
days out in 2026 so far

DAYS OUT AND DISTANCE, AGAINST 2022

Both lines start level in 2022. The black line is how often I went out, the orange one how far.

DAYS OF 21 KM OR MORE ON FOOT

Source: Activity Log · days with any activity, and distance on foot, per calendar year

The small days count.

Haba na haba hujaza kibaba, little by little fills the measure. Many of my days were small ones, less than 2 km on foot, 246 of them since 2021. They add almost nothing to my distance, but I logged them all the same. Later the numbers showed me why they matter. After a small day, I went out again the next day 76% of the time. After a full rest day, it was only 50%. On a bad day, I try to do a small version.

SMALL DAYS SINCE 2021

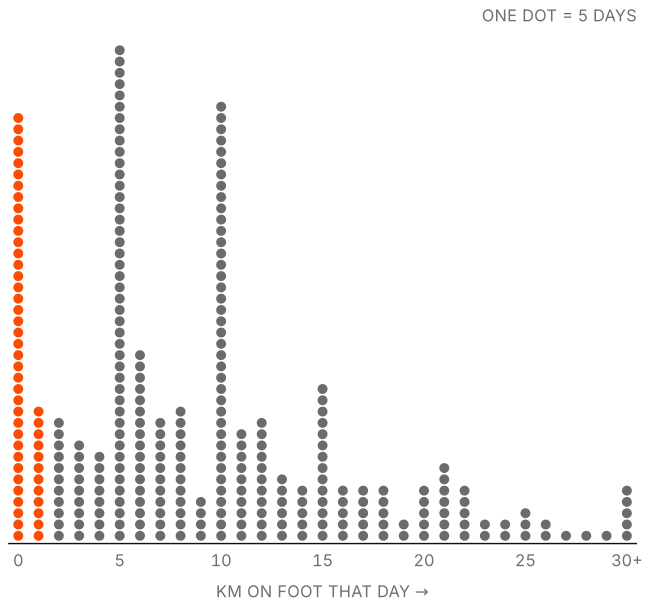

246 days
under 2 km on foot

17%
of all my days out

76%
out again the next day

EVERY FULL WEEK, BY ITS DISTANCE

WEEKS UNDER 10 KM EACH YEAR

The grey strip on the left is weeks under 10 km.

Source: Activity Log · distance on foot per full week since the habit began

Long days come in bunches.

My long days, 21 km or more, do not come alone. The day after one, I usually go out again, and that day averages 13.2 km, about double a normal day. The days before are bigger too. So for me the long days come in the middle of a busy time.

DAYS OF 21 KM OR MORE SINCE 2021

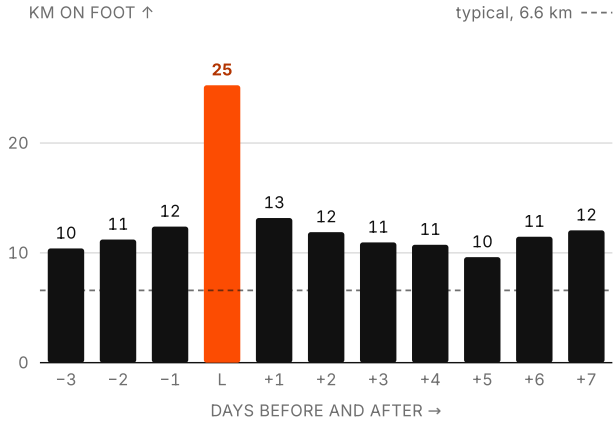

120 days
of 21 km or more on foot

90%
followed by another day out

WHAT CAME THE DAY AFTER A 15 KM RUN

What I did the day after each run of 15 km or more.

Source: Activity Log · days of 21 km or more on foot and runs of 15 km or more since the habit began

How a year adds up.

A year's total is just two things: how often I go out, and how far I go each time. 1,000 km is 2.7 km a day if you go every day, or 4.1 km if you go two days in three. 2021 was a year of long days, 16 km each time, on 49% of days. 2026 is a year of going every day, about 8 km each time. 2024 was low on both, and it ended at 1,214 km.

THE TWO LEVERS

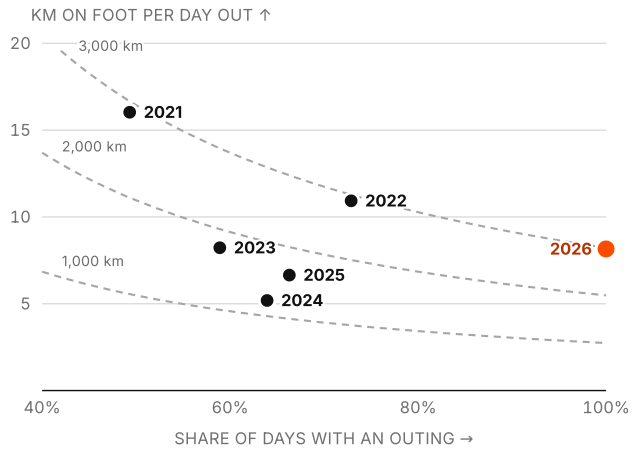

2.7 km
a day makes 1,000 km a year

16.0 km
per day out in 2021, the longest

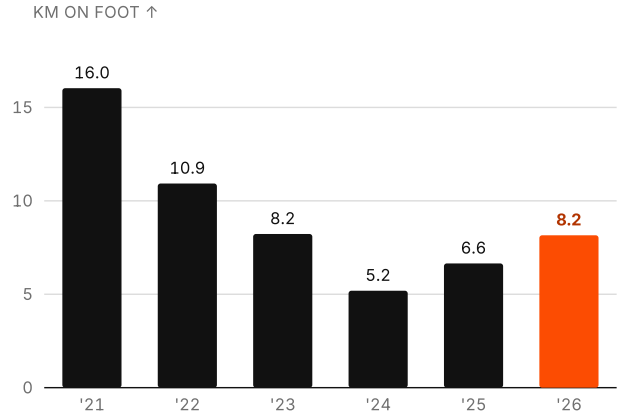

100%
of days out in 2026 so far

1,214 km

Source: Activity Log · days with any activity and distance on foot per calendar year

If you are starting out.

Four things I would pass on.

COUNT THE DAYS

234 days

out in 2024, my lowest year for distance

12% FEWER THAN 2022

DO THE SMALL VERSION

246 days

under 2 km that kept the habit going

76% OUT AGAIN THE NEXT DAY

KEEP A FLOOR

20 km

my lowest week of 2026

NO WEEK UNDER IT

LONG DAYS TOGETHER

13.2 km

the day after a long day, on average

A TYPICAL DAY IS 6.6 KM

That is what seven years of logging say to me. Nothing here is special. It is about an hour a day, a small version on the bad days, not letting a week get too thin, and long days in the middle of busy weeks. There are 67 days of 2026 left. *Kesho tena*, tomorrow again.

Source: Activity Log · every activity since the first upload

FROM THE LOGBOOK

“Break the long challenges into increments, things you can do right now that add up over time.”

DAN CNOSSEN

Epilogue

The last activity in this edition is from 25 October 2026. I am on 301 days in a row, and the habit that started in 2021 has now lasted 1,947 days.

None of these totals came from one big effort. They came from 2,061 ordinary outings, most of them short, early in the morning or in the evening, on days like any other. The log will keep growing, and the next edition will have the new numbers.

I will be out tomorrow.

Gerald Tesha

ANNEX A

How this book was made

This book started as a website, My Strava Journey, where I laid out my Strava history so anyone could read it. None of the figures are typed in by hand. They are all worked out from my activity log, which I refresh every week.

Each week I pull my latest activities from Strava through an MCP server. MCP, the Model Context Protocol, is an open standard that lets an AI assistant connect to other tools and data. Here it connects to my Strava account and gives back every activity in one raw CSV file.

A set of Python scripts then rebuilds everything from that file: the activity log, the totals on foot, the places, the streaks, the records and the tables behind each chart. Before anything is published, activity names, Strava IDs and exact GPS points are taken out. Then the checks run and the site goes live with the new numbers. This edition has 2,061 activities, up to 25 October 2026.

I built it with Claude, Anthropic's AI model, helping with the code and the analysis. I decided the questions, the design and how it should read. Claude wrote the code, dug through the data and checked each number against the log before it went into the text.

DATA SOURCE	My Strava activity history, pulled weekly through an MCP server
PIPELINE	Python, standard library only: rebuild, foot-only totals, derived tables, privacy pass
DATA STORE	32 CSV tables that every number comes from
SITE	React 18 and Vite 5, React Router with hash links, PapaParse to read the CSVs
CHARTS	Drawn by hand in SVG and canvas, without a chart library
TYPE AND COLOUR	Archivo and Inter on a simple grid, with Strava orange kept for the data
QUALITY	Data validation, tests, an axe accessibility audit and layout checks at phone widths
HOSTING	GitHub Pages, from the repository github.com/hpgerald/my-strava-journey
BOOK	The site printed through headless Chromium to an A4 PDF

The weekly pipeline

01 Strava
Every outing I record lands in my Strava account.

02 MCP pull
Each week the latest activities come out through an MCP server, as one raw CSV.

03 Build
Python scripts rebuild the activity log and every table derived from it.

04 Privacy
Names, Strava IDs and exact GPS points are removed, and places are kept to country and region.

05 Checks
The data rules, tests, accessibility and phone layouts are checked.

06 Site
The site reads the tables in the browser and draws every chart from them.

07 Book
The same pages print as this book, and I make a new PDF with each refresh.

ANNEX B

About the data

Where the numbers come from

Every activity comes from my Strava export: the date and time, sport, distance, moving and elapsed time, climb, heart-rate effort, kudos and personal records. Places come from each activity's GPS start point, kept only to country and region.

Distance and climb only count the four sports on foot: runs, walks, trail runs and hikes. Everything else counts as other activities. Those still count as outings and days out, but they add no distance or climb, and I do not name them.

A treadmill run is one that Strava marks as done indoors. Those have no GPS, so they never show up on a map and set almost no segment records.

Relative Effort	Strava's score for how hard a session was, based on the time spent in each heart-rate zone. The higher it is, the harder my heart worked.
Kudos	A thumbs-up from someone on Strava, the same idea as a like.
PR	Personal record: my best time on a segment or over a set distance.
Achievement	A badge Strava gives on a segment, for a top-10 time or a personal best.
Elevation gain	All the metres climbed in an activity, added up over every uphill stretch.
Moving time	The time I was actually moving, with the pauses taken out. Elapsed time includes the stops.
Trainer	An indoor session, like a treadmill run, as marked by Strava. These have no GPS.

THE AUTHOR

Get in touch.

I am Gerald Tesha. I work in monitoring, evaluation and data, and this book is what I did with my own numbers. If you would like something like this made from your own data, or would like to work together, I will be happy to hear from you.
