DAYS IN A ROW

MY STRAVA JOURNEY

Showing Up

Seven years on foot, told by my own data

Gerald Tesha

This edition covers every activity I logged on Strava from 17 August 2019 to 25 October 2026: 2,061 of them.

Every number in this book comes from that log, and every chart is drawn from it. Distance and climb only count my four sports on foot: runs, walks, trail runs and hikes. I took out activity names and exact locations before publishing.

The book is my website, My Strava Journey, put together as one volume. The site redraws everything from the data each time it's opened, and I print a new PDF whenever the data is refreshed, so each edition matches the site on the day it was made.

Annex A explains how I made it, and my contact details are on the page before the back cover.

ANNEX B About the data

Get in touch

Prologue

I uploaded my first activity on 17 August 2019. Over the next months I logged 62 outings, most of them runs on a treadmill. Then I stopped for 353 days, from July 2020 to June 2021.

When I started again, I didn't stop. Since June 2021 I've been out on 1,435 of 1,947 days, and my longest break has been ten days. As I finish this edition, I'm on 301 days in a row.

This book is me going back through that record. It's made from 2,061 activities and nothing else: 13,237 km on foot, 84,367 metres of climbing and 2,382 hours on the move, in 5 countries and 17 regions of Tanzania. Every number comes from my Strava log. When the log can't tell me why something happened, I say so rather than guess.

There are five parts. The first looks at the habit as a whole, and the second goes through it year by year. The third is about my sports, my records and the places I went. The fourth has the timeline and my goals, and the last part is what I think it all means.

The habit

The whole record at once: how often I go out, when, where, and what I do.

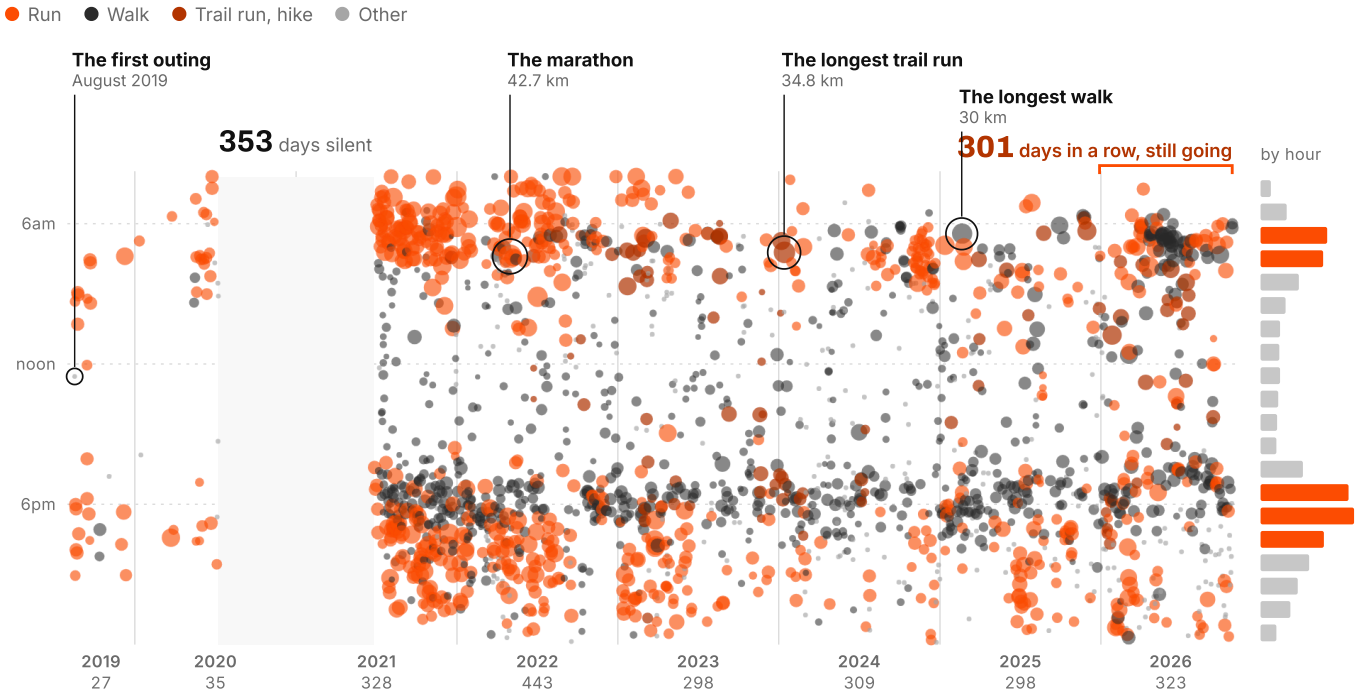

CHAPTER 1

01 The Journey

Seven years of one habit

The whole habit at once: how the streak keeps going, how my distance is spread over my days, how my days are shaped, and six more things I found in the data.

Every outing since August 2019, one dot each. Across is time, down is the hour it started, size is the distance on foot.

2,061
ACTIVITIES
on 1,485 separate days

13,237 km
ON FOOT
a third of the way around the Earth

84,367 m
CLIMBED
nine and a half times up Everest

301 days
CURRENT STREAK
unbroken, and still going

Most of my days out are small ones. A usual outing for me is about 6 km and takes around an hour, a walk or an easy run. It's how often I go that adds up. Over 7 years I've been out on 57% of all days, and right now I'm on a run of 301 days in a row.

OPEN A YEAR

2019 →

The quiet start

63% of my outings were on a Saturday or Sunday, the most of any year, and 85% were runs.

2020 →

The false start

69% of my outings began before 10 in the morning, the most of any year. Then I stopped logging.

2021 →

The switch

On 57% of my active days I went out more than once, the most of any year.

2022 →

The peak

Lots of short outings. The average one lasted 56 minutes, the shortest of any year.

2023 →

The climb

I climbed 12 m for every km on foot, my steepest year, and ran 303 km on trails.

2024 →

The travel year

I went out in 5 countries, and half my outings were done in under 35 minutes.

2025 →

The long walk

Walks were 47% of my outings, the most of any year, and I did my longest walk, 30 km.

2026 →

Unbroken

Usually one outing a day, and a longer one, 98 minutes on average. Only 8% of days had two.

One day leads to the next.

The more days in a row I have behind me, the more likely I am to go out again.

When I've been out today, there's an 82% chance I'll go out tomorrow. After a week in a row that goes up to 95%, and after three weeks it's 99%. Stopping works the other way. After five days off, the chance I go out the next day is down to 33%. Seeing it counted out like this, keeping a streak going really is easier than starting one.

CHANCE THE NEXT DAY IS ACTIVE

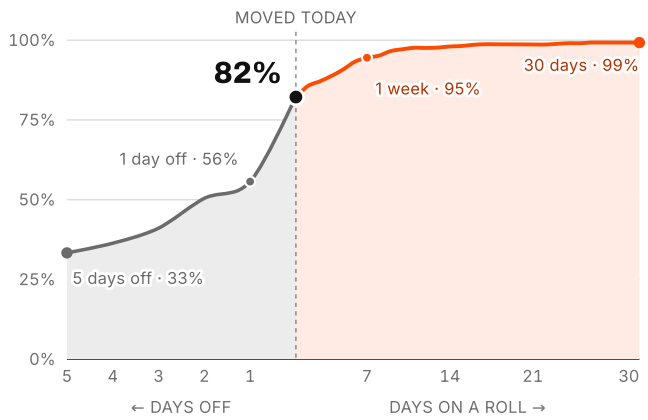

33%
after five days off

56%
after one day off

82%
after a day out

95%
after a week on a roll

THE ODDS, DAY BY DAY

The dashed line is a day I went out. Moving right is one more day in a row, and moving left is one more day off. The orange line climbs and levels off near 99%. The grey line falls quickly, and one day off is already enough to bring it down to 56%.

GIVEN TODAY, THE CHANCE OF TOMORROW

	TOMORROW YOU MOVE	TOMORROW YOU REST
If you moved today	82%	18%
If you rested today	50%	50%

Each row adds up to 100%. If those two numbers, 82% after a day out and 50% after a day off, held for good, about 74% of my days would be active. Since 2021, 74% of them have been. Before the habit set in, a day out led to another only 35% of the time.

Source: Activity Log · every day marked active or rest, measured since the habit caught in 2021

BIG DAYS AND SMALL DAYS

The long days carry a lot.

My busiest tenth of days carry 25% of the distance.

If I line up all 1,316 of my days on foot from shortest to longest, the top tenth, every day over 20 km, carries 25% of my 13,237 km. That's about the same as my quieter half of days put together. Still, no single big day changes much on its own. My 13 biggest days add up to under 4%.

SHARE OF ALL DISTANCE ON FOOT

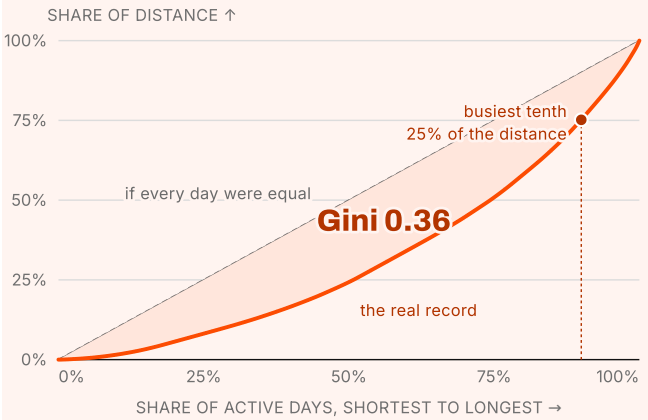

24%
the quietest half of days

42%
the busiest fifth of days

25%
the busiest tenth of days

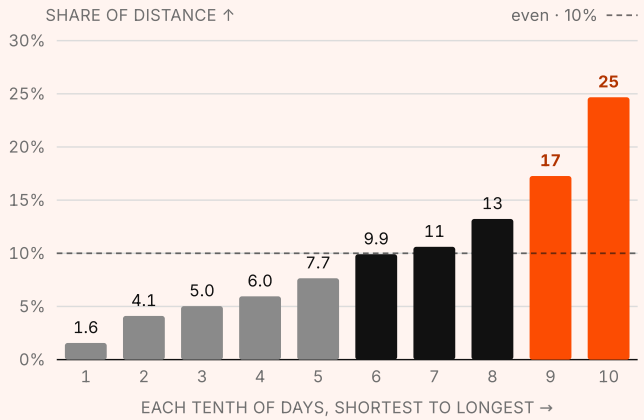

4%
the 13 biggest days

EVERY DAY, ADDED UP

My days run left to right from shortest to longest, and the line adds up their distance as it goes. If every day were the same length, the line would follow the dashed diagonal. The gap between the two is measured by the Gini coefficient, where 0 means every day was equal and 1 means one day did everything. Mine is 0.36.

EACH TENTH OF DAYS, BY ITS SHARE

If every day were equal, each tenth would carry 10%. My shortest tenth carries 1.6% and my longest 24.7%. Days of 10 km or more are 635 of the 1,316, under half, and they carry 74% of the distance. Most of my kilometres come from the longer days, and the short ones fill the gaps in between.

Source: Activity Log · daily distance on foot (run, walk, trail run, hike), 1,316 days

Same time, fewer outings.

I still spend about the same time out each day, but now it's usually in one go.

On a day when I'm out, I move for somewhere between 79 and 106 minutes, and that's been true every year. In 2021, 57% of my active days had two or more outings, and an average outing lasted 58 minutes. In 2026 I mostly go out once a day. Only 8% of days have a second outing, and the average one lasts 98 minutes.

HOW THE DAYS WERE SPLIT

of active days doubled up in 2021

8%
of active days doubled up in 2026

58 min
the average outing in 2021

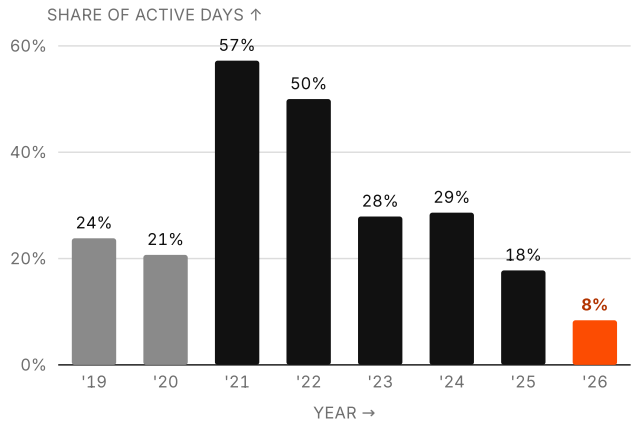

98 min
the average outing in 2026

A TYPICAL ACTIVE DAY, YEAR BY YEAR

Each row is a year. The bar shows the minutes I moved on an average active day, and each block inside it is one average outing. Several short blocks mean I often went out twice. One long block means one long outing.

DAYS WITH TWO OR MORE OUTINGS

The time I give it each day hasn't moved much since the start. I used to split it into two shorter outings, and now I tend to do one longer one.

Source: Activity Log · moving time and outings per active day, by year

The climbing is in two regions.

Two regions hold 63% of the metres I've climbed in Tanzania.

Of my 1,155 outings with a GPS start point, 1,082 began in Tanzania, which is 94%. Another 70 were in Kenya, Malawi, South Africa and Rwanda, and the last 3 count as others. Inside Tanzania I go out most in Dodoma, but that's not where I climb. Kilimanjaro and Morogoro have 29% of my outings there and 63% of the metres.

WHERE THE OUTINGS HAPPEN

94%
of located outings are in Tanzania

6%
outside Tanzania

29%
of Tanzania's outings are in Kilimanjaro and Morogoro

63%
of Tanzania's climbing is there

HOME AGAINST AWAY

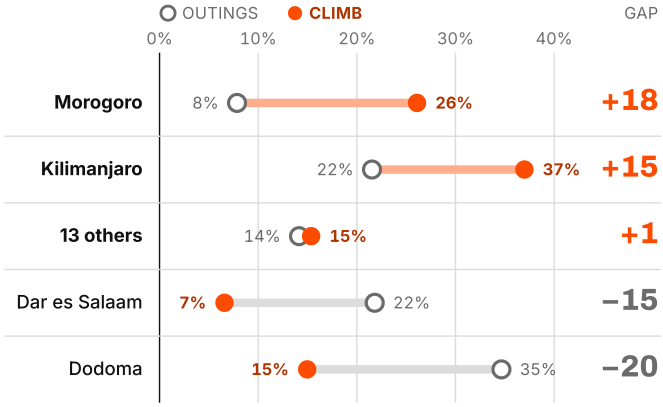

Tanzania · 1,082 outings

OUTSIDE TANZANIA · 73 OUTINGS

Kenya	32	2020
Malawi	23	2024
South Africa	13	2024
Rwanda	2	2024
Others	3	

INSIDE TANZANIA: SHARE OF OUTINGS AND OF CLIMB

Only outings with a GPS start can go on a map. Treadmill sessions and other indoor ones can't, so 906 outings aren't in this view. The disc is Tanzania, and the list shows where else I went, with the year I first went out there.

Each row is a region. The grey ring is its share of my outings in Tanzania, the orange dot its share of the climb, and the number on the right is the difference between them. Dodoma, where I'm out most days, is fairly flat. Most of my metres come from trips to the mountains.

Source: Strava GPS start points · countries and Tanzania regions, distance and climb on foot

Walks took over.

Since 2022 I've walked more often than I've run, every year.

Of my 2,061 outings, 855 are walks and 782 are runs. Trail runs and hikes add 93 more, and the last 16% are other activities. In 2022 my walks passed my runs, and they've stayed ahead every year since.

SHARE OF ALL OUTINGS

41% walks

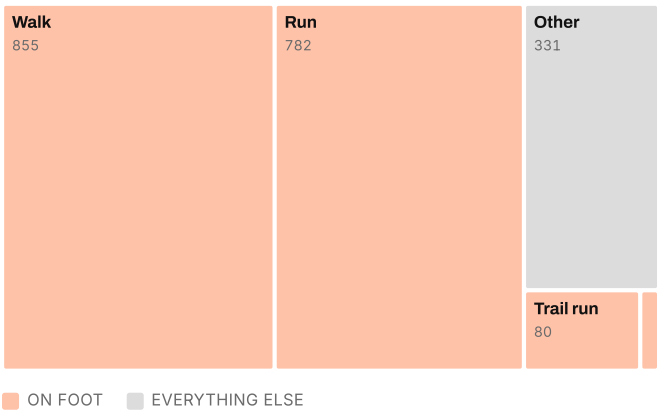

38% runs

5% trail runs and hikes

16% other activities

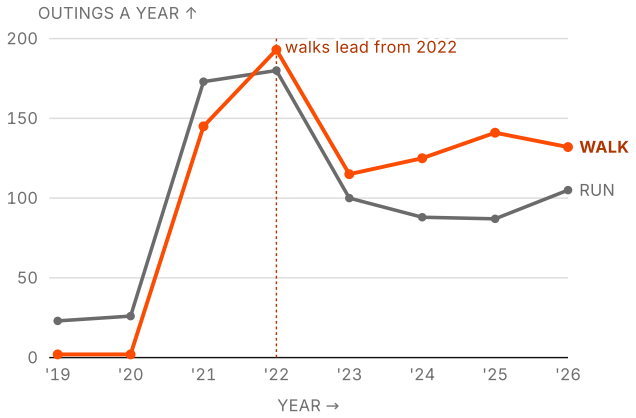

EVERY OUTING, BY SPORT

84% of all my outings are on foot.

Each tile is a sport, sized by how many outings it has. The four sports on foot have their own tiles, and everything else shares one tile marked other.

WALKS AGAINST RUNS, YEAR BY YEAR

Running was most of what I did in the first years. Once the habit set in, walking took over and it's stayed in front. Trail runs are counted on their own, so they aren't part of the run line. 2026 isn't over yet.

Source: Activity Log · outings by sport type

Mornings and evenings.

Most of my outings start early in the morning or in the evening.

When I sort my outings by the hour they started, 44% begin between 4 and 9 in the evening, and 6pm is the busiest hour. Another 31% start before 10 in the morning. The middle of the day, from 10 to 4, only has 14%. The days of the week are more even. My quietest day still has 77% as many outings as my busiest.

WHEN OUTINGS START

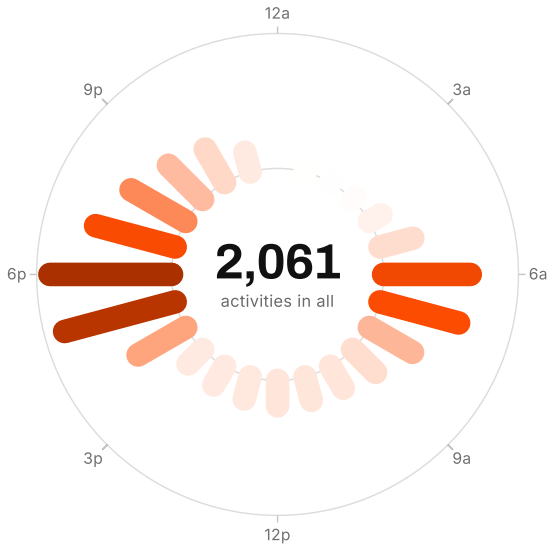

31%
before 10 in the morning

11%
after 9pm

EVERY OUTING, BY THE HOUR IT BEGAN

Midnight is at the top and the hours go round clockwise. Each spoke is an hour, and the longer and darker it is, the more outings started then. The two bulges are the early morning and the evening.

EVERY OUTING, BY DAY OF THE WEEK

Saturday is my busiest day and Tuesday my quietest, but there isn't much between them. I fit my outings around work, in the morning or the evening, whatever the day.

Source: Activity Log · start hour and weekday of every outing

Two quieter months.

August and September are my quietest months of the year.

I took my four full years since the habit started, 2022 to 2025, and counted how many days in each month I went out. Across the whole year it comes to 66%. January is my best month at 76%. August and September are the lowest, at 52% and 47%. Every other month is somewhere between 63% and 74%.

SHARE OF DAYS ACTIVE, 2022 TO 2025

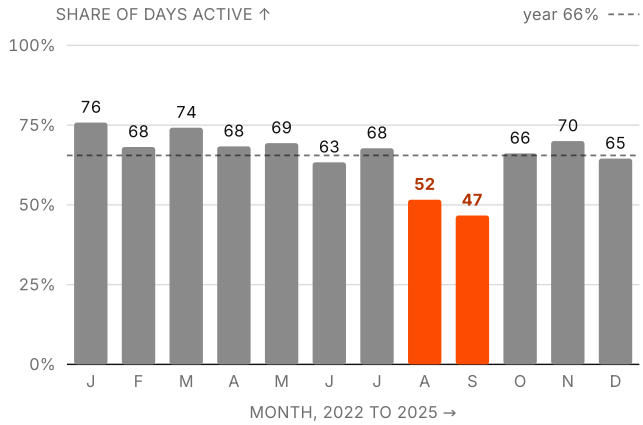

76%
in January, the strongest month

68%
in a typical month

52%
in August

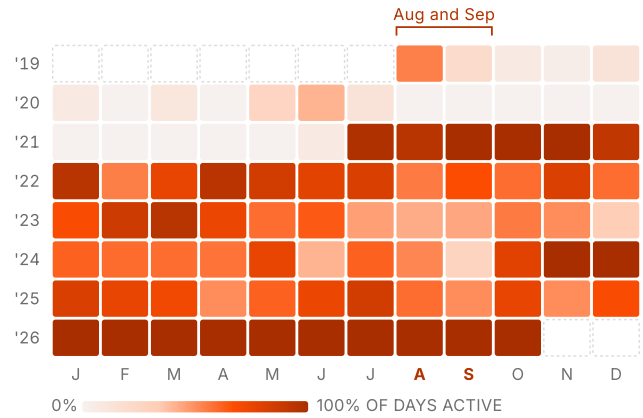

47%
in September

SHARE OF DAYS ACTIVE, BY MONTH

Each bar is the share of days in that month when I went out at least once, across the full years. The dashed line is the whole year, and the two lowest months are in orange.

EVERY MONTH OF THE RECORD

The dip shows up in every one of the four full years, with both months below that year's own average. My log doesn't tell me why, so I won't guess. In 2026 the streak has filled them in.

Source: Activity Log · days with at least one activity, by month

Less treadmill every year.

Running is the one sport I took indoors, and I do less of it there now.

In 2019, 63% of my sessions were indoors. So far in 2026 it's 16%. Nearly all of that indoor time was running. 80% of my runs were on a treadmill, compared with 2% of my walks, and of the 8,288 km I've run, 6,905 km were indoors.

SHARE OF SESSIONS INDOORS

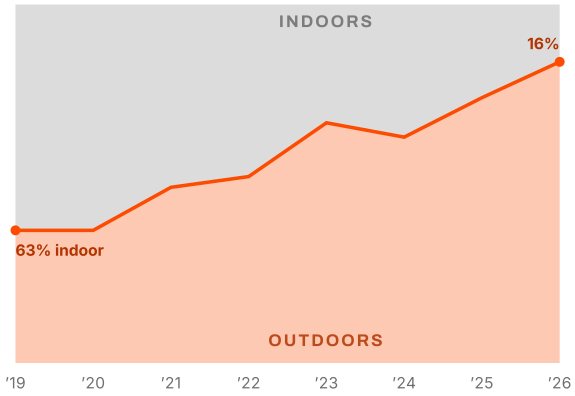

63%
of sessions in 2019

16%
of sessions in 2026

80%
of all runs

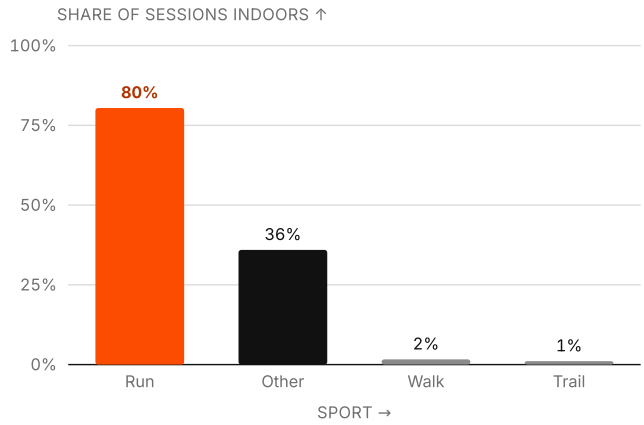

2%
of all walks

INDOORS AND OUTDOORS, YEAR BY YEAR

Each year is split into indoor and outdoor sessions, stacked to 100%. Below the orange line is outdoors and above it is indoors. Indoor means Strava marked the session as done on a machine or inside.

SHARE INDOORS, BY SPORT

My walks, trail runs and hikes nearly all happen outside. Running is the one I did indoors, so as the indoor share falls, it's mostly my running moving out onto roads and trails.

Source: Activity Log · trainer flag on each session

Where the height comes from.

Running gives me most of my kilometres and very little of my climbing.

Running is 63% of my kilometres on foot but only 14% of my climbing, because most of it is flat, on a treadmill. Walking is 30% of the kilometres and 43% of the climb. Trail runs and hikes are only 7% of the distance, yet they account for 44% of the climb.

SHARE OF DISTANCE AND CLIMB ON FOOT

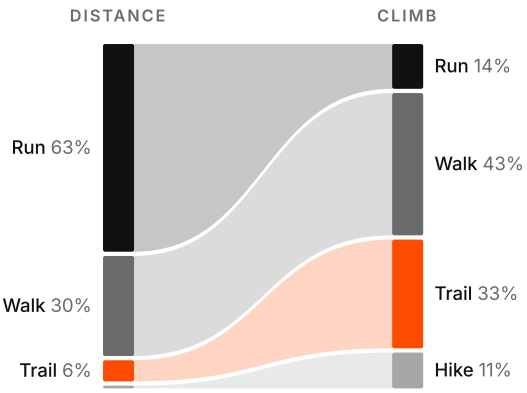

63%
of the distance is running

14%
of the climb is running

43%
of the climb is walking

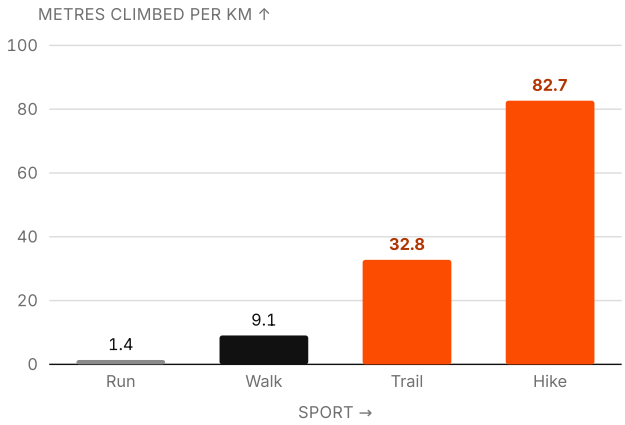

44%
of the climb is trail runs and hikes

DISTANCE AGAINST CLIMB, BY SPORT

The left column splits all my distance on foot by sport, and the right column splits all my climb. Each band joins a sport's two shares, so running starts thick on the left and ends thin on the right.

METRES CLIMBED PER KILOMETRE

For every kilometre, a hike climbs 83 m, a trail run 33 m, a walk 9 m and a run 1.4 m. Nearly all my height came slowly, uphill, at a walking pace or close to it.

Source: Activity Log · distance and climb on foot (run, walk, trail run, hike)

FROM THE LOGBOOK

"Train, train, train. And when you think you have trained enough, keep training."

CHAPTER 2

02 Year in Sport

One year at a time

Each year from 2019 to 2026 on its own: the months, the sports, the time of day, the days out, a typical outing, the biggest days and where I went.

2019

The quiet start.

This is where my log starts. I logged 27 activities that year, 23 of them runs, and most of those were on a treadmill. I covered 231 km on foot, and the most days I managed in a row was 4. It's a small year, but it's the one I measure the rest against.

2019 IN FOUR NUMBERS

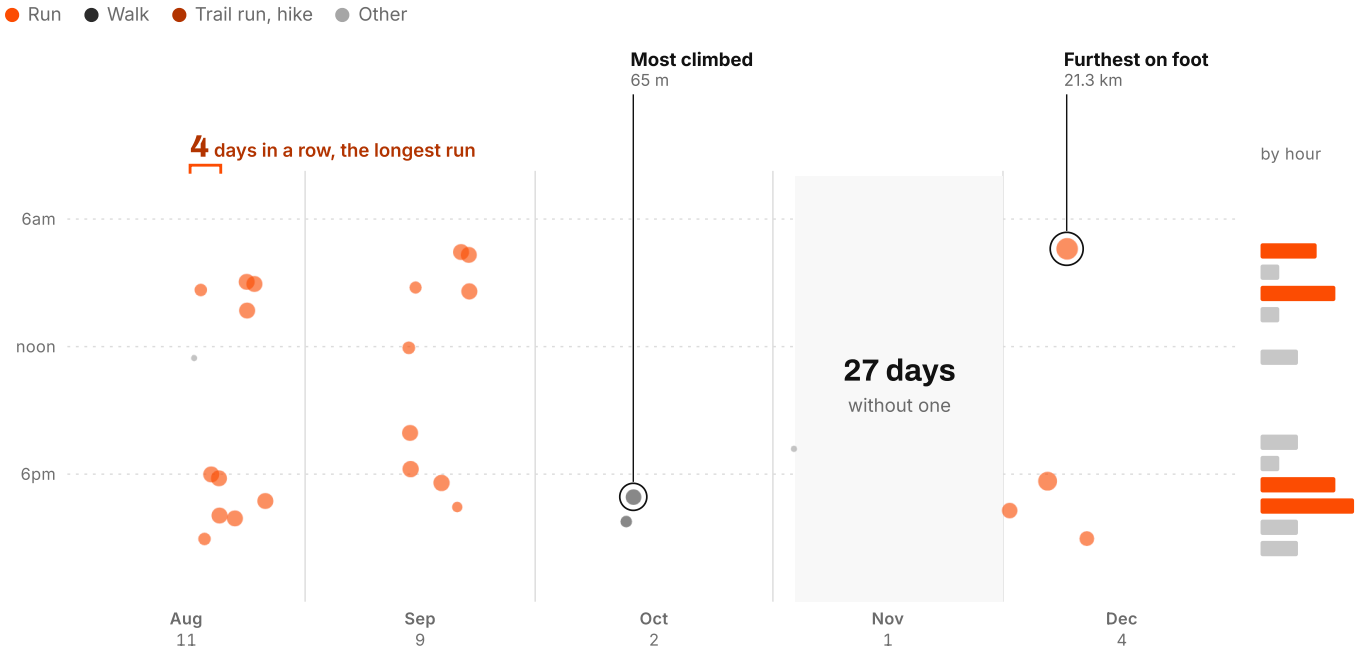

27 outings

231 km on foot

85 m climbed

33 h moving

Every outing of 2019, one dot each. Across is the year, down is the hour it started, size is the distance on foot.

CHAPTER 3

03 Sports

My four sports on foot

Every run, walk, trail run and hike I've logged, side by side: how far, how fast, how much climbing, when I go and how long the long days get. I've kept treadmill runs apart from outdoor runs, because in my log they look like two different sports.

FOUR SPORTS ON FOOT

Runs cover the ground.

Runs covered 63% of the distance, and walks, trail runs and hikes did 86% of the climbing.

Of my 2,061 outings, 1,730 were on foot: 782 runs, 855 walks, 80 trail runs and 13 hikes. Together they add up to 13,237 km and 84,367 m of climbing, over 2,105 hours of moving on 1,316 different days. 629 of my runs were on a treadmill and 153 were outside. They're so different that I count them separately on this page.

THE FOUR SPORTS ON FOOT

Source: Activity Log · every run, walk, trail run and hike, placed by pace and by climb per kilometre

1 · WHO DOES WHAT

Walks took more hours.

More hours than runs, for less distance.

I've done about as many runs as walks (782 and 855) and spent about the same hours on each (919 and 945), but a typical run goes 2.5 times as far as a typical walk, 10.1 km compared with 4.0 km. Trail runs are 5% of my outings and 33% of my climbing. My 13 hikes add another 11% of the climbing from less than 1% of the distance.

EACH SPORT'S BIGGEST SHARE

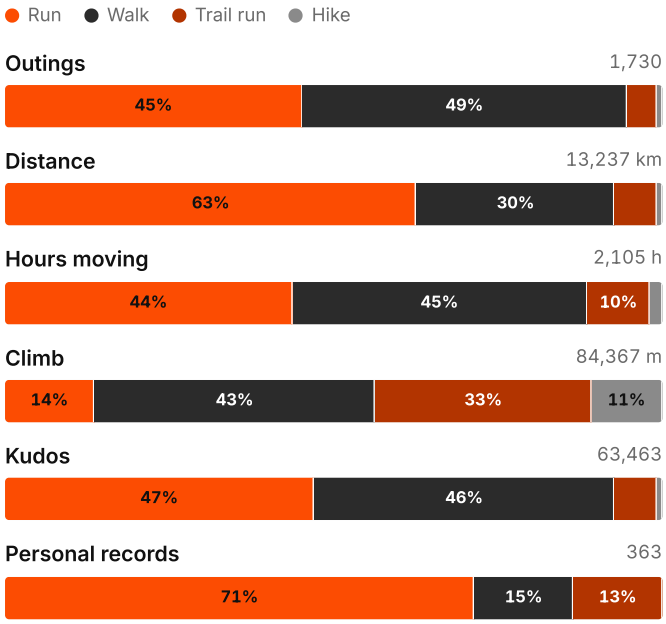

63% of the distance was run

45% of the hours were walked

33% of the climb came on trail runs

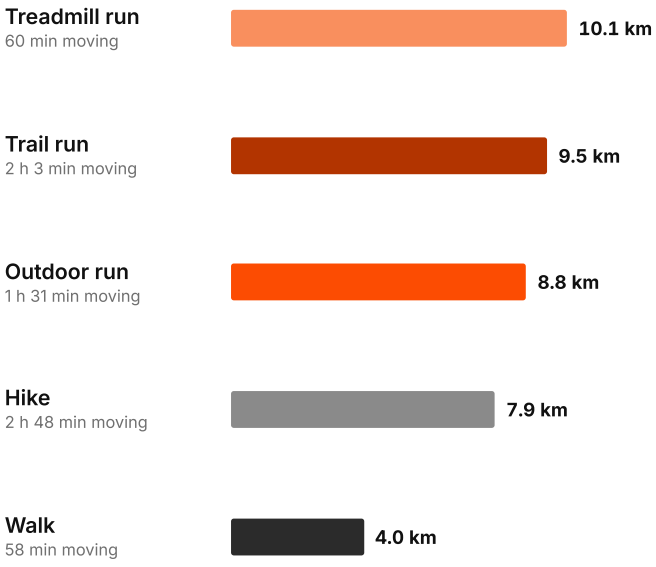

11% of the climb came on 13 hikes

EACH SPORT'S SHARE OF THE RECORD

Each bar is one measure, split into the four sports' shares of it. Follow one colour down the bars to see how that sport's share changes.

THE TYPICAL OUTING OF EACH

This is the middle outing of each sport when they're lined up by distance. My typical walk is short, even though I've done some long ones.

Source: Activity Log · runs, walks, trail runs and hikes; distance and climb on foot only

In 2026, walks went further.

For the first time, walks covered more distance than runs.

For years most of my distance was running. In 2021 I ran 2,402 km and walked 473 km. Since then my running has dropped to 1,065 km in 2026 so far, and my walking has gone up to 1,099 km, 2.3 times its 2021 total. My trail running, which I count separately, was at its highest in 2023, with 303 km.

KILOMETRES ON FOOT, YEAR BY YEAR

One column a year, split by sport, with the total on top. The star marks 2026, which isn't over yet.

WALKING AGAINST RUNNING

Runs here are outdoor and treadmill runs, and trail runs are counted separately. The dashed line is the year my walking passed my running.

Source: Activity Log · distance on foot by sport and year

83% of running was indoors.

Most of my running kilometres were on a treadmill.

629 of my 782 runs were on a treadmill, 6,905 km in all. In 2021, 95% of my running kilometres were indoors. 2026 was the first year below half, at 45%. You can spot the treadmill in the numbers, too. 45% of my treadmill runs ended within 100 m of a round 5 km, and 61% within 100 m of a round kilometre. Only 36% of my outdoor runs did.

RUNNING KILOMETRES, INDOORS AND OUT

My running kilometres each year, with the treadmill in light orange and outside in deep orange. The figure on top is the share done indoors.

WHERE THE TREADMILL STOPPED

One bar per kilometre. My treadmill runs bunch up at 5, 10, 15 and 21 km, because on a treadmill I tend to stop when the display hits a round number.

Source: Activity Log · runs marked as treadmill (trainer) against runs outdoors

Each sport has its pace.

A treadmill kilometre took 5:56. A walking one took 14:40.

Pace here means the minutes it takes me to cover a kilometre, using the middle outing of each sport: treadmill 5:56, outdoor run 11:55, trail run 12:40, walk 14:40 and hike 20:21. A typical outdoor run of mine takes 2.0 times as long per kilometre as a treadmill run, which puts it closer to a walk. My quickest year on the treadmill was 2021, at 5:05, and 2026 so far is at 5:44.

MEDIAN MINUTES PER KILOMETRE

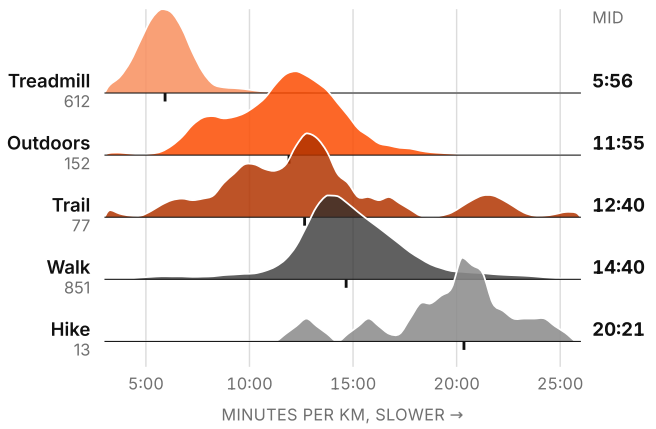

5.9 min
a treadmill km

EVERY WALK BY DISTANCE, YEAR BY YEAR

One ridge a year, and its height shows how many walks were each length. As my walks got longer, the ridge moved to the right. 2026 is in orange.

SHARE OF WALKS UNDER 3 KM

About half my walks used to be short ones. In 2026 nearly every walk is a proper outing.

Source: Activity Log · walks, indoor and outdoor

Long days moved outdoors.

They started on the treadmill. 83 outings reached a half marathon.

A half marathon is 21.1 km. Up to 2022 I did 46 outings that long, and every one of them was on a treadmill. In 2026 so far I've done 15, and 12 of them were outside: 5 outdoor runs, 3 trail runs and 4 walks. My longest ever was 42.7 km on a treadmill in May 2022, a whole marathon indoors.

HALF MARATHON OR LONGER

OUTINGS OF 21.1 KM OR MORE, YEAR BY YEAR

Each column counts that year's outings of 21.1 km or more, coloured by sport.

THE LONGEST OF EACH

Every sport except hiking has gone past 30 km at least once. My longest hike was 18.4 km, but it climbed 952 m on the way.

Source: Activity Log · outings of 21.1 km or more by way of moving

Hikes climb the most.

Hikes climbed 83 m for every kilometre. Walks climbed 9.

Here's how much I climb for each kilometre: hikes 83 m, trail runs 33 m, walks 9 m, outdoor runs 8 m and the treadmill none at all. So my walks, with 30% of the distance, did 43% of the climbing, and my eight biggest climbs were all hikes and trail runs. The biggest was 1,979 m, on a 16.1 km hike in Mar 2025.

METRES CLIMBED FOR EACH KILOMETRE

IF EACH SPORT WERE A ROAD

Each line goes across one kilometre at that sport's average slope. I've drawn the slopes steeper than they really are so the gentle ones don't all look flat, but the figures are the real ones.

THE EIGHT BIGGEST CLIMBS

My biggest single climbs, coloured by sport. None of them was a walk or an outdoor run.

Source: Activity Log · elevation gain on foot over distance on foot

Treadmill runs at night.

37% of my treadmill runs started after 8pm or before 5am.

Each sport has its own time of day. My treadmill runs are busiest at 7am and again from 7pm to midnight, and 43% of them start in that late stretch. My walks are busiest at 5pm, with 48% between 4 and 7pm. My outdoor runs start at 6am or in the late afternoon. Trail runs and hikes are mostly for the weekend. 63% of trail runs and 69% of hikes were on a Saturday or Sunday, compared with 25% of treadmill runs. If the days were even, it would be 29%.

HOURS AND DAYS

THE HOUR EACH OUTING STARTED

One ridge per sport, and its height shows how many outings started at each hour, from midnight to midnight. The tick and the figure on the right are the busiest hour.

SHARE OF EACH ON A SATURDAY OR SUNDAY

Bars past the dashed line lean towards the weekend. A trail run needs a free morning, and a treadmill run fits into whatever evening I have.

Source: Activity Log · local start hour and weekday of every outing on foot

199 run-and-walk days.

Days when I both ran and walked, usually hours apart.

On 130 of the 199 days (65%) I ran first. The typical gap between finishing one and starting the other was 6 h 28 min. Only 14 pairs were less than half an hour apart, and 89 were 8 hours or more apart, a run in the morning and a walk in the evening. Most of these days were in 2021, 87 of them, and 2026 so far has 11.

DAYS WITH BOTH

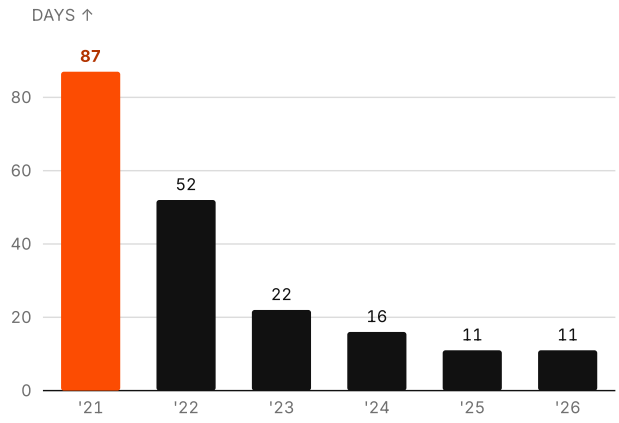

199 days
with a run and a walk

in 2021, the most

DAYS WITH A RUN AND A WALK, YEAR BY YEAR

Each bar counts the days that year with at least one run (or trail run) and at least one walk.

TIME BETWEEN THE TWO

The walk was hardly ever a cool-down after the run. Most of the time they were two separate outings at different ends of the day.

Source: Activity Log · start time and moving time of runs and walks on the same date

Treadmill runs work hardest.

Per hour, treadmill runs scored 47 on effort and walks 17.

Relative effort is Strava's score for how hard my heart worked, based on heart rate. Per hour of moving, the order is treadmill runs (47), outdoor runs (39), trail runs (26) and walks (17). I left out hikes, because too few of them have a score. The people who follow me see it differently. My trail runs got 51 kudos each, more than any other sport. My outdoor runs set 1.5 personal records per outing, and the treadmill sets almost none (0.04), because Strava's segment records need GPS.

EFFORT PER HOUR, KUDOS AND RECORDS PER OUTING

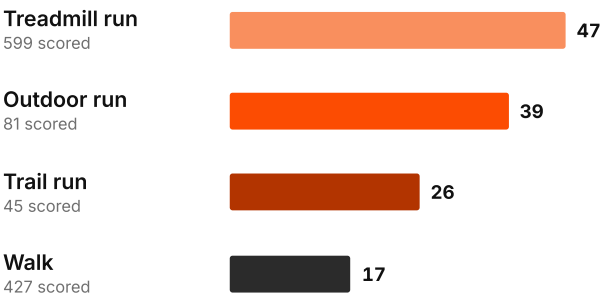

47
effort per hour, treadmill run

17
effort per hour, walk

51
kudos per trail run

1.5
personal records per outdoor run

RELATIVE EFFORT PER HOUR MOVING

All the relative effort scores for each sport added up and divided by the hours they took. The higher the bar, the harder my heart worked for each hour out.

KUDOS PER OUTING

Kudos are the likes other people give on Strava. The small figure under each sport is how many personal records it sets per outing.

Source: Activity Log · Strava relative effort (heart rate), kudos and personal records

Longer runs, quicker km.

On the treadmill, the further I run, the quicker each kilometre goes.

A correlation shows how two things move together, on a scale from −1 to 1, where 0 means no link at all. Across my 606 treadmill runs, distance against pace comes out at −0.43, a moderate link, with my longer runs going quicker. The best-fit line takes 5 seconds off each kilometre for every extra kilometre I run. My typical 5 km went at 6:28 a km and my typical 21 km at 5:18, 69 seconds quicker. Running and walking didn't compete for my time. Week by week since 2021 they come out at 0.08, close to none, so a big running week didn't mean less walking.

FOUR NUMBERS FROM THE FITS

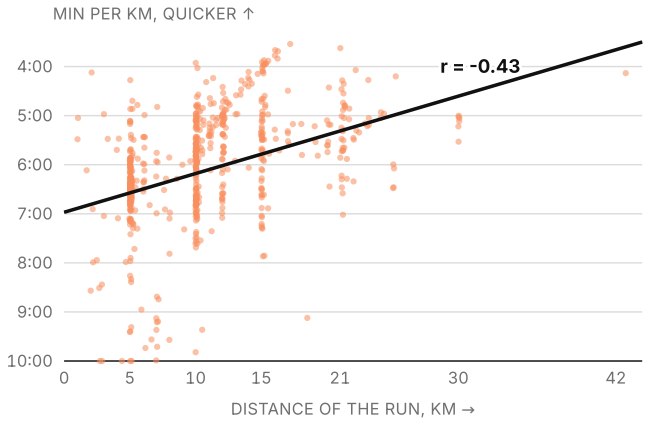

−0.43
treadmill distance against pace

5 s
quicker per km for each extra km

69 s
per km quicker at 21 km than at 5 km

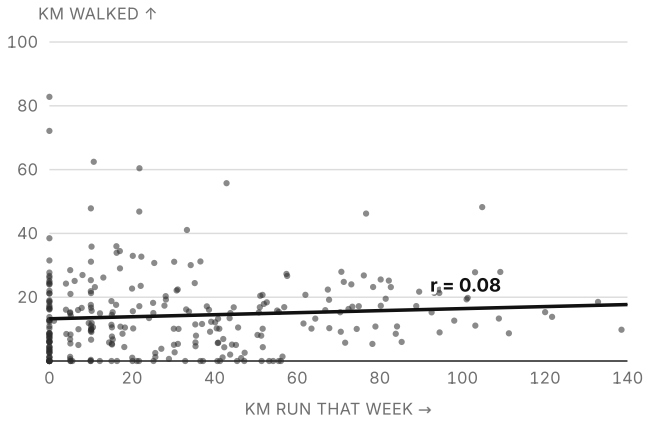

0.08
weekly running km against walking km

TREADMILL RUNS: DISTANCE AGAINST PACE

One dot per treadmill run, with quicker runs higher up. The black line is the straight line that fits the dots best. It goes down to the right, which means longer runs were quicker.

EACH WEEK: KILOMETRES RUN AGAINST WALKED

One dot per week since 2021. The line is nearly flat, so how much I ran in a week tells you almost nothing about how much I walked.

Source: Activity Log · least-squares fits; treadmill runs quicker than 3:30 a km left out

Each sport’s biggest day.

My longest treadmill run was 42.7 km, a whole marathon in one room. Outside, my longest run was 31.0 km and my longest trail run was 34.8 km, with 841 m of climbing. My longest walk was 30.0 km, and my biggest hike climbed 1,979 m.

FROM THE LOGBOOK

“If you do it, you will feel better when it is over. If you do not, you will feel worse. So go do it.”

CHAPTER 4

04 Records

My longest, highest and hardest days

The records I've set on foot and how I got to them: my longest outings and biggest climbs, my biggest weeks and months, the milestones along the way, my personal records and streaks, and how often a record should break by chance.

THE DISTANCE RECORD

The record broke 14 times.

The longest outing on foot has stood since May 2022.

Every time I go out on foot, I'm up against my longest outing so far. My first record was a 5.1 km treadmill run on day one. I reached 10 km on day 2, a half marathon in December 2019, 30 km in August 2021 and 42.7 km on a treadmill on 1 May 2022. In the 1,218 outings since then, the closest I've come is 34.8 km, on a trail run.

THE LONGEST OUTING ON FOOT

Treadmill run · Outdoor run · Trail run · Walk · Hike

Source: Activity Log · distance of every run, walk, trail run and hike

1 · THE LONGEST OUTINGS

Ten outings past 30 km.

Seven of them were on a treadmill.

83 of my outings reached a half marathon (21.1 km) and ten went past 30 km. The seven on the treadmill were all between Aug 2021 and Jul 2022. Since then my long days have been outside: a 34.8 km trail run with 841 m of climb, a 31.0 km outdoor run and a 30.0 km walk with 833 m of climb. Apart from the marathon, my biggest day on foot was 19 Feb 2025, when three outings added up to 40.6 km.

Here the outings on the same day are added together. Only the marathon got there in one go.

Source: Activity Log · distance of single outings and of whole days on foot

13 climb records.

The biggest climb on foot went from 20 m to 1,979 m.

My first ten climbing records were all walks, up to 665 m in May 2022. After that the hikes took over: 1,425 m in June 2022, 1,718 m in April 2023, 1,979 m in March 2025. My biggest day of climbing was 19 Aug 2023, when four outings added up to 2,074 m, more than any single outing.

Source: Activity Log · elevation gain of single outings on foot; start region from Strava GPS

March 2023 climbed the most.

5,279 m in one month, the most of any.

My biggest week for distance started on 2 Mar 2026, with 153 km from nine outings. My biggest month was August 2021, with 559 km, and all six of my biggest months for distance were in 2021. My biggest month for climbing was a different one. In March 2023 I climbed 5,279 m, 60% of an Everest in a single month, from only 297 km.

THE BIGGEST WEEKS BY DISTANCE

Weeks run from Monday to Sunday. Each bar is my distance on foot that week, and the biggest week is in orange.

THE BIGGEST MONTHS BY CLIMB

The months when I climbed the most were hardly ever the months when I went the furthest. The climbing came from trips to the mountains and the distance mostly from the treadmill.

Source: Activity Log · distance and climb on foot by week and by month

The kilometres came faster.

The first 1,000 km took 720 days. The last 2,500 took 371.

I passed 1,000 km on foot on 7 Aug 2021, and 2,500 km 93 days after that. I reached 10,000 km on 1 Jul 2025. I like to count my climbing in Everests, at 8,849 m each. The first one took me 944 days and the ninth took 103. So far I'm at 13,237 km and 9.5 Everests.

111 personal records in 2026.

The most of any year, and the year isn’t over.

A personal record here is my best time on a Strava segment, a timed stretch of road or trail, beating every earlier time of mine on it. I’ve set 363 on foot, over 118 outings. My treadmill runs set almost none, because segments need GPS. By year, that’s 36 in 2021, 40 in 2022, 96 in 2023, 34 in 2024, 46 in 2025 and 111 in 2026 so far. In 2026 so far I’m setting 0.42 per outing, more than ever before.

301 days in a row.

The longest streak on record, and still going.

My longest run of days with an outing began on 29 Dec 2025 and I haven't missed a day since: 301 days to 25 Oct 2026. In weeks, I've been out at least once for 162 weeks in a row, every week since 18 Sep 2023. Counting only days on foot, my best is 109. For running alone it's 45, and for walking alone 11. The opposite record is from the early years: 353 days with no outing at all, from July 2020 to June 2021.

IN A ROW

301 days with an outing, still going

162 weeks with at least one outing

45 days running in a row

Source: Activity Log and Strava GPS start points · Tanzania regions

More records than chance.

The distance record broke 14 times. A random order would give 8.0.

If my outings had come in a random order, a record would break about ln(n) + 0.58 times, where n is the number of outings. Early on almost anything is a record, and later almost nothing is. For my 1,730 outings that comes to 8.0. My distance record actually broke 14 times, 1.7 times as often. My runs on their own broke their record 14 times, compared with 7.2 by chance. My walks broke theirs 6 times, compared with 7.3, which is about what chance would give. My current record has stood for 1,218 outings. In a random order, the longest outing would come this early 30% of the time.

RECORDS AGAINST CHANCE

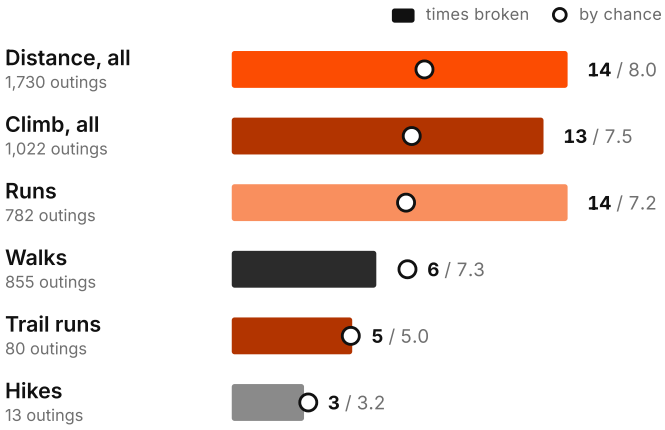

14
times the distance record broke

8.0
times chance would give

FROM THE LOGBOOK

“Something is better than nothing. Do what you can.”

CHAPTER 5

05 Where

Five countries. Seventeen regions.

Where I went out. Five countries and seventeen regions of Tanzania on the map, and what I did in each: the distance at home, the climbing in the mountains, the trips across the border, how my home base moved over the years, and the outings that never went outside.

ACROSS AFRICA

94% began in Tanzania.

Counting every outing that has a GPS start point.

1,155 of my 2,061 outings have a GPS start. The other 906 were indoors, most of them on a treadmill. Of the ones I can place, 1,082 began in Tanzania. The rest were in Kenya (32), Malawi (23), South Africa (13) and Rwanda (2), plus 3 that I count as others.

3 Others
4 km on foot · 71 m up · 3 days
from Apr 2024

The darker the country, the more outings I had there. The shading uses a log scale so the smaller numbers still show up.

17 regions of Tanzania.

Three of them hold 78% of my outings.

Of my 1,082 outings in Tanzania, 375 were in Dodoma, 236 were in Dar es Salaam and 233 were in Kilimanjaro. Dodoma is where I've had the most outings and the most days out (319), and 1,861 km on foot. Kilimanjaro has 37% of all my climbing in Tanzania, and Morogoro 26%. The other thirteen regions together have 14% of my outings.

OUTINGS BY REGION

The map shades each region by whichever measure is picked above it. Hover over a region to see all four. The pale grey ones are regions I haven't been out in yet.

KILOMETRES ON FOOT BY REGION

My ten busiest regions by outings and by distance. The order hardly changes, and the same three places are at the top of both.

Source: Activity Log and Strava GPS start points · Natural Earth region outlines

The climbing is in two regions.

Morogoro and Kilimanjaro have 29% of my outings and 63% of my climbing.

Across Tanzania I climbed 13.9 m for every kilometre on foot. In Dodoma it was 6.5 m and in Dar es Salaam 3.5 m, so the places where I go out most are also the flattest. In Morogoro I climbed 49 m per km and in Kilimanjaro I climbed 21 m per km, and 64 of my trail runs and hikes started there.

METRES CLIMBED FOR EACH KILOMETRE

OUTINGS IN EACH COUNTRY

Every outing with a GPS start outside Tanzania, by country.

KILOMETRES ON FOOT IN EACH COUNTRY

My trips across the border were short. The most days I went out in any one country was 25, in Kenya.

Source: Activity Log and Strava GPS start points · outings outside Tanzania

Fewer outings without GPS.

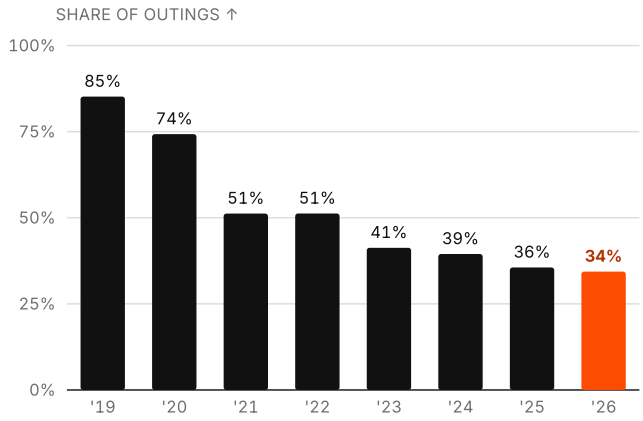

My outings with no GPS start fell from 85% in 2019 to 34% in 2026.

906 of my outings have no start point because they were indoors. 646 of them were runs on the treadmill. In 2019 they made up 85% of the year, and no year since has had a bigger share. 2026 so far is down to 34%.

OUTINGS WITH NO GPS START

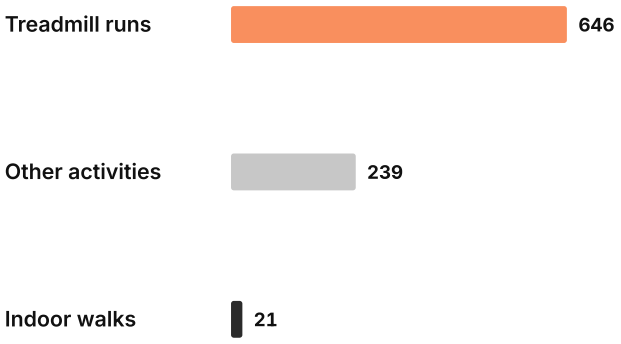

906	646	85%	34%
outings in all	treadmill runs	of 2019 outings	of 2026 outings so far

SHARE OF EACH YEAR WITH NO GPS START

Each bar is the share of that year's outings with no GPS start, which means they can't go on the map.

WHAT THE OUTINGS WITH NO PLACE WERE

The maps above only show outings that went outside, so most of my treadmill years are missing from them.

Source: Activity Log · outings without a GPS start point

How widely they spread.

In 2023 my outings were spread like 4.5 equal regions, and in 2021 like 2.2.

I wanted one number for how spread out my outings were, so I used the effective number of regions. It asks how many equally busy regions would give the same spread, and it's one divided by the sum of each region's squared share of my outings. Seventeen regions with one doing almost everything count as close to one. Four regions with a quarter each count as four. My narrowest year since the habit started was 2021, at 2.2, when Dodoma had 65% of my outings. The widest was 2023, at 4.5. Over the whole record my outings are spread like 4.5 regions, and the busiest three have 78% of them.

HOW THE OUTINGS SPREAD

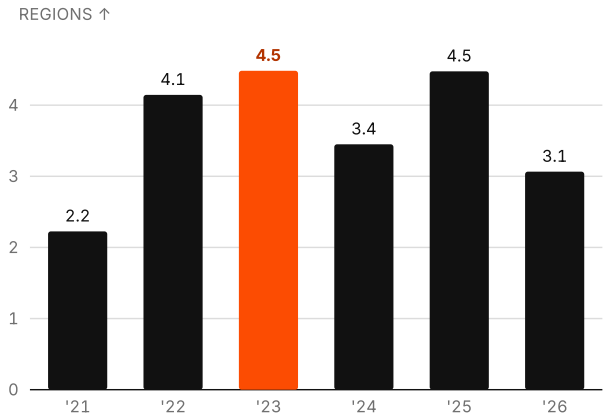

4.5
effective regions, all years

4.5
in 2023, the widest

2.2
in 2021, the narrowest

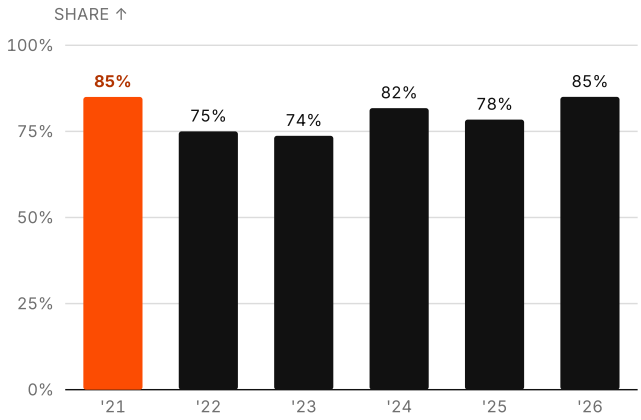

78%
of outings in the busiest three

EFFECTIVE NUMBER OF REGIONS, YEAR BY YEAR

The taller the bar, the more regions that year's outings were spread over. I left out years with fewer than 50 outings in Tanzania.

SHARE OF THE OUTINGS IN THE TOP THREE REGIONS

This is the same thing seen from the other side. The higher the bar, the more that year depended on three places.

IV

The long view

Everything in the order it happened, and the targets I set myself each year.

06 **Timeline** 07 **Goals**

CHAPTER 6

06 Timeline

From my first upload to now

Everything in the order it happened, drawn on one chart: the milestones, the firsts, the trips across the border, the new regions, every pair of shoes, and the streaks and the long gaps. After that, every moment written out year by year.

AUG 2019 TO OCT 2026

No long gap since then.

Since my 353-day gap, no break has lasted more than ten days.

My log starts on 17 Aug 2019, and I logged 62 outings in the first 11 months. Then I stopped from July 2020 to June 2021. Since I started again, the longest gap between two outings has been ten days, and my current streak has run for 301 days, since 29 Dec 2025. Along the way there have been 10 firsts on foot, 4 countries besides Tanzania, 17 regions of Tanzania and 11 pairs of shoes.

Source: Activity Log, Strava GPS start points and the shoe list · every dated moment in the record

1 · THE PACE

The first 250 took 785 days.

Each 250 since then has taken less than a year.

My 250th outing came on 10 Oct 2021, 785 days after the first, and the long gap falls inside that stretch. Since then each block of 250 has taken between 169 days (to the 500th, in Mar 2022) and 362 days (to the 1,250th, in May 2024). My breaks got shorter too. The longest one each year went from 353 days in 2020 down to no break at all in 2026 so far.

FROM THE LOGBOOK

“Ease is a greater threat to progress than hardship.”

DENZEL WASHINGTON

CHAPTER 7

07 Goals

What I aim for each year

The goals I've met and the ones I haven't yet. Three targets I set myself every year, the chances that the last one closes this year, one race I've run four times, fifty trips to the same headland, and every month since the habit started with at least one outing.

THREE TARGETS, EVERY YEAR SINCE 2021

Both 1,000 km rings closed.

2026 is the first year I've closed both of them. My climbing ring is at 80%.

Every year I aim for the same three things: 1,000 km walked, 1,000 km run (treadmill, outdoor and trail) and 24,000 m climbed on foot. I've hit the running target four times, in 2021, 2022, 2023 and 2026, and the walking target once, on 10 Sep 2026. I've never hit the climbing target. My best year was 2023, with 21,490 m. With 67 days of 2026 left, I need another 4,752 m of climbing.

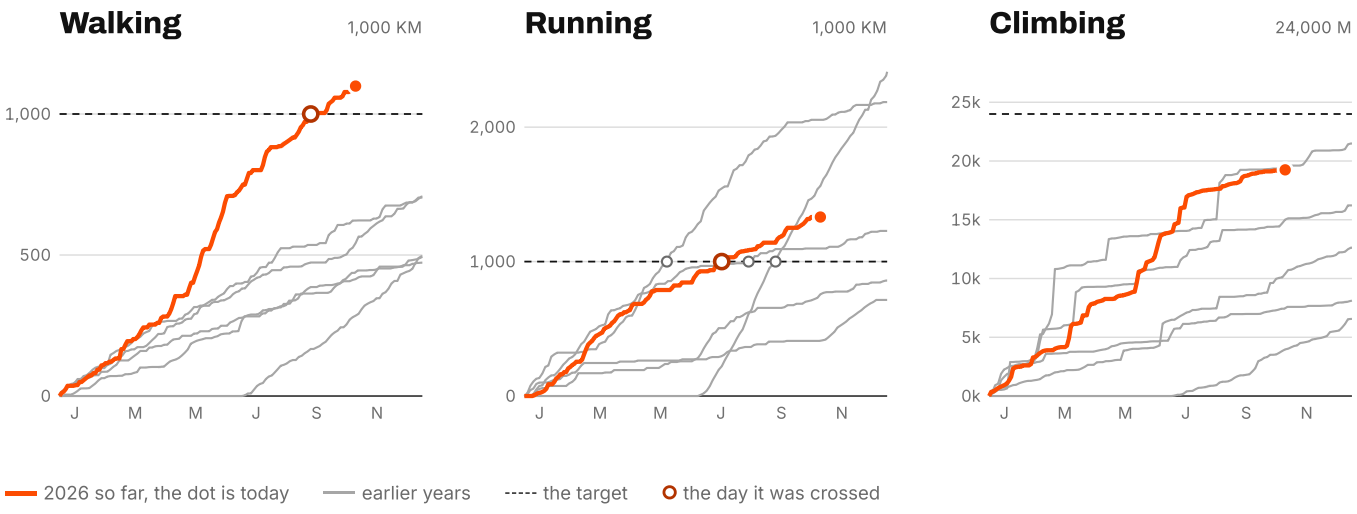

2026 SO FAR

1,099 km
walked, 110% of the target

1,331 km
run, 133% of the target

19,248 m
climbed on foot, 80% of the target

67 days
left in 2026

Source: Activity Log · daily totals on foot, running total through each calendar year

Running closed four times.

My walking ring closed once, and my climbing ring never has.

My running ring closed on 10 Sep in 2021, 24 May in 2022 and 14 Aug in 2023. In 2021 I ran 2,412 km, 2.4 times the target. In 2024 and 2025 I didn't make it, with 714 km and 859 km. I walked less than 800 km a year until 2026, when I passed 1,000 km on 10 Sep 2026. The closest I've come on climbing was 2023, at 90%.

RINGS CLOSED, 2021 TO 2026

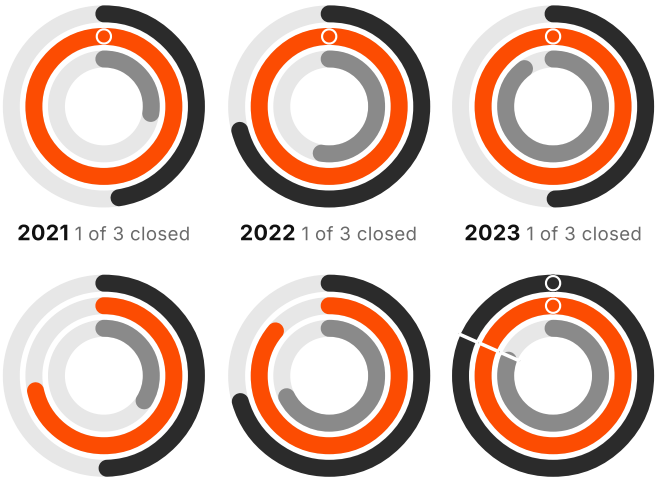

4
running, best 2,412 km in 2021

1
walking, best 1,099 km in 2026

0
climbing, best 21,490 m in 2023

1
years with both 1,000 km rings closed

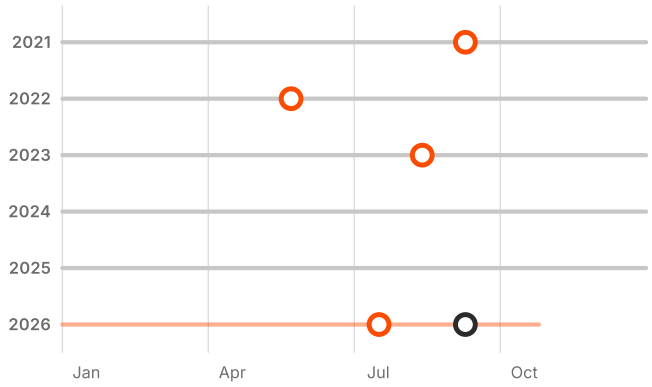

EACH YEAR AS THREE RINGS

● outer ring, walking 1,000 km ● middle ring, running 1,000 km
● inner ring, climbing 24,000 m

Each ring fills up to its share of the target, and a dot marks a ring that closed. On 2026, the white notch shows where the year is today.

THE DAY EACH RING CLOSED

A ring on the line is the day I reached a target. The earlier in the year, the bigger the year was. Targets I didn't reach are listed at the end of the row with how far I got.

Source: Activity Log · yearly totals on foot against the three fixed targets

Climbing: a 33% chance.

The chance that I reach my climbing target in 2026.

To get there I need 4,752 m in the last 67 days, which is 71 m a day. So far this year I've averaged 65 m a day, counting rest days, so if I keep to my average I'll finish just short. To get a better idea, I played out the rest of the year 4,000 times. Each time I picked 67 days at random from my 298 days of 2026 so far and added up their climbing. 33% of those runs got past 24,000 m, and the one in the middle finished at 23,459 m. What worries me is my recent pace. Since 1 August I've been climbing 22 m a day, and at that rate the year ends near 20,700 m.

THE CLIMB, 2026

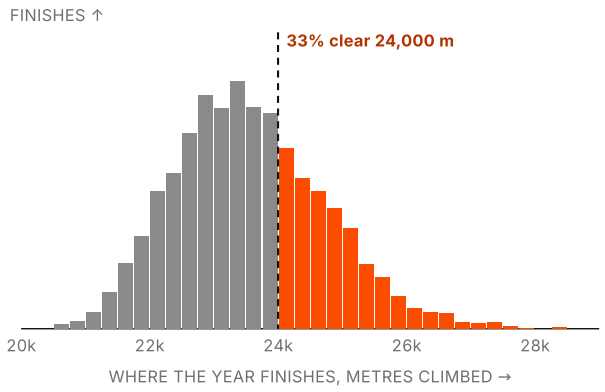

4,752 m

METRES CLIMBED EACH MONTH OF 2026

The orange months were above the pace I now need. 5 of the 9 full months were. October, in grey, isn't over yet.

Source: Activity Log · climb on foot each day of 2026, resampled 4,000 times with a fixed seed

Faster every time.

I've run the Kilimanjaro Half four times.

It's the same half marathon each time. My moving time went 4:00 in 2023, 3:43 in 2024, 3:42 in 2025 and 3:38 in 2026, 23 minutes faster from the first to the last. I cut my stops even more than my running time: 32 minutes standing still in 2023 and 6.5 in 2026. If I put all of them in the same race, my 2023 self would still be 2.1 km from the finish when my 2026 self crossed the line. Each time I set 18 personal records on the course's timed segments. The 2023 race got 125 kudos, more than any other outing I've logged.

FOUR EDITIONS OF ONE RACE

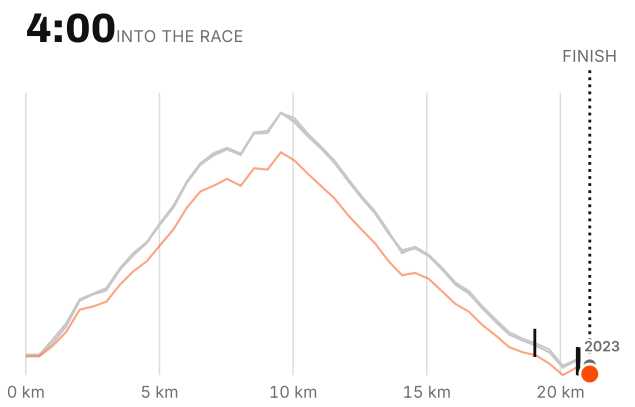

22.6 min
quicker in 2026 than in 2023

26 min
less time stopped than in 2023

2.1 km
2023 behind when 2026 finished

125
kudos in 2023, the most of any outing

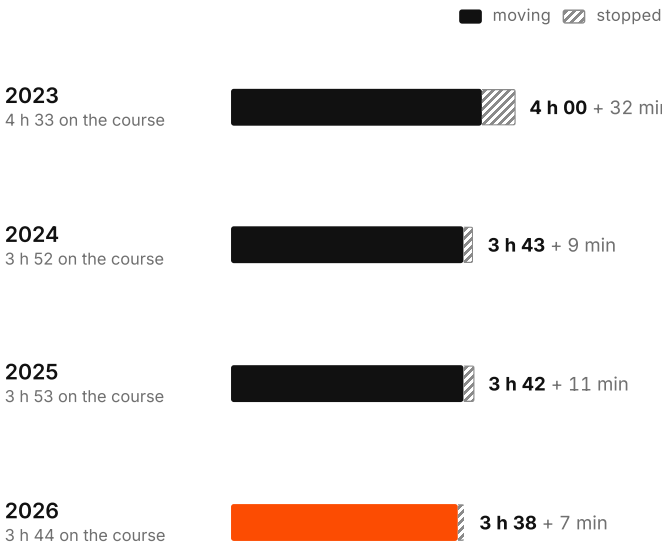

ALL FOUR EDITIONS, RACED AT ONCE

2026	2025	2024	2023
3:38	3:42	3:43	4:00
the quickest	0.4 km behind when 2026 finished	0.5 km behind when 2026 finished	2.1 km behind when 2026 finished

The line is the course from start to finish, drawn by its height. Each dot runs it at my pace from that year, half a kilometre at a time, and the ticks show where the others were when the fastest one finished.

MOVING AND STOPPED, EACH EDITION

The solid bar is time moving and the hatched end is time stopped. Of the 48 minutes I saved on the course, 53% came from shorter stops.

Source: Kilimanjaro Half table and course profile · moving pace per half kilometre, elapsed and moving time per edition

Fifty trips to Ras Kilomoni.

In 173 days. The last one took my record to 2,000 outings.

In 2026 I set myself a different kind of target: get to the headland at Ras Kilomoni fifty times. I numbered the trips I to L as I went, in Roman numerals. It took me from 9 Mar 2026 to 28 Aug 2026, 34 trips walking and 16 running, 535 km in all. June was my busiest month, with 14. The last trip, L, was also my 2,000th outing.

FROM THE LOGBOOK

“I wanted to show that it is beautiful to be strong, to have drive, to have will, to not fail, to give it your all.”

KERSTIE ENNIS

V

The lessons

What I think seven years of logging have taught me.

CHAPTER 8

08 What It Means

What I've learned from it

What seven years of logging have taught me, in my own words, with the numbers behind each point: how much time it takes, why I count days more than kilometres, the small days, keeping a floor under my weeks, how the long days come, and what makes a year add up.

SEVEN YEARS, READ BACK

71 minutes a day.

That's what this has taken since 2021. This year it's 106.

If you asked me what all this costs, I'd say time. Since the habit started in 2021 I've spent 71 minutes a day on the move, and that's counting the rest days too. If I add up every outing since my first upload, it comes to 2,382 hours, which is 99 days and nights without stopping. This year it went up to 106 minutes a day, and I've been out on every one of the 298 days so far. The rest of this page is what I think all that time has taught me.

Keep the days.

In my slowest year my distance fell by 58%, but my days out only fell by 12%.

2022 was my biggest year for distance, 2,907 km on foot over 266 days. By 2024 I was down to 1,214 km. The long days went first. I had 37 days of 21 km or more in 2022 and four in 2024. My days out hardly changed, from 266 to 234. If I could only keep one thing, I'd keep the days. When the distance came back in 2026, it had something to build on: 2,430 km so far, with an outing on all 298 days.

2022 AGAINST 2024

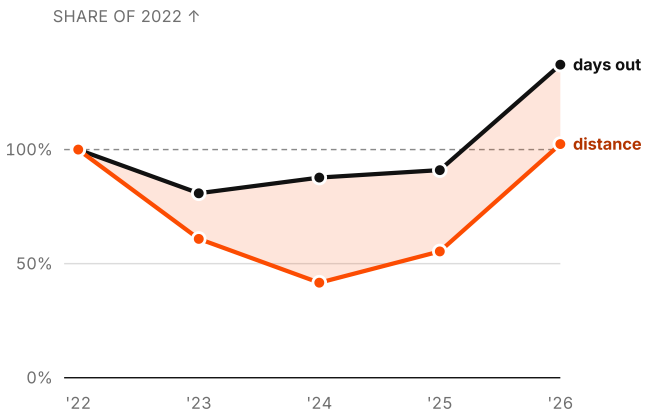

58%

days out in 2026 so far

DAYS OUT AND DISTANCE, AGAINST 2022

Both lines start at 100% in 2022. The black line is the share of days I went out, and the orange line is my distance on foot per day. The shaded gap shows how far the distance fell behind the days.

DAYS OF 21 KM OR MORE ON FOOT

Most of my distance comes from the long days. They fell from 41 in 2021 to 4 in 2024, and 2026 is back up to 17.

Source: Activity Log · days with any activity, and distance on foot, per calendar year

The small days count.

About one day out in six was hardly anything, and those days kept me going.

Since 2021 I've had 1,435 days out, and on 246 of them I covered less than 2 km on foot. 85 of those were short walks or runs, and the other 161 were other activities. Together they add up to 96 km, less than 1% of my distance, and I'm fine with that. They're for the days I'd otherwise skip, and they help the next day too. After one of those small days I went out again 76% of the time. After a full rest day it was 50%. I had the most of them in 2024, 68, which was also my lowest year for distance. On a bad day I just do a small version.

SMALL DAYS SINCE 2021

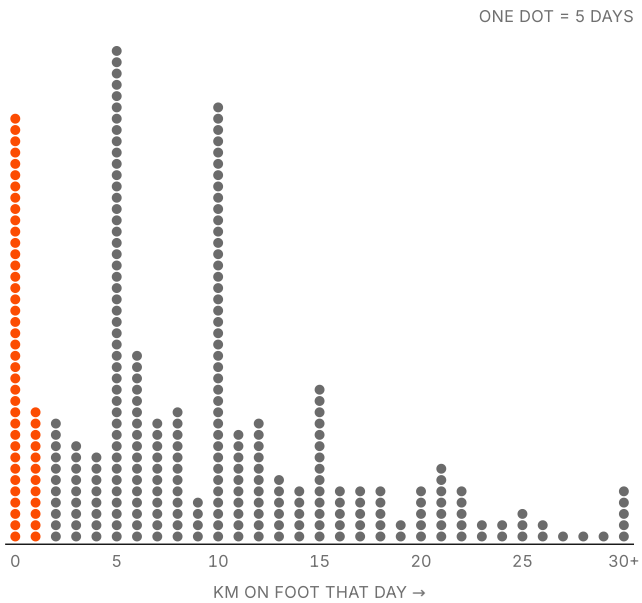

246 days
under 2 km on foot

17%
of all my days out

76%
out again the next day

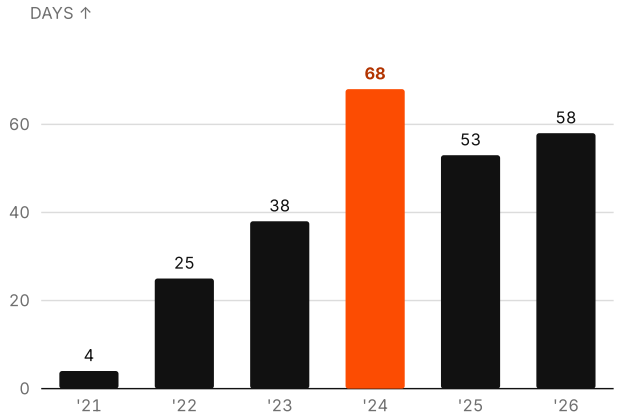

50%
out again after a full rest day

EVERY DAY OUT SINCE 2021, BY ITS DISTANCE

Each dot is five days out, stacked by how far I went on foot that day. The orange dots on the left are the days under 2 km, and a day with only other activities counts as zero.

DAYS UNDER 2 KM EACH YEAR

The small days went up as the distance came down. 2024 had the most of them and the least distance, and I still kept going.

Source: Activity Log · every day with an activity since the habit began, distance on foot only

No week under 20 km.

That’s 2026 so far. From 2022 to 2025, 38 weeks were under 10 km.

When I look at my weeks, the big ones haven’t changed much. My biggest week of 2022 was 148 km and this year’s is 153 km. The change is in the quiet weeks. From 2022 to 2025 I had 38 weeks with less than 10 km on foot. In 2026 my lowest week is 20 km, and the middle half of my weeks are between 41 and 72 km. The first half-year of the habit had a floor too, with no week in 2021 under 40 km. With the same top and a higher floor, 2026 is my best year for distance per day, 8.2 km. If the bad weeks aren’t too bad, the year mostly takes care of itself.

WEEKS ON FOOT

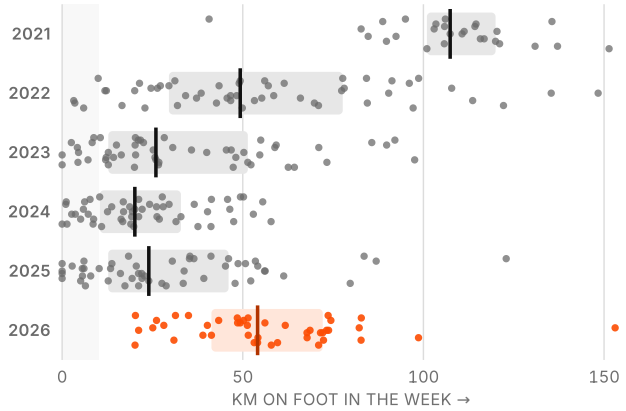

20 km
my lowest week of 2026

0 weeks
under 10 km in 2026

under 10 km, 2022 to 2025

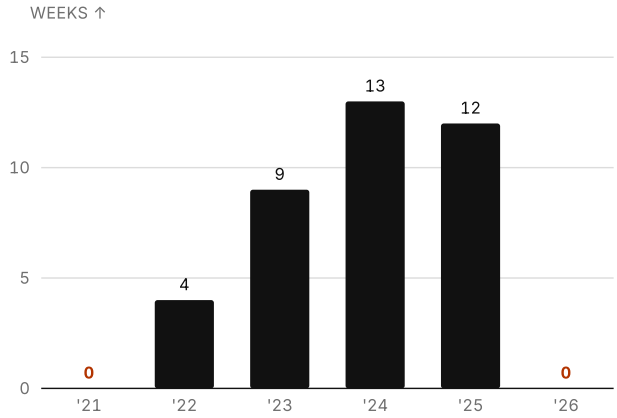

8.2 km
a day in 2026, the most of any year

EVERY FULL WEEK, BY ITS DISTANCE

One dot per full week, Monday to Sunday. The shaded band is the middle half of my weeks, the tick is the middle week, and the grey strip on the left is under 10 km.

WEEKS UNDER 10 KM EACH YEAR

The years at zero are the ones where I kept a floor, the first half-year of the habit and 2026. In every year in between, some weeks slipped.

Source: Activity Log · distance on foot per full week since the habit began

Long days come in bunches.

The day after one averages 13.2 km, about double a normal day.

Since 2021 I've had 120 days of 21 km or more on foot, which is half-marathon distance or more. 108 of them, 90%, were followed by another day out, and that next day averaged 13.2 km, compared with 6.6 km on a typical day. The three days before a long day were bigger than usual too. So my long days tend to come in the middle of a busy patch, with big days either side. Long runs are the same. After a run of 15 km or more, I ran again the next day 71% of the time and took a full rest 11% of the time.

DAYS OF 21 KM OR MORE SINCE 2021

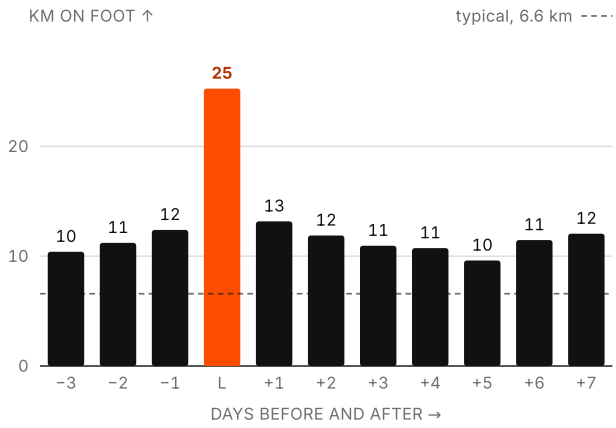

120 days
of 21 km or more on foot

90%
followed by another day out

13.2 km
the next day, against 6.6 km on a typical day

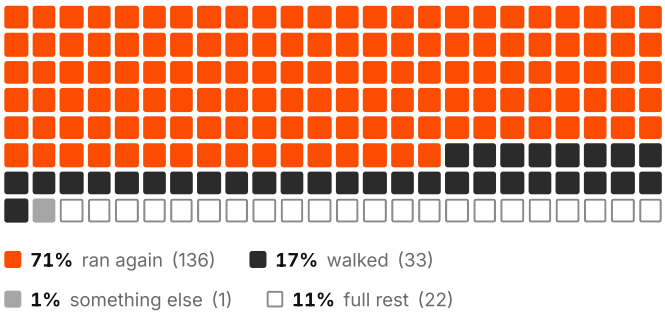

11%
full rest after a 15 km run

THE DAYS AROUND A LONG DAY

The orange bar is my average long day. The bars either side are the days around it, three before and seven after, and the dashed line is an ordinary day.

WHAT CAME THE DAY AFTER A 15 KM RUN

One square per run of 15 km or more, coloured by what I did the next day. Most of the time I went straight back out, partly because long days tend to happen in busy months.

Source: Activity Log · days of 21 km or more on foot and runs of 15 km or more since the habit began

How a year adds up.

A year's total depends on how often I go and how far I go each time.

Every year's total is the number of days out times the distance per day out. 1,000 km is 2.7 km a day if you go every day, or 4.1 km a day if you go two days in three. I've done it both ways. 2021 was the year of long days, 16.0 km per day out on 49% of days. 2026 is the year of going every day, 8.2 km on 100% of days. 2024 was low on both, 64% of days at 5.2 km, and ended at 1,214 km. The curves on the chart are yearly totals, so you can see what lifted each year.

THE TWO LEVERS

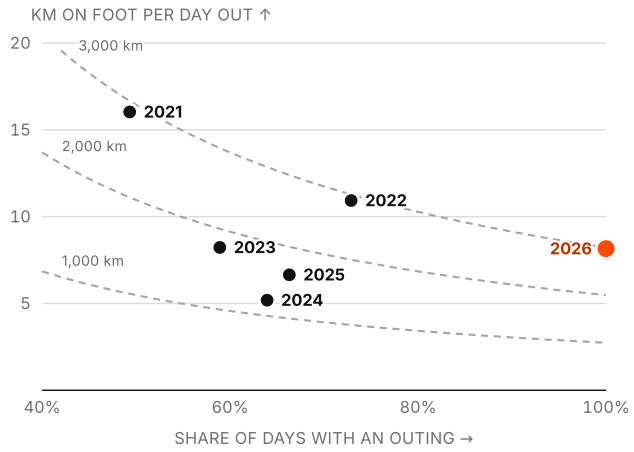

2.7 km
a day makes 1,000 km a year

16.0 km
per day out in 2021, the longest

100%
of days out in 2026 so far

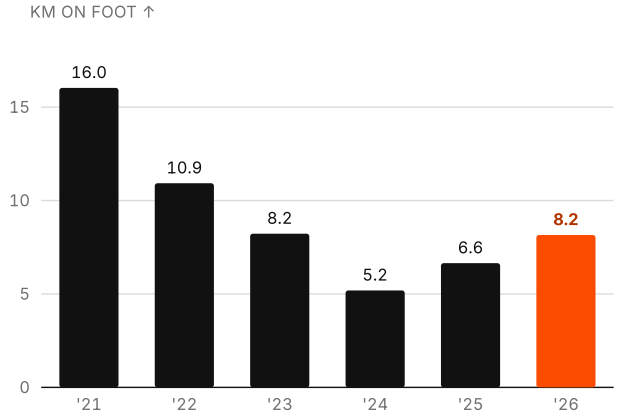

1,214 km
in 2024, low on both

EACH YEAR BY ITS TWO LEVERS

Across is the share of days I went out, and up is the distance per day out. Each dashed curve is one yearly total, and a year above a curve beat that total.

DISTANCE PER DAY OUT

From 2021 to 2024 my distance per day out kept falling while my days out stayed level or went up. 2026 sits in between, with more distance per day than 2024 and far more days.

Source: Activity Log · days with any activity and distance on foot per calendar year

If you're starting out.

Four things I'd pass on.

COUNT THE DAYS

234 days

out in 2024, my lowest year for distance

12% FEWER THAN 2022

DO THE SMALL VERSION

246 days

under 2 km that kept the habit going

76% OUT AGAIN THE NEXT DAY

KEEP A FLOOR

20 km

my lowest week of 2026

NO WEEK UNDER IT

LONG DAYS TOGETHER

13.2 km

the day after a long day, on average

A TYPICAL DAY IS 6.6 KM

That's what seven years of logging say to me. All the big numbers on the other pages came from fairly small things: about an hour a day, a short version on the bad days, not letting a week get too thin, and long days in the middle of busy weeks. There are 67 days of 2026 left. I'll be out tomorrow.

FROM THE LOGBOOK

"Break the long challenges into increments, things you can do right now that add up over time."

DAN CNOSSEN

Epilogue

The last activity in this edition is from 25 October 2026. I’m on 301 days in a row, and the habit that started in 2021 has now lasted 1,947 days.

None of the totals in this book came from one big effort. They came from 2,061 ordinary outings, most of them short, fitted in early in the morning or in the evening on days like any other. The log will keep growing after this edition, and the next one will have the new numbers.

I’ll be out tomorrow.

Gerald Tesha

ANNEX A

How this book was made

This book started as a website, My Strava Journey, where I laid out my Strava history so anyone could read it. None of the figures are typed in by hand. They're all worked out from my activity log, which I refresh every week.

Each week I pull my latest activities from Strava through an MCP server. MCP, the Model Context Protocol, is an open standard that lets an AI assistant connect to other tools and data. Here it connects to my Strava account and gives back every activity in one raw CSV file.

A set of Python scripts then rebuilds everything from that file: the activity log, the totals on foot, the places, the streaks, the records and the tables behind each chart. Before anything is published, activity names, Strava IDs and exact GPS points are taken out. Then the checks run and the site goes live with the new numbers. This edition has 2,061 activities, up to 25 October 2026.

I built it with Claude, Anthropic's AI model, helping with the code and the analysis. I decided the questions, the design and how it should read. Claude wrote the code, dug through the data and checked each number against the log before it went into the text.

DATA SOURCE	My Strava activity history, pulled weekly through an MCP server
PIPELINE	Python, standard library only: rebuild, foot-only totals, derived tables, privacy pass
DATA STORE	32 CSV tables that every number comes from
SITE	React 18 and Vite 5, React Router with hash links, PapaParse to read the CSVs
CHARTS	Drawn by hand in SVG and canvas, without a chart library
TYPE AND COLOUR	Archivo and Inter on a simple grid, with Strava orange kept for the data
QUALITY	Data validation, tests, an axe accessibility audit and layout checks at phone widths
HOSTING	GitHub Pages, from the repository github.com/hpgerald/my-strava-journey
BOOK	The site printed through headless Chromium to an A4 PDF

The weekly pipeline

01 Strava
Every outing I record lands in my Strava account.

02 MCP pull
Each week the latest activities come out through an MCP server, as one raw CSV.

03 Build
Python scripts rebuild the activity log and every table derived from it.

04 Privacy
Names, Strava IDs and exact GPS points are removed, and places are kept to country and region.

05 Checks
The data rules, tests, accessibility and phone layouts are checked.

06 Site
The site reads the tables in the browser and draws every chart from them.

07 Book
The same pages print as this book, and I make a new PDF with each refresh.

ANNEX B

About the data

Where the numbers come from

Every activity comes from my Strava export: the date and time, sport, distance, moving and elapsed time, climb, heart-rate effort, kudos and personal records. Places come from each activity's GPS start point, kept only to country and region.

Distance and climb only count the four sports on foot: runs, walks, trail runs and hikes. Everything else counts as other activities. Those still count as outings and days out, but they add no distance or climb, and I don't name them.

A treadmill run is one that Strava marks as done indoors. Those have no GPS, so they never show up on a map and set almost no segment records.

Relative Effort	Strava's score for how hard a session was, based on the time spent in each heart-rate zone. The higher it is, the harder my heart worked.
Kudos	A thumbs-up from someone on Strava, the same idea as a like.
PR	Personal record: my best time on a segment or over a set distance.
Achievement	A badge Strava gives on a segment, for a top-10 time or a personal best.
Elevation gain	All the metres climbed in an activity, added up over every uphill stretch.
Moving time	The time I was actually moving, with the pauses taken out. Elapsed time includes the stops.
Trainer	An indoor session, like a treadmill run, as marked by Strava. These have no GPS.

THE AUTHOR

Get in touch.

I’m Gerald Tesha. I work in monitoring, evaluation and data, and this book is what I did with my own numbers. If you’d like something like this made from your own data, want to work together, or want to feature this story, I’d be happy to hear from you.
