MY STRAVA JOURNEY

Showing Up

Seven years on foot, from my own log

Gerald Tesha

This edition covers every activity I logged on Strava from 17 August 2019 to 25 October 2026: 2,061 of them.

Every number in this book comes from that log, and every chart is drawn from it. Distance and climb only count my four sports on foot: runs, walks, trail runs and hikes. I took out activity names and exact locations before publishing.

The book is my website, My Strava Journey, put together as one volume. I print a new edition each time the data is refreshed.

Annex A explains how I made it, and my contact details are on the page before the back cover.

ANNEX B About the data

Get in touch

Prologue

I uploaded my first activity on 17 August 2019. Over the next months I logged 62 outings, most of them runs on a treadmill. Then I stopped for 353 days, from July 2020 to June 2021.

When I started again, I did not stop. Since June 2021 I have been out on 1,435 of 1,947 days, and my longest break has been ten days. As I finish this edition, I am on 301 days in a row.

This book is me going back through that record. It is made from 2,061 activities and nothing else. Every number comes from my Strava log, and when the log cannot tell me why something happened, I say so and I do not guess.

There are five parts: the habit as a whole, each year on its own, my sports, records and places, the timeline and my goals, and last, what I think it all means. To everyone who gave me kudos along the way, *asanteni sana*, thank you very much.

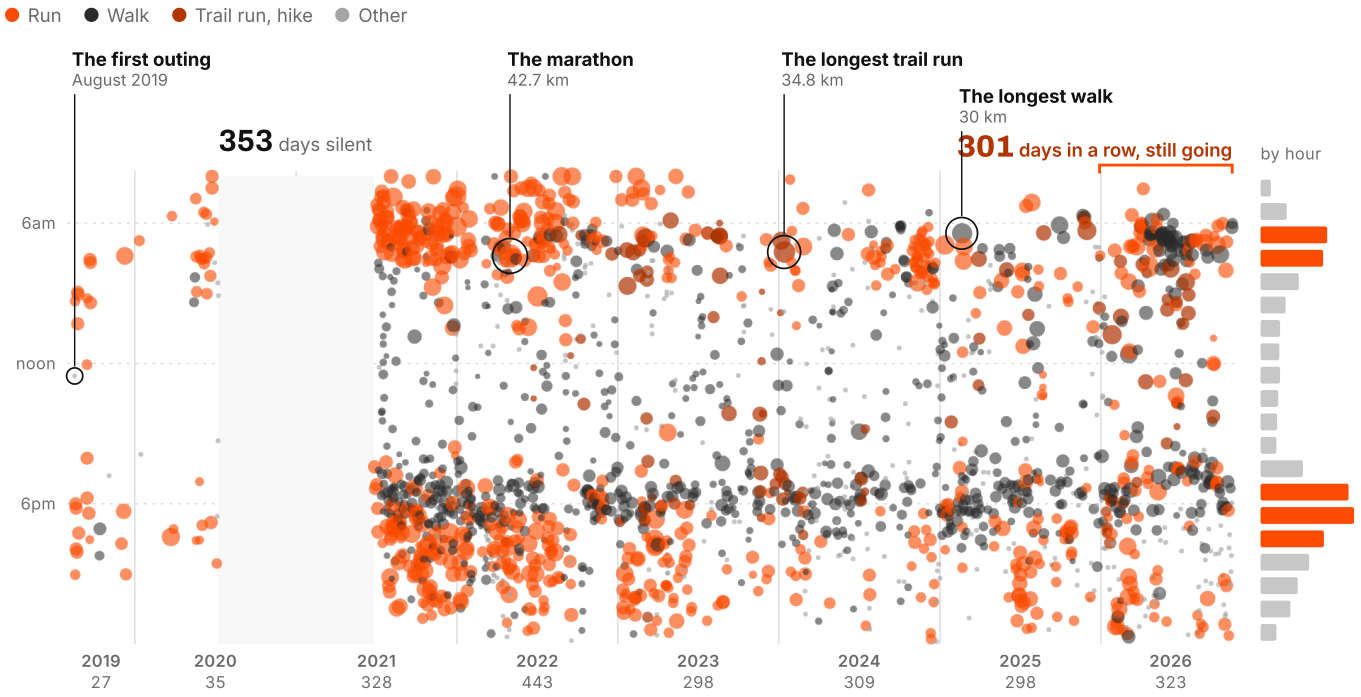

The habit

The whole record at once: how often I go out, when, where, and what I do.

CHAPTER 1

01 The Journey

Seven years of one habit

2,061
ACTIVITIES

13,237 km
ON FOOT

84,367 m
CLIMBED

301 days
CURRENT STREAK

Seven years ago I was going out now and then, mostly on a treadmill. Today I go out every day. The change did not come from big days. Most of my outings are simple, a walk or an easy run of about 6 km, around one hour. It came from going out often. Since I came back in June 2021, I have gone out on about three days in every four, and since December 2025 I have not missed a single day. Each year had its own character, and you can open any of them below.

OPEN A YEAR

2019 →

A small beginning

Mostly the treadmill. 85% of my outings were runs, many of them on weekends.

2020 →

The pause

Most outings were early, before 10 in the morning. Then I stopped logging for almost a year.

2021 →

Coming back

I started again. On 57% of my days out, I went out more than once.

2022 →

The busiest

Many short outings, about 56 minutes each.

2023 →

The hills

More hills. I climbed 12 m for every km and ran 303 km on trails.

2024 →

Travelling

I went out in five countries. Half my outings were done in under 35 minutes.

2025 →

Walking

Walks were 47% of my outings, and I did my longest walk, 30 km.

2026 →

Every day

Usually one outing a day, a longer one, about 98 minutes.

HOW THE STREAK HOLDS

One day leads to the next.

Usipoziba ufa utajenga ukuta: if you do not fill a crack, you will end up building a wall. The best thing my log taught me is that going out builds on itself. One day out makes the next one more likely, and after a week in a row it is almost certain I will go out again. Before the habit set in, one day out led to another only 35% of the time. The danger is on the other side: after a few days off, starting again is hard. So I protect the chain, and on a tired day a short walk is enough.

CHANCE THE NEXT DAY IS ACTIVE

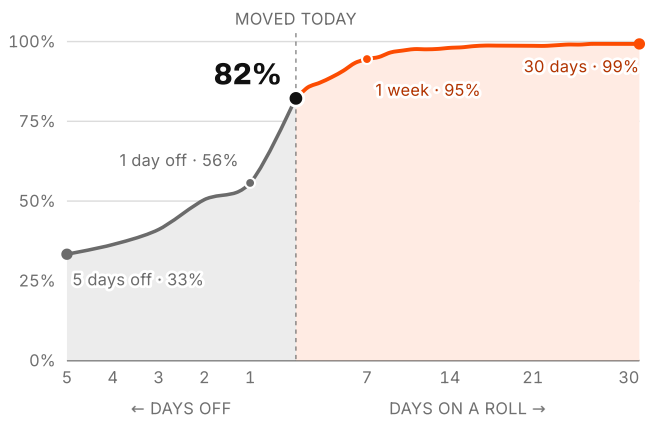

33%
after five days off

56%
after one day off

GIVEN TODAY, THE CHANCE OF TOMORROW

	TOMORROW YOU MOVE	TOMORROW YOU REST
If you moved today	82%	18%
If you rested today	50%	50%

BIG DAYS AND SMALL DAYS

The long days carry a lot.

The surprise here is that my total was not built by big days. My long days, over 20 km, carry about as much distance as my quieter half of days together, and no single day, not even the marathon, moves the total much. Most of my kilometres come from ordinary days of 10 km or more: 74% of the distance from less than half of my days. The short days fill the gaps and keep the habit alive.

SHARE OF ALL DISTANCE ON FOOT

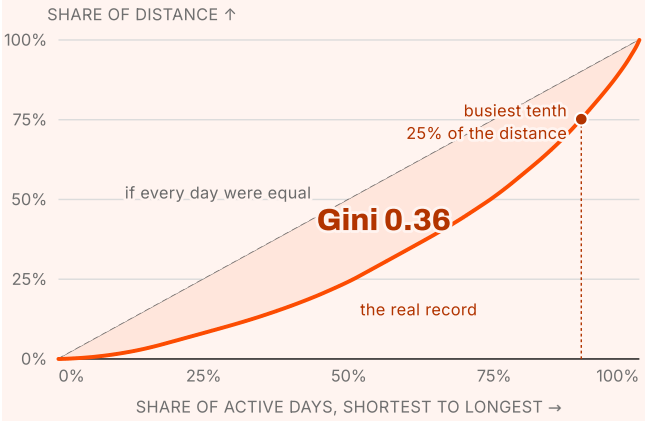

24% the quietest half of days

42% the busiest fifth of days

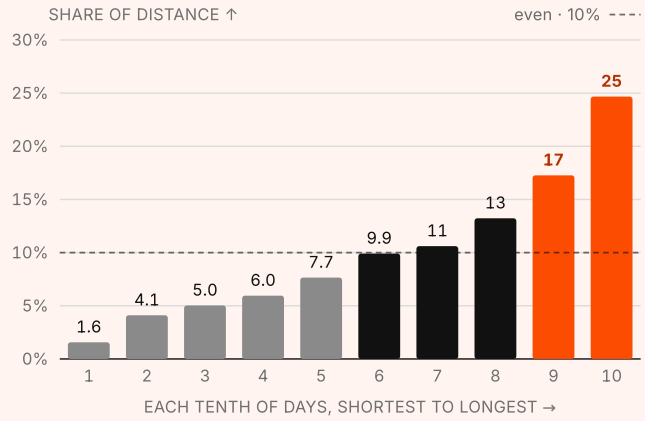

25% the busiest tenth of days

4% the 13 biggest days

EVERY DAY, ADDED UP

EACH TENTH OF DAYS, BY ITS SHARE

Same time, fewer outings.

I did not find more time. I used it differently. On a day out I still move for about 79 to 106 minutes, the same in every year. In 2021 I split it into two sessions, often a run in the morning and a walk in the evening. Over the years the two became one longer outing, often a long walk. The same hour, but each outing now goes further.

HOW THE DAYS WERE SPLIT

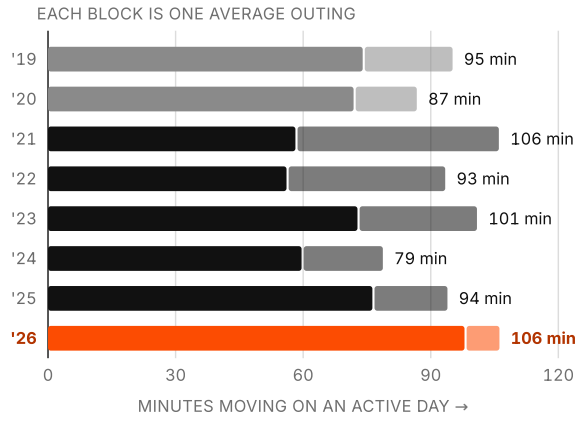

57%
of active days doubled up in 2021

A TYPICAL ACTIVE DAY, YEAR BY YEAR

DAYS WITH TWO OR MORE OUTINGS

The climbing is in two regions.

Tanzania is my training ground, and the places where I live are flat. Dodoma, where I go out most, gives almost no climbing, so for the hills I travel to Kilimanjaro and Morogoro. Those two regions hold only a small part of my outings but most of my metres. My trips across the border, to Kenya, Malawi, South Africa and Rwanda, were short, a few days each, plus three outings I count as others.

INSIDE TANZANIA: SHARE OF OUTINGS AND OF CLIMB

Walks took over.

My story started with running and turned into walking. In 2019 almost every outing was a run, most of them on the treadmill. Since 2022 I have walked more often than I have run, every year, and my walks grew from short ones under 3 km in 2021 to about 9 km now. From the end of 2021 the hills came in too, with trail runs and hikes. I did not plan this change. It happened slowly, and the log only showed it to me later.

SHARE OF ALL OUTINGS

41% walks

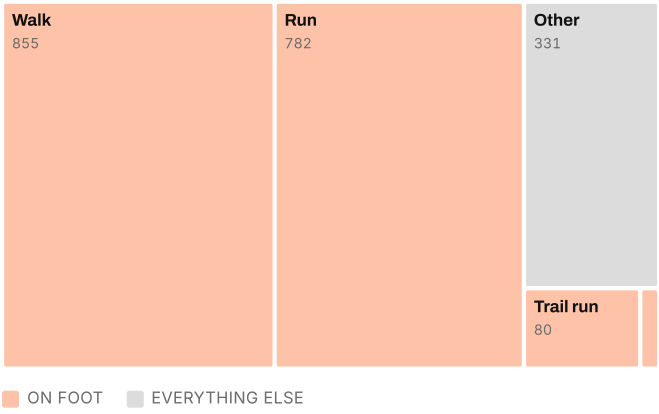

38% runs

5% trail runs and hikes

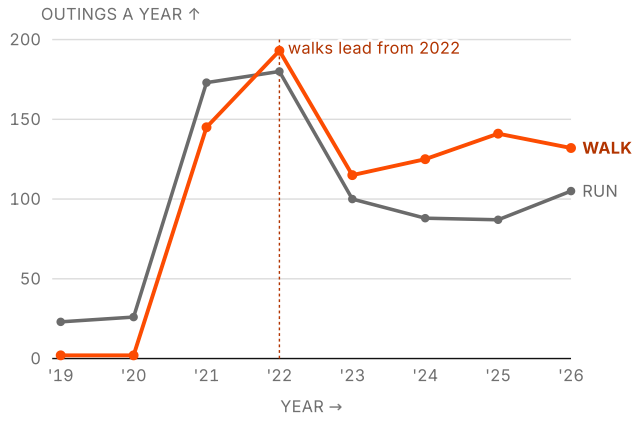

16% other activities

EVERY OUTING, BY SPORT

84% of all my outings are on foot.

WALKS AGAINST RUNS, YEAR BY YEAR

Mornings and evenings.

My outings live around the working day, early in the morning and in the evening, with 6pm the busiest hour. Each sport found its own time. Walks fill the evenings, the treadmill takes the early mornings and late nights, and trail runs and hikes wait for the weekend. But the habit itself does not wait for the weekend. Saturday is my busiest day and Tuesday the quietest, and the gap between them is small.

WHEN OUTINGS START

in September

SHARE OF DAYS ACTIVE, BY MONTH

EVERY MONTH OF THE RECORD

Less treadmill every year.

I came out of the treadmill room slowly. In the early years most of my running was indoors, early in the morning or late in the evening, and my only full marathon was run there too. My walks were almost always outside, so the change is my running moving onto the roads and trails. Only recently has more of my running been outside than inside. Of the 8,288 km I have run, 6,905 km were still on the treadmill.

of all walks

INDOORS AND OUTDOORS, YEAR BY YEAR

SHARE INDOORS, BY SPORT

Where the height comes from.

Running gave me the kilometres, but walking and the hills gave me the height. So much of my running was on a flat treadmill that it carries very little of my climbing. The climbing came slowly, on foot, at walking pace. For every kilometre a hike climbs about nine times as much as a walk, and my biggest climbs all came in the mountains of Morogoro, Kilimanjaro and Manyara.

CHAPTER 3

03 Sports

My four sports on foot

THE WHOLE PICTURE

Runs cover the ground.

I keep the treadmill apart because in my log it behaves like a different sport: flat, quick and always the same. In the chart below it sits alone on the left. The walks gather in the middle, and the trail runs and hikes climb high on the right, the few outings that carry so much of my climbing. Most of my days are runs and walks, and the hills come when I can travel to them.

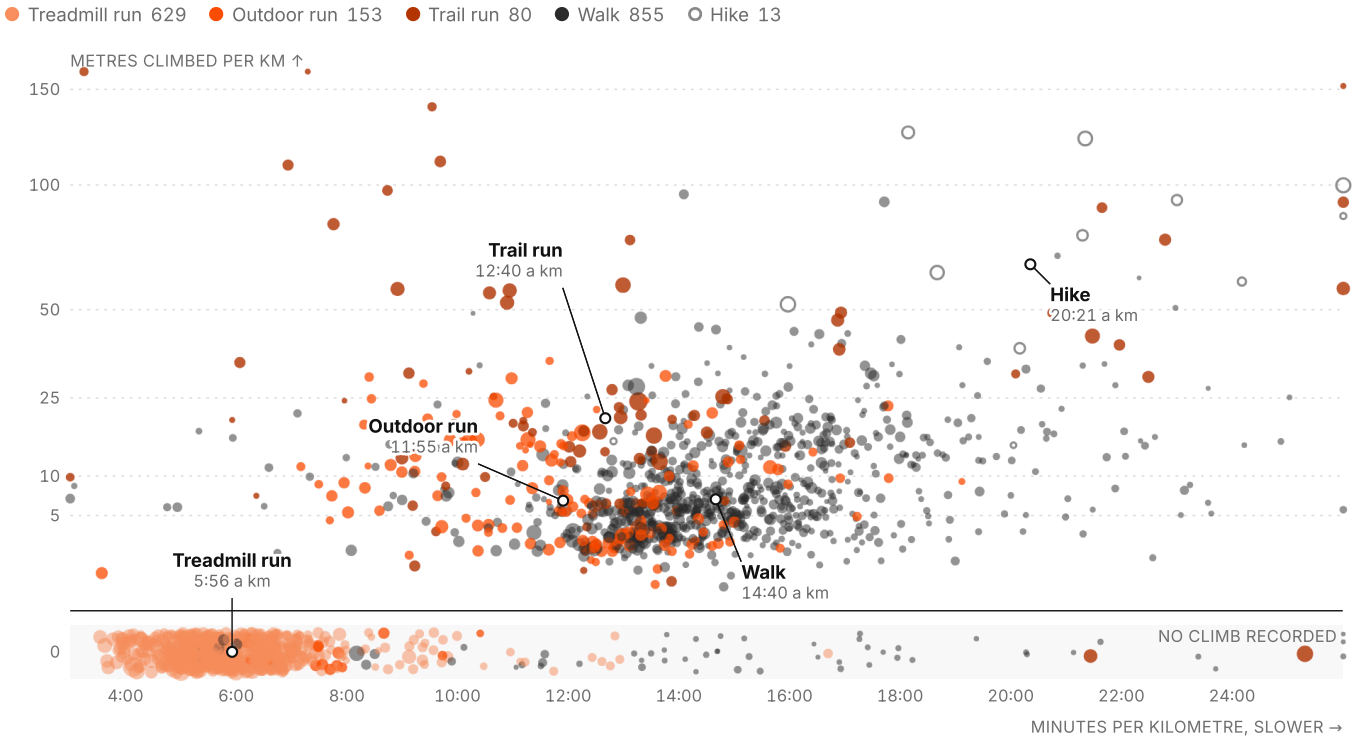

THE FOUR SPORTS ON FOOT

1,730
outings on foot, of 2,061 in all

13,237 km
covered on foot

84,367 m
climbed on foot

2,105 h
moving on foot

Walks took more hours.

Runs and walks share my time almost equally, but they give me different things. I have done about as many of each (782 and 855) and spent about the same hours on each, yet a run takes me further, about 10.1 km against 4.0 km for a walk. The hills belong to the small sports. Trail runs and hikes are only 93 of my outings, but they carry a big part of my climbing.

EACH SPORT'S BIGGEST SHARE

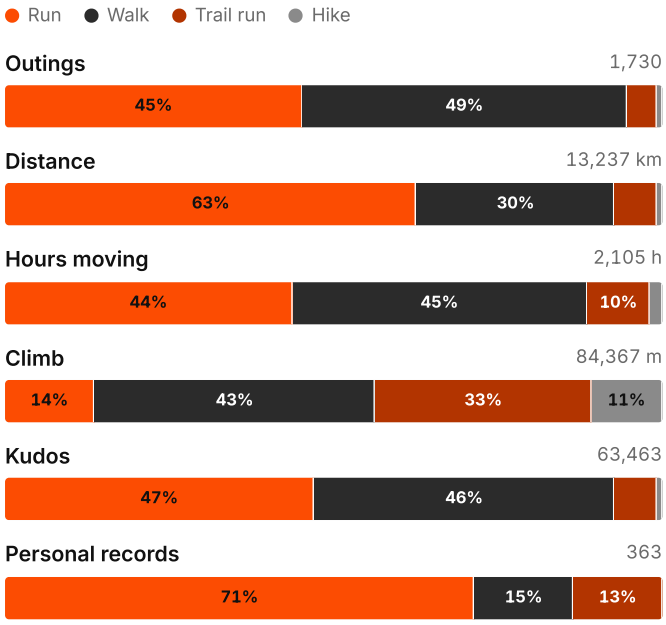

63%
of the distance was run

45%
of the hours were walked

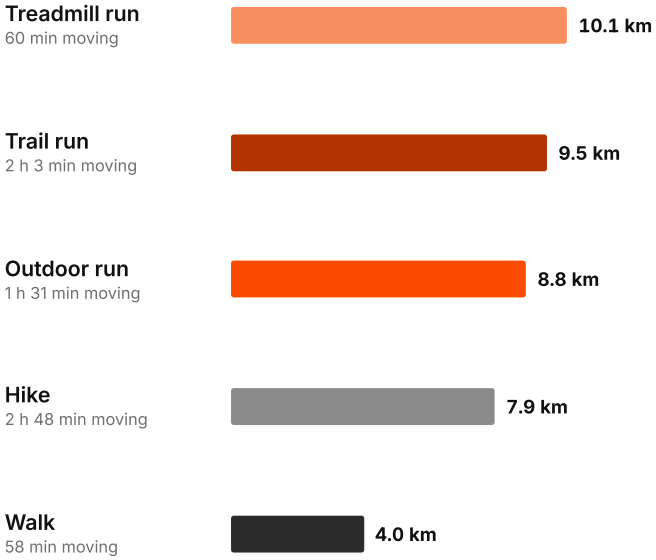

33%
of the climb came on trail runs

11%
of the climb came on 13 hikes

EACH SPORT'S SHARE OF THE RECORD

THE TYPICAL OUTING OF EACH

In 2026, walks went further.

For years running carried my distance. In 2021 I walked only 473 km. Since then my running came down and my walking went up, little by little, year after year, until the two lines crossed. Trail running came in from the end of 2021, when I started going to the hills.

2026 SO FAR, AGAINST THE RUNNING PEAK

1,099 km
walked in 2026 so far

1,065 km
run in 2026 so far

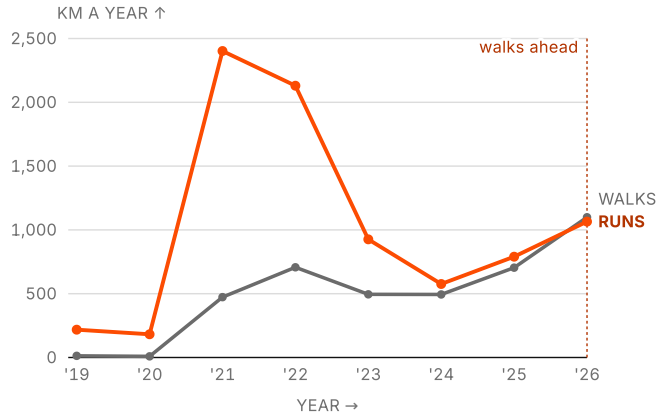

2,402 km
run in 2021

303 km
on trails in 2023, the trail peak

KILOMETRES ON FOOT, YEAR BY YEAR

WALKING AGAINST RUNNING

83% of running was indoors.

The treadmill is where my running started. I used it early in the morning or late in the evening, and in the first years nearly all my running was there. Each year since, more of it has moved outside. The treadmill also left a mark in my numbers: I tend to stop when the screen shows a round number, so my treadmill runs bunch up at 5, 10, 15 and 21 km. Outside, my runs end at many different distances.

RUNNING INDOORS

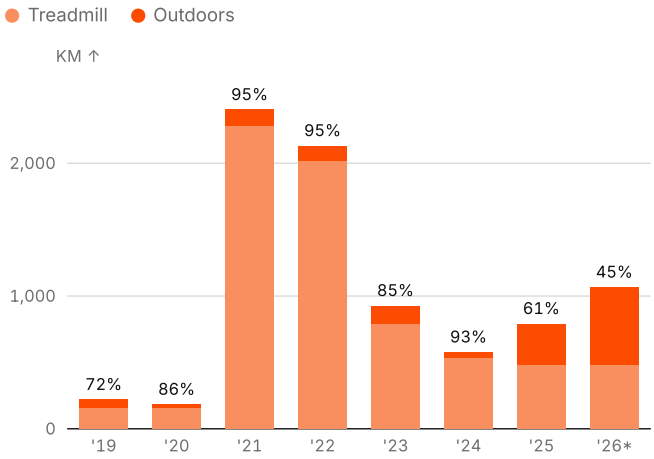

629
treadmill runs

95%
of running km indoors in 2021

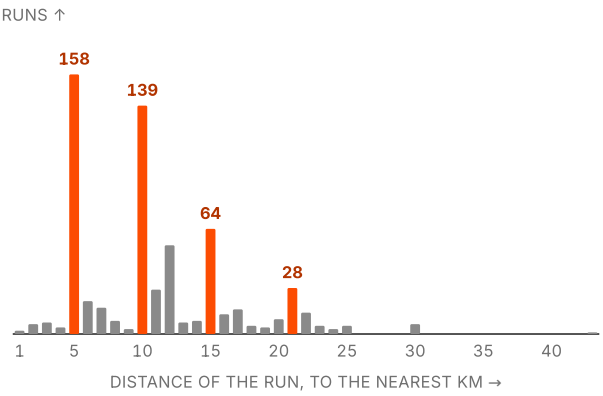

45%
indoors in 2026 so far

45%
of treadmill runs stopped on a whole 5 km

RUNNING KILOMETRES, INDOORS AND OUT

WHERE THE TREADMILL STOPPED

Each sport has its pace.

The treadmill makes me look fast. My usual treadmill kilometre takes 5:56, but outside a run takes me 11:55, about twice as long, which is closer to a walk (14:40) than to the treadmill. Pace here is the minutes I take for one kilometre. My quickest treadmill year was 2021, at 5:05, and in 2026 so far I am at 5:44.

MEDIAN MINUTES PER KILOMETRE

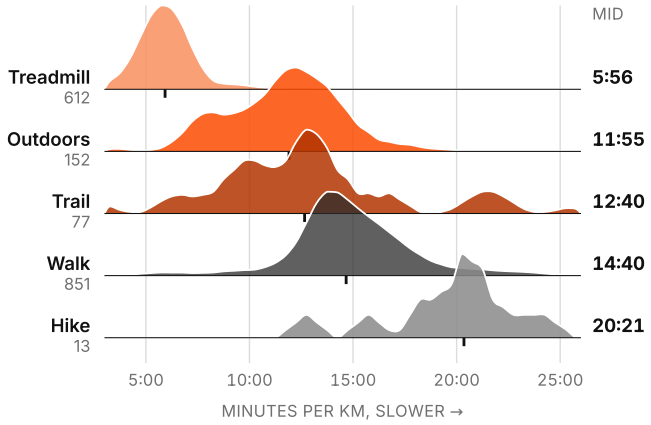

5.9 min
a treadmill km

11.9 min
an outdoor run km

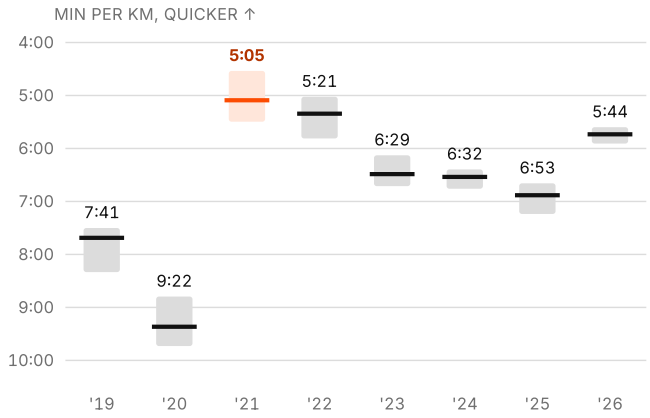

14.7 min
a walking km

20.4 min
a hiking km

EVERY OUTING BY PACE

TREADMILL PACE, YEAR BY YEAR

The typical walk grew.

My walks changed more than anything else in my log. From 2021 to 2024, about half of them were short, under 3 km. In 2025 that started to change, and now almost every walk is a proper outing of many kilometres. Five of them have gone a half marathon or further.

THE WALK, 2021 AGAINST 2026

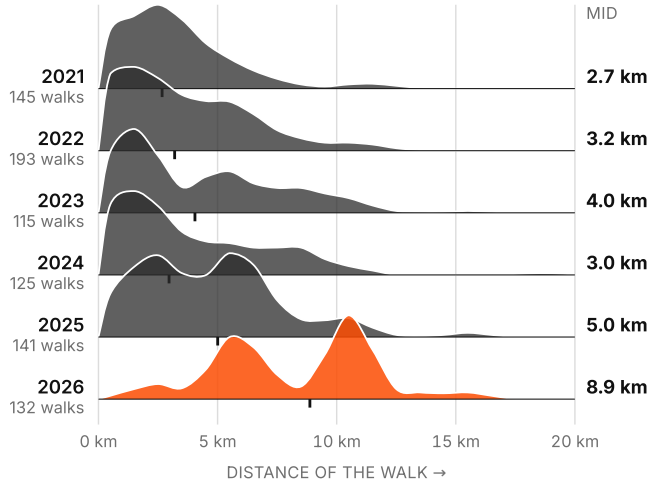

2.7 km
the median walk of 2021

8.9 km
the median walk of 2026 so far

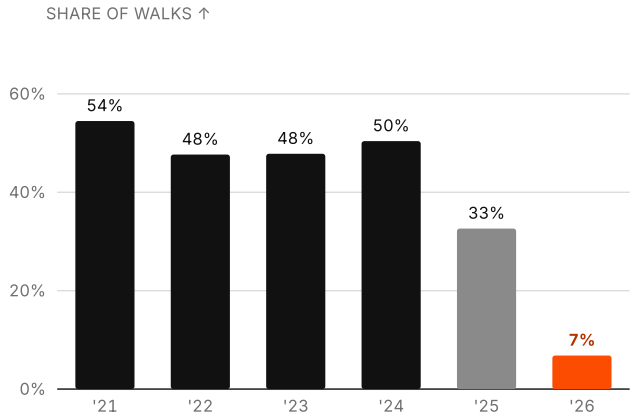

54%
of 2021 walks under 3 km

7%
of 2026 walks under 3 km

EVERY WALK BY DISTANCE, YEAR BY YEAR

SHARE OF WALKS UNDER 3 KM

Long days moved outdoors.

My long days left the treadmill. Up to 2022, every half marathon or longer was indoors. My first one outside came in January 2023, and now most of my long days are on roads, trails and long walks. The 42.7 km I ran on a treadmill in May 2022, a full marathon indoors, is still my longest.

HALF MARATHON OR LONGER

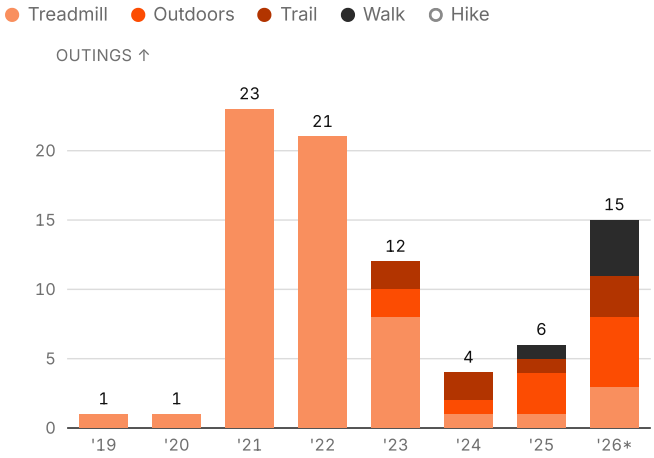

83
outings of 21.1 km or more

71%
of them on a treadmill

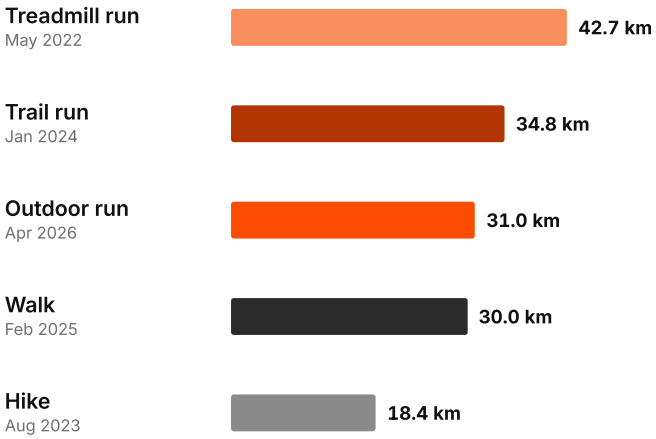

15
in 2026 so far

12
of those 15 outside

OUTINGS OF 21.1 KM OR MORE, YEAR BY YEAR

THE LONGEST OF EACH

Hikes climb the most.

Climbing is slow work for me, and it happens on foot. An outdoor run climbs about 8 m for every kilometre and the treadmill nothing, so my walks, with 30% of the distance, did 43% of my climbing. My biggest climb was a 16.1 km hike in Mar 2025.

METRES CLIMBED FOR EACH KILOMETRE

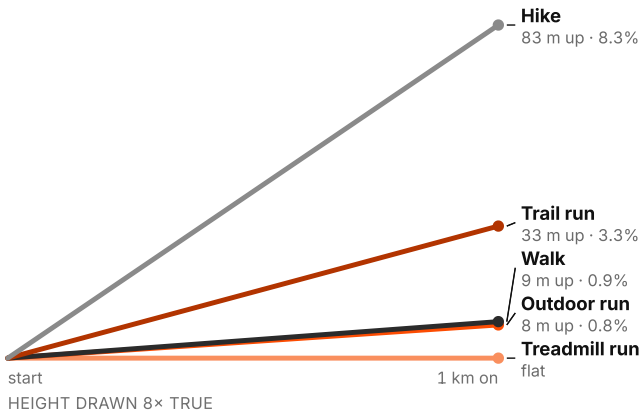

83 m
per km on a hike

33 m
per km on a trail run

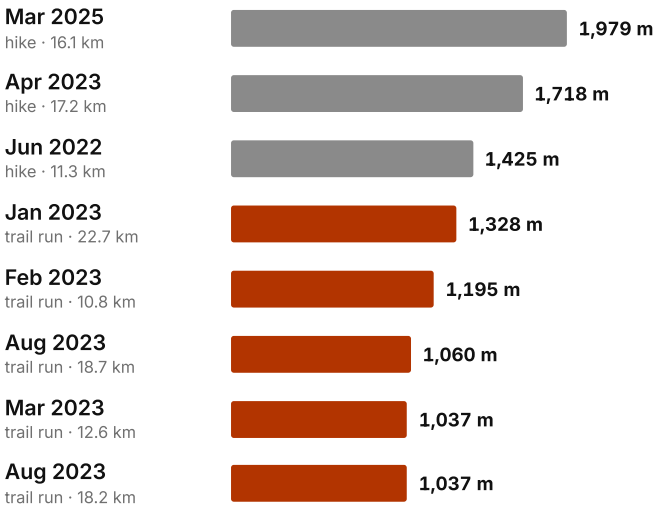

9 m
per km on a walk

1,979 m
my biggest single climb

IF EACH SPORT WERE A ROAD

THE EIGHT BIGGEST CLIMBS

I drew the slopes steeper than they really are.

Treadmill runs at night.

Each sport has found its own place in my day. The treadmill is busiest at 7am and again late in the evening. Walks come around 5pm, after the working day. Outdoor runs start early, around 6am, or in the late afternoon. Trail runs and hikes need a free day, so they wait for the weekend.

HOURS AND DAYS

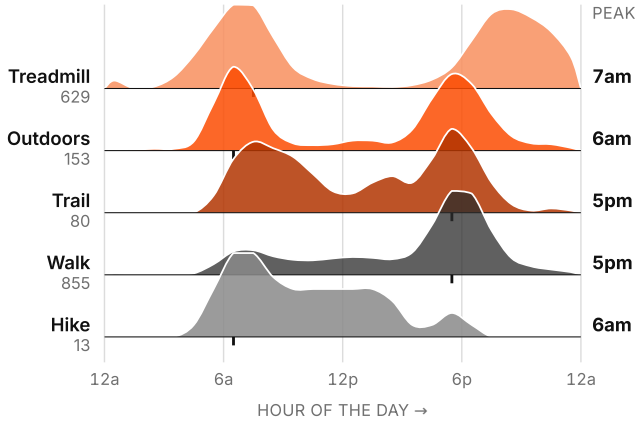

37%
of treadmill runs after 8pm or before 5am

48%
of walks between 4 and 7pm

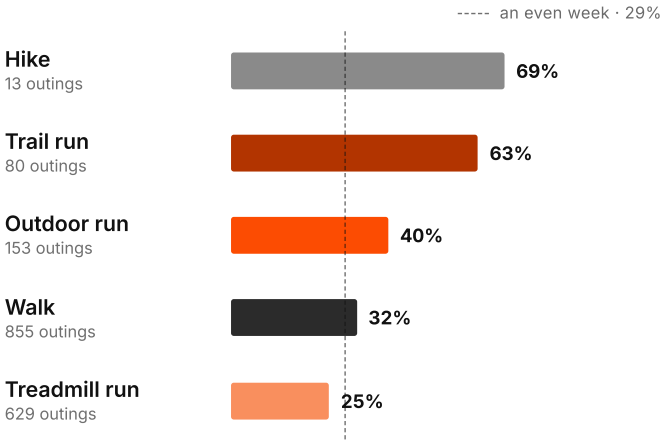

63%
of trail runs at the weekend

25%
of treadmill runs at the weekend

THE HOUR EACH OUTING STARTED

SHARE OF EACH ON A SATURDAY OR SUNDAY

A run and a walk, hours apart.

In the early habit years I often did two things in one day: a run in the morning and a walk in the evening. They were rarely together, only 14 pairs were less than half an hour apart. As the habit settled, these double days became rare, and one longer outing took their place.

DAYS WITH BOTH

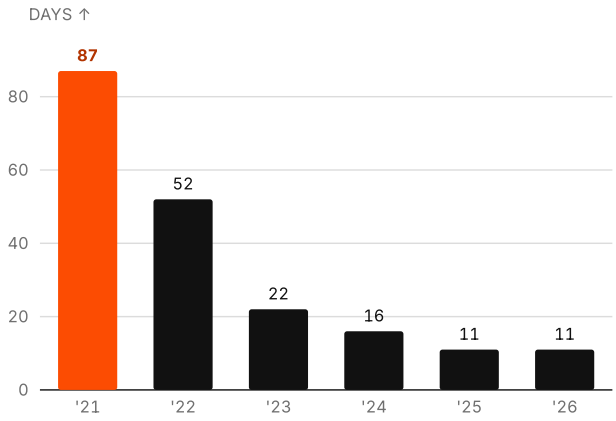

199 days

DAYS WITH A RUN AND A WALK, YEAR BY YEAR

TIME BETWEEN THE TWO

Treadmill runs work hardest.

The treadmill works my heart the hardest, and walking the least. Relative effort is Strava's score for how hard my heart worked, and per hour the treadmill comes first. I left out hikes, because too few of them have a score. The people who follow me see it differently: my trail runs get the most kudos. Outdoor runs set the most personal records, because Strava needs GPS for them.

EFFORT PER HOUR, KUDOS AND RECORDS PER OUTING

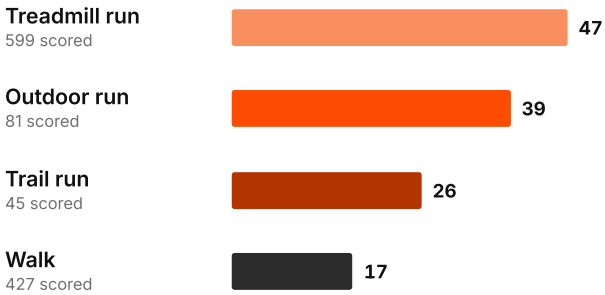

47
effort per hour, treadmill run

17
effort per hour, walk

51
kudos per trail run

1.5
personal records per outdoor run

RELATIVE EFFORT PER HOUR MOVING

KUDOS PER OUTING

Longer runs, quicker km.

Two small findings surprised me. On the treadmill, my longer runs were quicker per kilometre. My usual 5 km went at 6:28 a km and my usual 21 km at 5:18. And running and walking never fought for my time. A big running week did not mean less walking.

FOUR NUMBERS FROM THE FITS

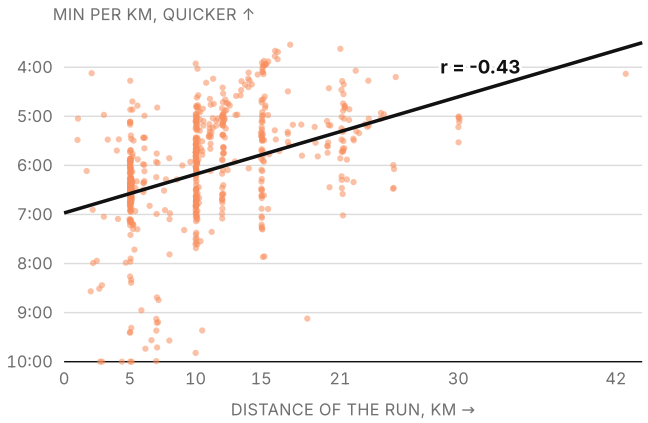

−0.43

CHAPTER 4

04 Records

My longest, highest and hardest days

Only my own records, measured against myself.

THE DISTANCE RECORD

Against my own longest.

My distance record moved fast in the early days, and then it stopped. The first was a 5.1 km treadmill run, on my first day on foot. Then came 10 km the next day, a half marathon in December 2019, 30 km in August 2021 and a full marathon on a treadmill on 1 May 2022. That one still stands. The closest I have come since is 34.8 km, on a trail run.

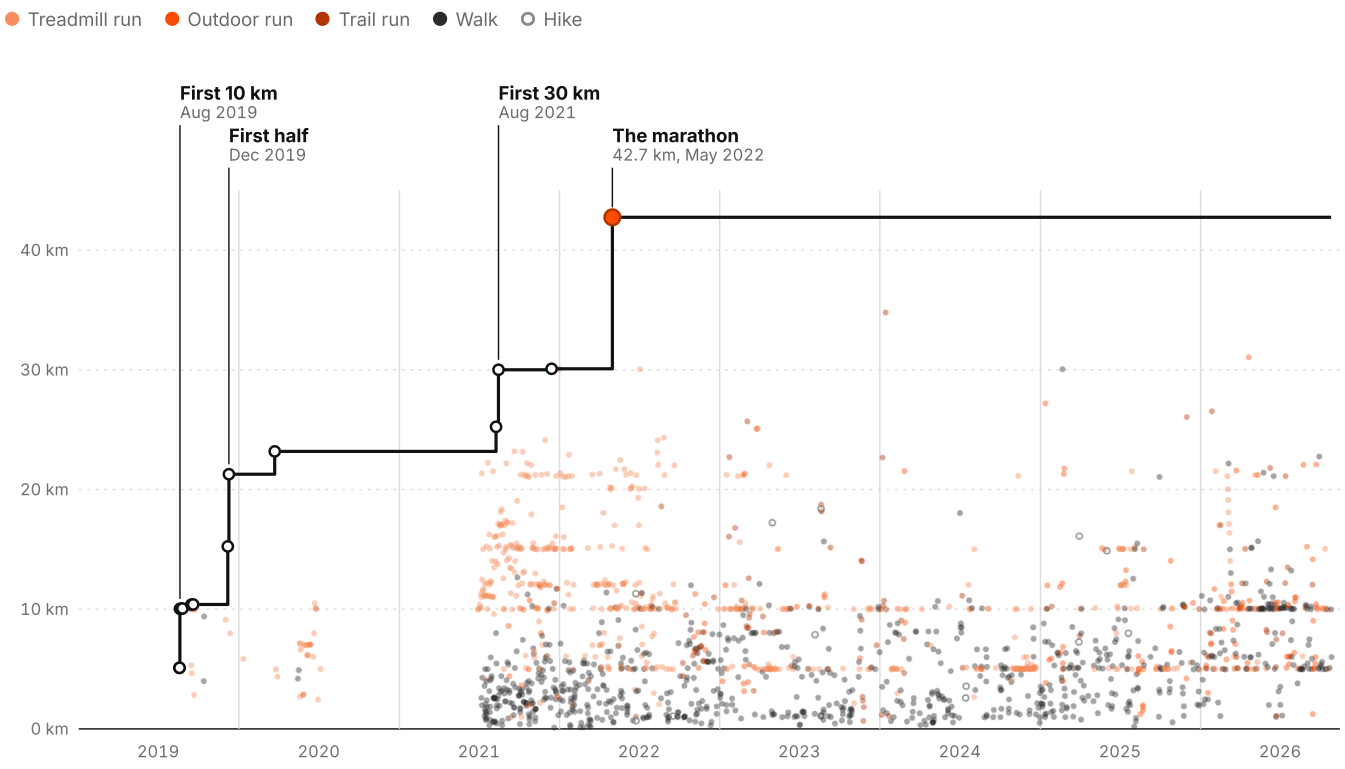

THE LONGEST OUTING ON FOOT

14
times the record broke

42.7 km
the record now

1,638 days
it has stood

1,218
outings since, none longer

The longest days.

My longest days moved from the treadmill to the outdoors. The ones past 30 km on the treadmill all came between Aug 2021 and Jul 2022. Since then every one has been outside: a 34.8 km trail run with 841 m of climb, a 31.0 km outdoor run and one long walk.

LONG OUTINGS ON FOOT

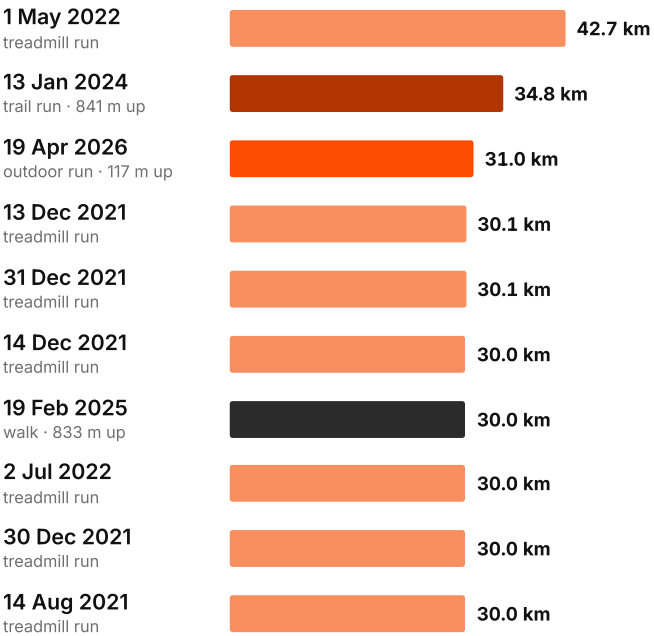

83
outings of 21.1 km or more

10
outings past 30 km

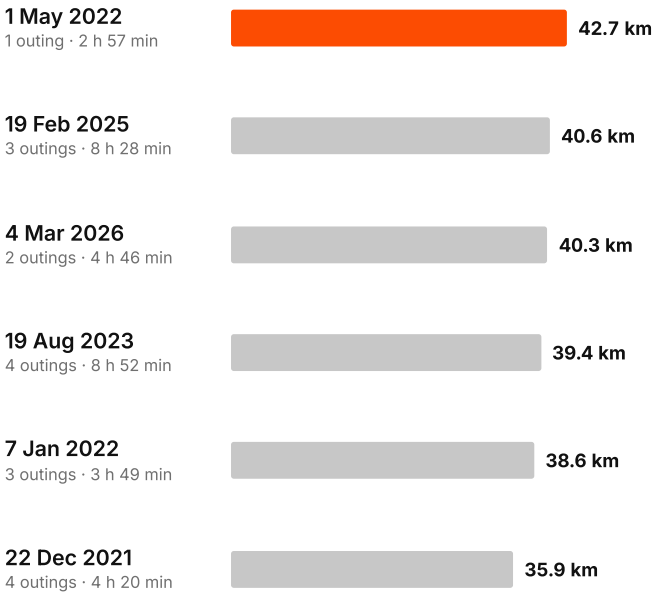

7
of those on a treadmill

30.0 km
the longest walk

THE TEN LONGEST OUTINGS

THE BIGGEST DAYS ON FOOT

From walks to hikes.

My climbing records tell the story of finding the hills. The first ten were all walks, up to 665 m in May 2022. After that the hikes took over, and each new record needed a bigger mountain. On my biggest day of climbing, four outings together went past any single climb.

THE BIGGEST CLIMB ON FOOT

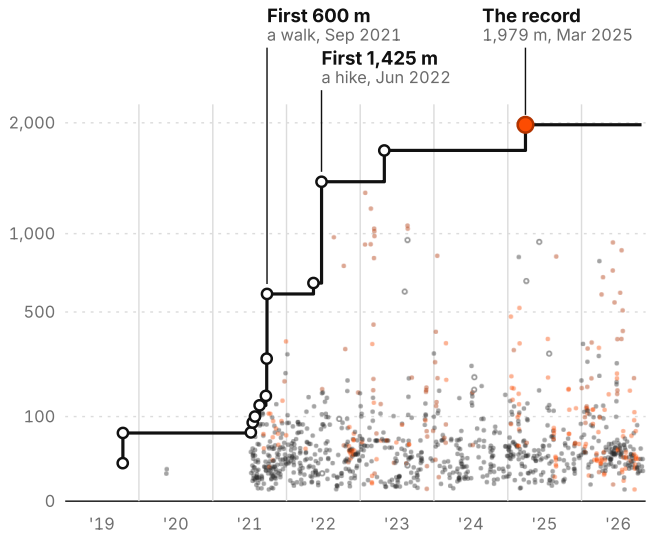

13
times the record broke

1,979 m
the record now

575 days
it has stood

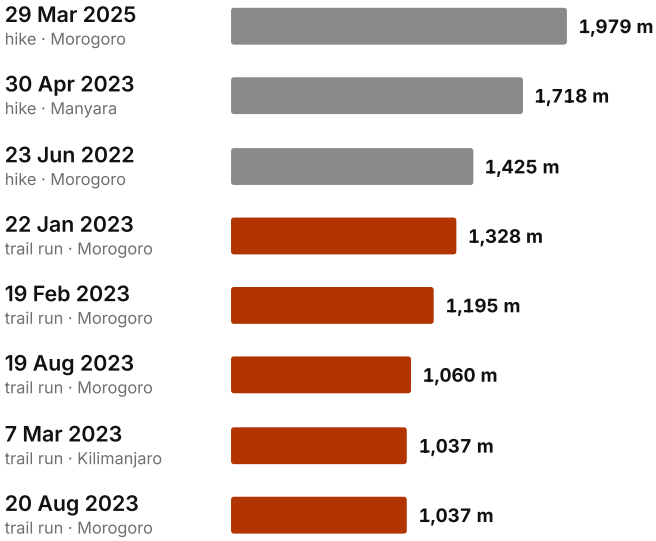

2,074 m
in one day, 19 Aug 2023

THE CLIMBING RECORD OVER TIME, IN METRES UP

The bottom of the scale is stretched so the small climbs show.

THE EIGHT BIGGEST CLIMBS

March 2023 climbed the most.

Distance and climbing came in different seasons of my life. All six of my biggest months for distance were in 2021, when I ran almost every day on the treadmill. The climbing came later, in the months I went to the mountains, and from far fewer kilometres, only 297 km in that month.

THE BIGGEST STRETCHES

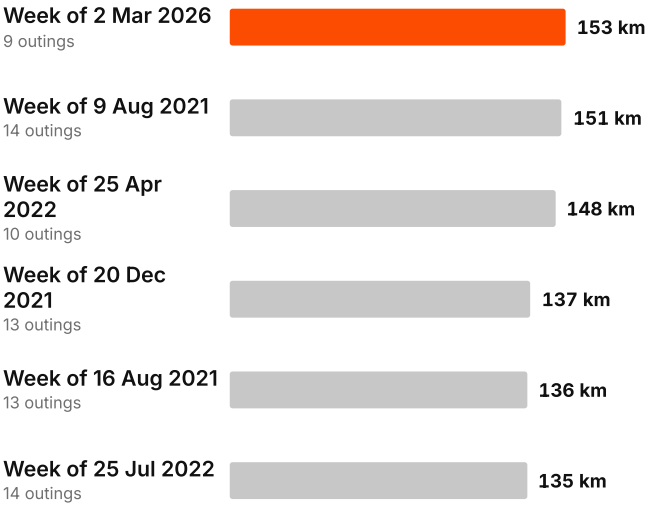

153 km
in the week of 2 Mar 2026

559 km
in August 2021

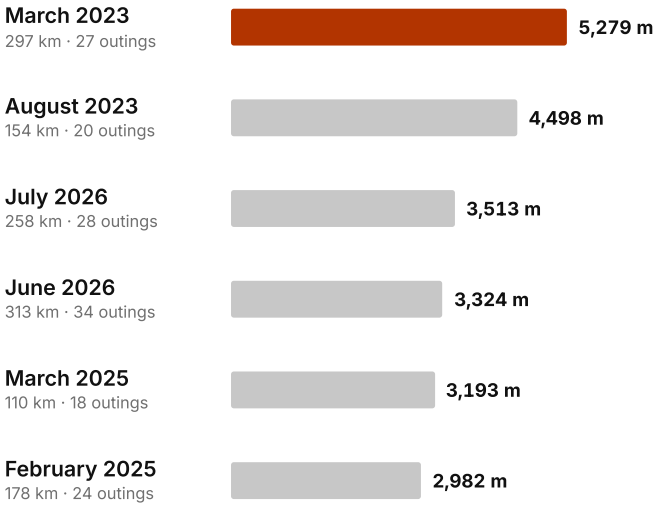

5,279 m
climbed in March 2023

60%
of an Everest in that month

THE BIGGEST WEEKS BY DISTANCE

THE BIGGEST MONTHS BY CLIMB

The kilometres came faster.

Pole pole ndio mwendo, slowly is the way. I passed 1,000 km on foot in August 2021, two years after my first upload, with the long gap inside that time. I passed 10,000 km in July 2025. The last 2,500 km took 371 days. I also count my climbing in Everests, 8,849 m each, and each one now comes much quicker than the first.

THE RUNNING TOTALS

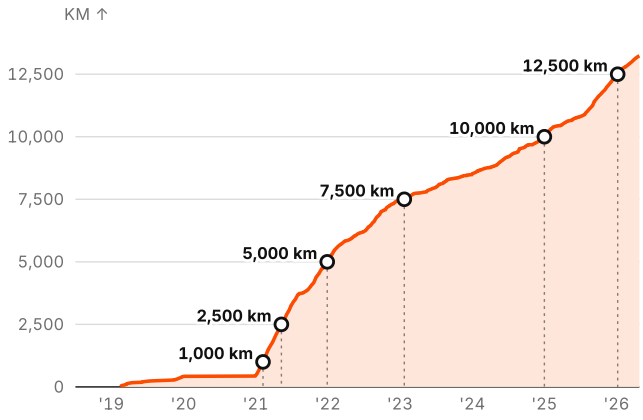

13,237 km
on foot in all

9.5
Everests climbed

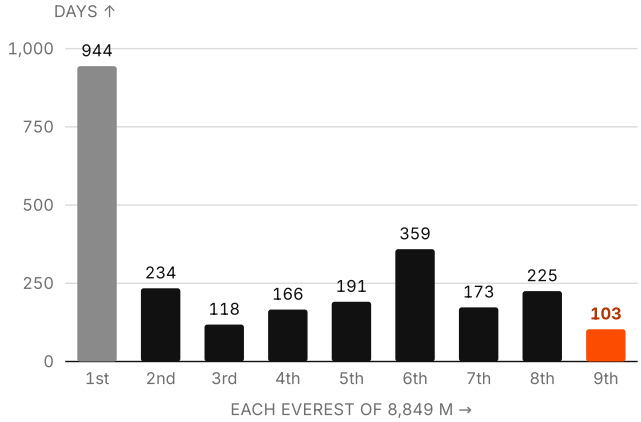

944 days
for the first Everest

103 days
for the ninth

KILOMETRES ON FOOT, ADDING UP

DAYS TO CLIMB EACH EVEREST

Beating my own times.

Most of my personal records came once I stepped outside. A personal record here means I beat my own earlier time on a Strava segment, a short timed stretch of road or trail. They are small wins, a few seconds on a stretch I know. The treadmill gives almost none, because segments need GPS, so they grew as my running moved onto the roads.

SEGMENT BESTS ON FOOT

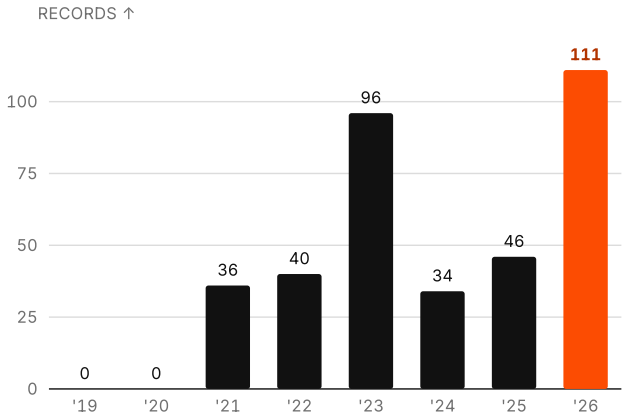

363
personal records in all

118
outings that set at least one

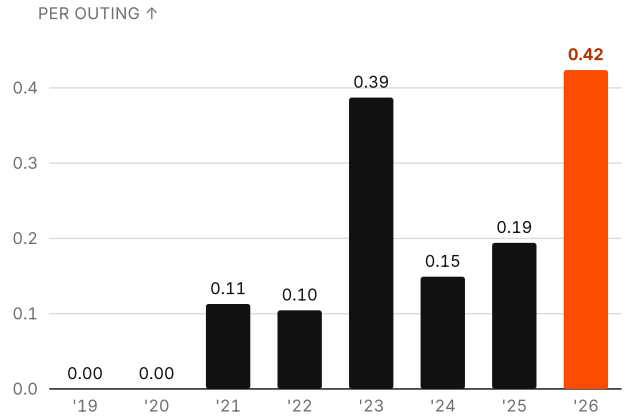

111

Three places carry most of it.

Three places carry most of my story: Dodoma, Dar es Salaam and Kilimanjaro. Dodoma is where the habit took hold in 2021 and where I have spent the most days out. Dar es Salaam is my other home, and in 2026 it is where I go out most. Kilimanjaro and Morogoro are where I go for the hills. The other regions came mostly from trips.

INSIDE TANZANIA

184 km
on foot abroad

57 days
out abroad

OUTINGS IN EACH COUNTRY

KILOMETRES ON FOOT IN EACH COUNTRY

Fewer outings without GPS.

My indoor outings, most of them treadmill runs, have no start point. In my first year almost everything was indoors. As I moved outside, they became a smaller part of each year, and the maps above slowly filled in.

OUTINGS WITH NO GPS START

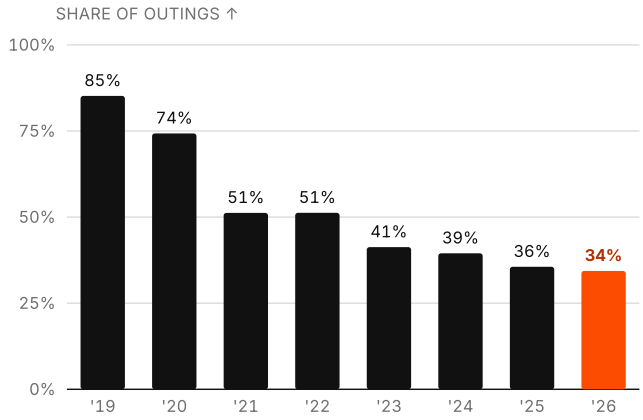

906
outings in all

646
treadmill runs

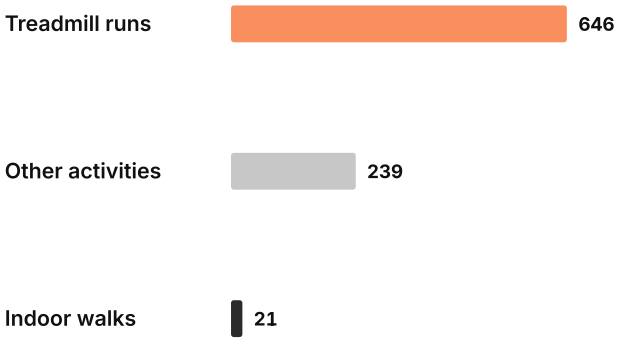

85%
of 2019 outings

34%
of 2026 outings so far

SHARE OF EACH YEAR WITH NO GPS START

WHAT THE OUTINGS WITH NO PLACE WERE

How widely they spread.

I wanted one number for how spread out my outings were across Tanzania, so I used the effective number of regions. If a year counts as four, it is as if my outings were shared equally between four regions. In my narrowest year, Dodoma had 65% of my outings. Later years spread out as I travelled and as my home base moved.

HOW THE OUTINGS SPREAD

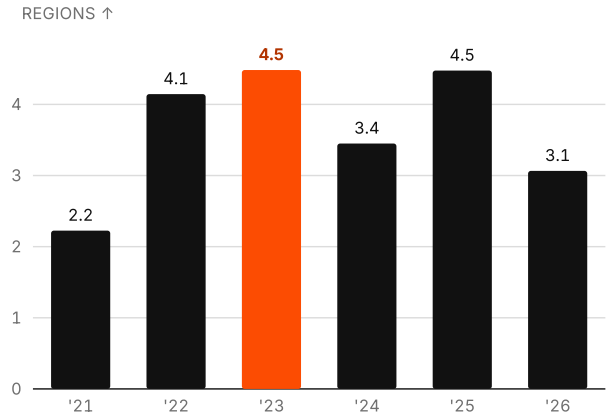

4.5
effective regions, all years

4.5
in 2023, the widest

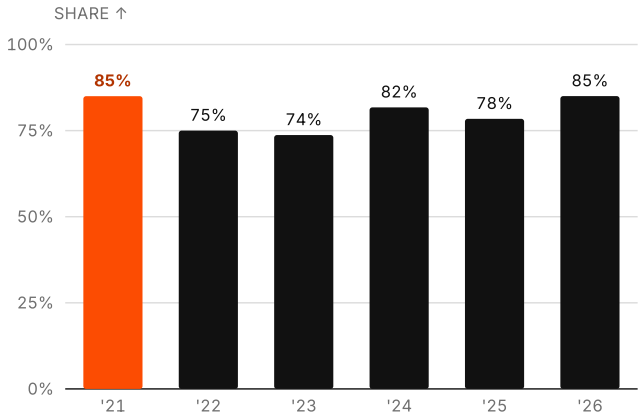

2.2
in 2021, the narrowest

78%
of outings in the busiest three

EFFECTIVE NUMBER OF REGIONS, YEAR BY YEAR

SHARE OF THE OUTINGS IN THE TOP THREE REGIONS

Years with fewer than 50 outings in Tanzania are left out.

FROM THE LOGBOOK

“Taking ownership of your life is not easy, and living a life of discipline is not easy. In fact, it is hard. That is why it works.”

IV

The long view

Everything in the order it happened, and the targets I set myself each year.

06 **Timeline** 07 **Goals**

CHAPTER 6

06 Timeline

From my first upload to now

AUG 2019 TO OCT 2026

No long gap since then.

My log begins in August 2019, mostly short runs on a treadmill. For the first year I came and went, and in July 2020 I stopped completely for almost a year. What I am most thankful for is what happened after I came back in June 2021: the long gaps never returned. Since then my longest break has been ten days, and the streaks grew longer, until this one, 301 days without missing one. On the line below you can see the firsts move from the treadmill to the trails and the mountains, and eleven pairs of shoes carry me through it.

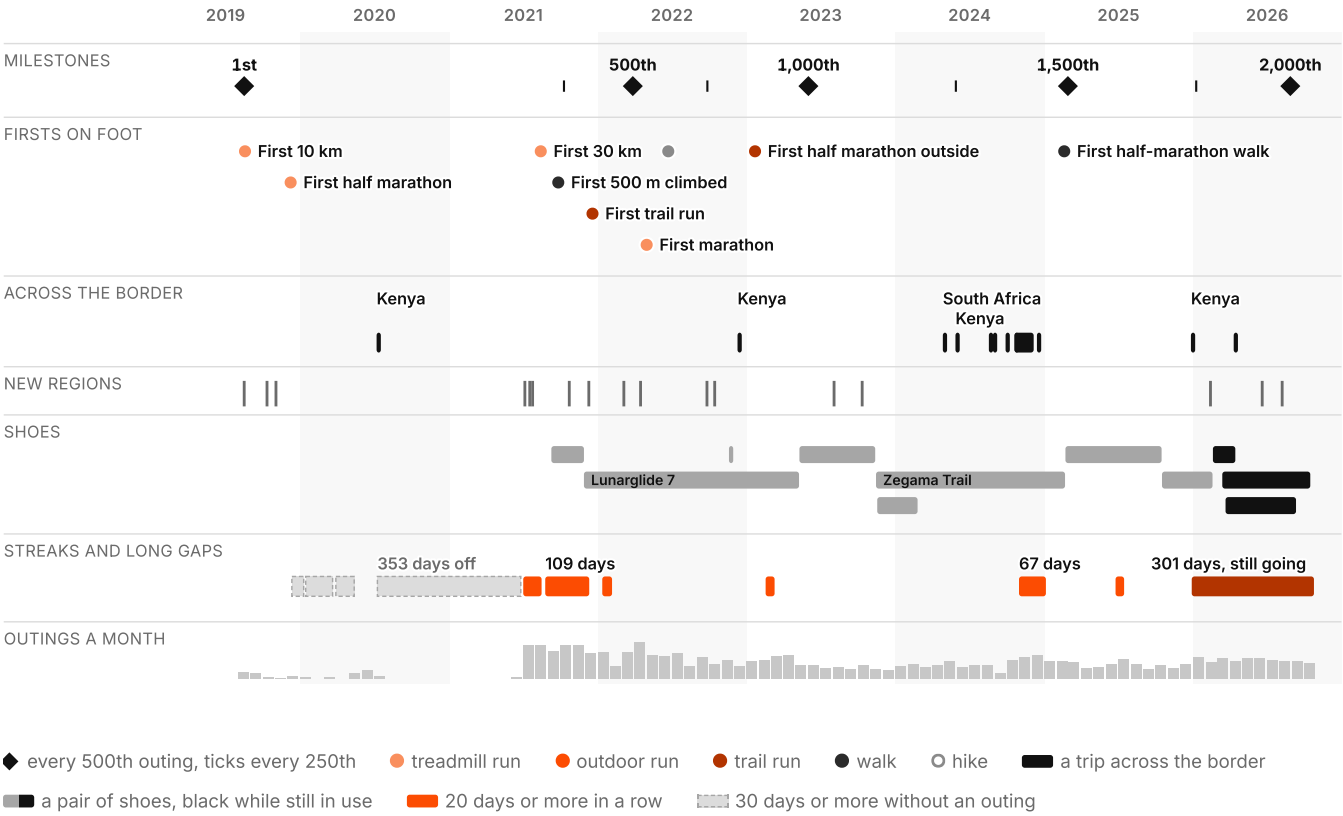

THE RECORD IN TIME

2,627 days
from the first outing to the latest

2,061
outings in that time

353 days
the silence, Jul 2020 to Jun 2021

10 days
the longest break since

◆ every 500th outing, ticks every 250th · ● treadmill run · ● outdoor run · ● trail run · ● walk · ○ hike · ▬ a trip across the border

▬ a pair of shoes, black while still in use · ▬ 20 days or more in a row · ▬ 30 days or more without an outing

Shorter breaks.

The habit made the outings come faster. My first 250 took more than two years, because the long gap falls inside them. Since then every 250 has come in less than a year, and the breaks between outings got shorter too. In 2026 so far there has been no break at all.

EVERY 250 OUTINGS

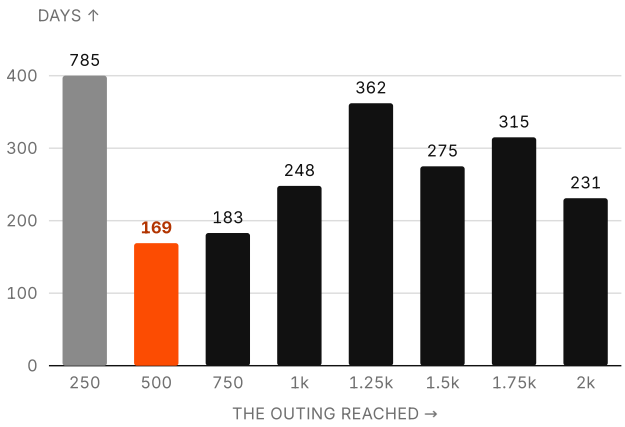

785 days
to the 250th

169 days
the quickest 250, to the 500th

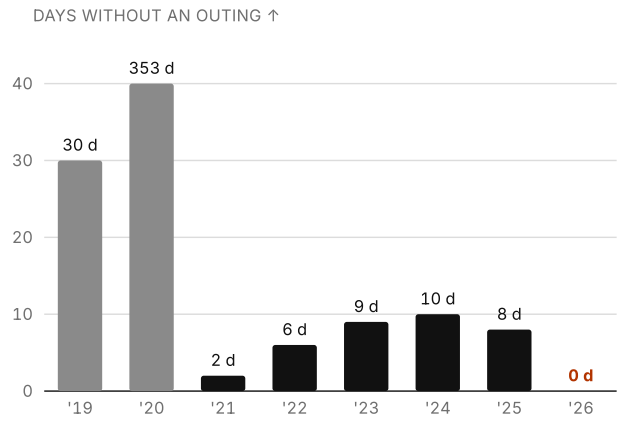

362 days
the slowest since, to the 1,250th

231 days
to the 2,000th, the latest

DAYS TO EACH 250 OUTINGS

THE LONGEST BREAK EACH YEAR

The first bar includes the long gap, so it is cut off.

From the treadmill to the hills.

My firsts follow the same path as my habit: they started on the treadmill and moved to the hills. The 10 km, the half marathon, 30 km and the marathon all came indoors. Then came the trail run, the first hike, 1,000 m of climbing in a day and a half marathon done as a walk. Each new first needs a longer day or a steeper hill, so they come slowly now.

FROM THE LOGBOOK

“Ease is a greater threat to progress than hardship.”

DENZEL WASHINGTON

CHAPTER 7

07 Goals

What I aim for each year

THREE TARGETS, EVERY YEAR SINCE 2021

Both 1,000 km rings closed.

Every year I aim for the same three things: 1,000 km walking, 1,000 km running and 24,000 m of climbing on foot. Running I have reached four times. Walking I reached for the first time in 2026. Climbing is the one I have never reached. Most of my outings are on flat ground and the hills are far, so it is the hardest of the three for me.

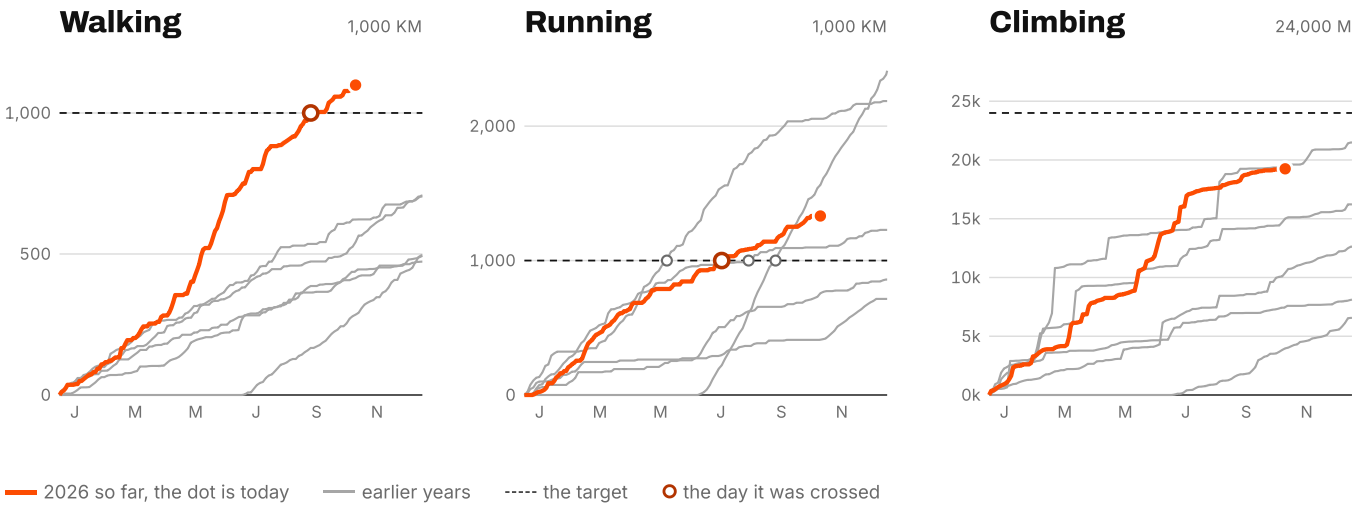

2026 SO FAR

1,099 km
walked, 110% of the target

1,331 km
run, 133% of the target

19,248 m
climbed on foot, 80% of the target

67 days
left in 2026

Running closed four times.

The rings follow my story. Running was strongest at the start: in 2021 I ran more than twice the target. As walking took over, running fell short in 2024 and 2025, while my walking stayed under 800 km a year until 2026. The climbing came closest in 2023, at 90%.

RINGS CLOSED, 2021 TO 2026

4
running, best 2,412 km in 2021

1
walking, best 1,099 km in 2026

0
climbing, best 21,490 m in 2023

1
years with both 1,000 km rings closed

EACH YEAR AS THREE RINGS

2021 1 of 3 closed

2022 1 of 3 closed

2023 1 of 3 closed

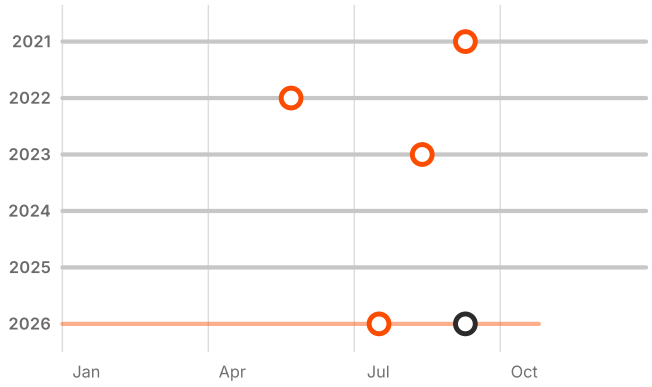

2024 0 of 3 closed

2025 0 of 3 closed

2026 2 of 3 closed so far

● outer ring, walking 1,000 km ● middle ring, running 1,000 km
● inner ring, climbing 24,000 m

THE DAY EACH RING CLOSED

Close, but not yet.

If I keep to my average, I will finish just short. I played out the rest of the year many times, using my own days of 2026 picked at random, to see how often it gets there. What worries me is my recent pace. Since 1 August I have climbed only 22 m a day.

THE CLIMB, 2026

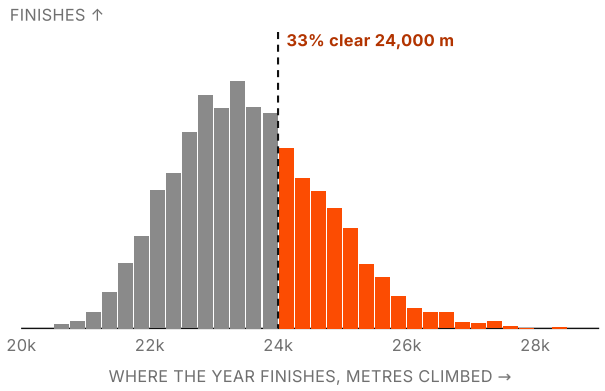

4,752 m
still to climb in 67 days

71 m
a day needed from here

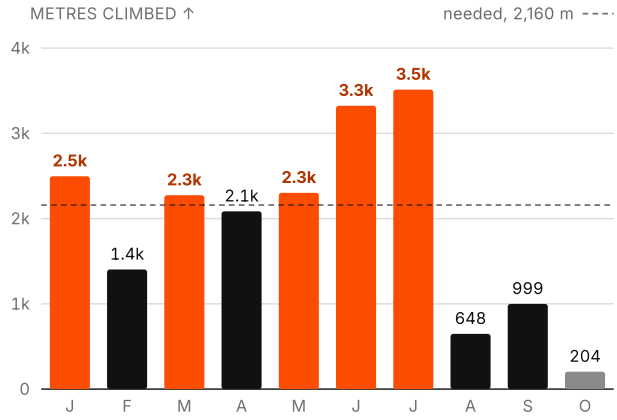

65 m
a day so far in 2026

33%
of 4,000 replays close the ring

WHERE 4,000 REPLAYS OF THE YEAR FINISH

METRES CLIMBED EACH MONTH OF 2026

A little faster each time.

It is the same half marathon each time, and each time I was a little quicker: 4:00 in 2023, 3:43 in 2024, 3:42 in 2025 and 3:38 in 2026. Most of the time I saved came from standing still less. In 2023 I stopped for 32 minutes, and in 2026 for about 6.5.

FOUR EDITIONS OF ONE RACE

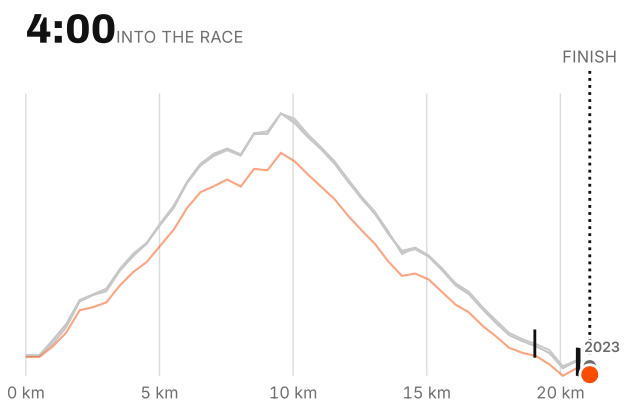

22.6 min
quicker in 2026 than in 2023

26 min
less time stopped than in 2023

2.1 km
2023 behind when 2026 finished

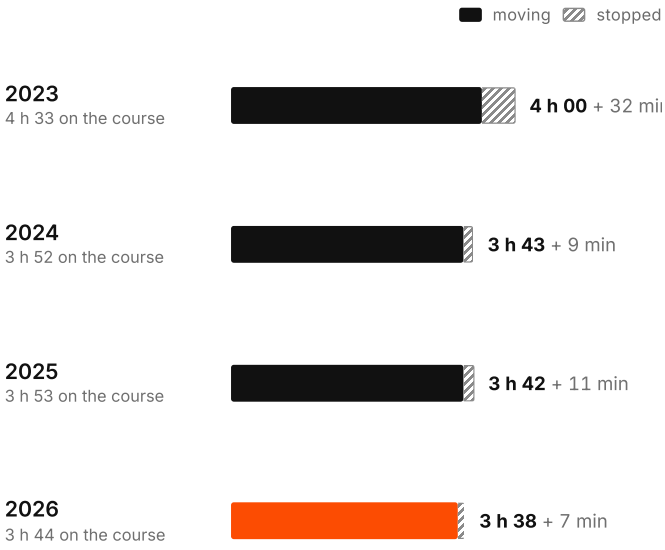

125
kudos in 2023, the most of any outing

V

The lessons

What I think seven years of logging have taught me.

CHAPTER 8

08 What It Means

What I have learned from it

I am not an expert. These are only my own lessons.

SEVEN YEARS, READ BACK

It costs time.

It is not much in one day, about the time of a long lunch, but it adds up. Most of it is walking and easy running, nothing heavy. These are the lessons I took from it.

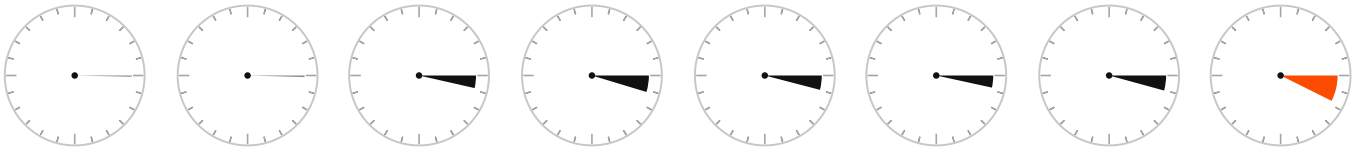

WHAT IT COST

2,382 hours
on the move since the first upload

99 days
if those hours ran end to end

71 min
a day since 2021, rest days included

106 min
a day in 2026

5 min
2019

7 min
2020

52 min
2021

68 min
2022

59 min
2023

50 min
2024

62 min
2025

106 min
2026 SO FAR

A full circle is one day.

Keep the days.

2022 was my biggest year for distance. By 2024 I was far below it, and the long days were the first to go. But my days out hardly changed. If I could keep only one thing, I would keep the days. When the distance came back in 2026, the days were already there to build on.

2022 AGAINST 2024

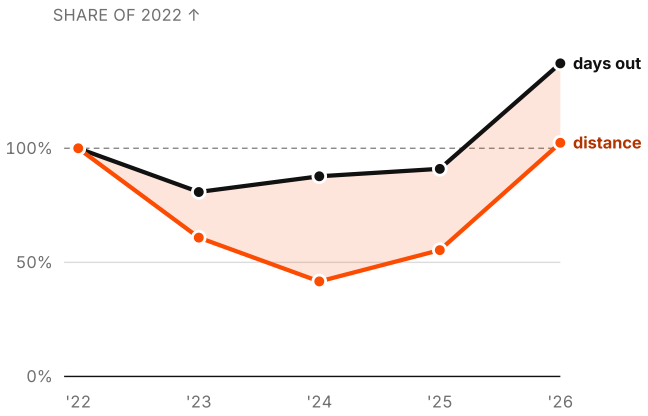

58%
less distance per day

12%
fewer days out

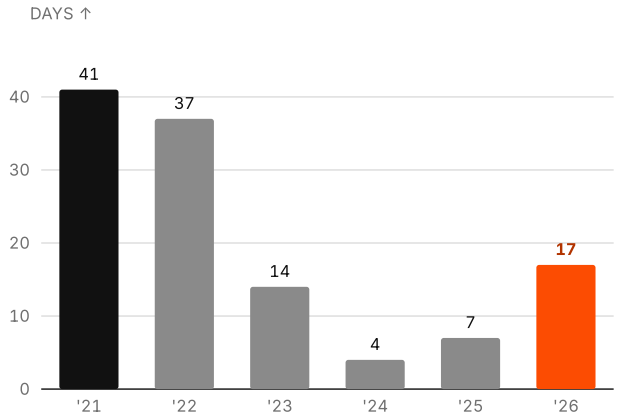

4 days
of 21 km or more in 2024, from 37

298 of 298
days out in 2026 so far

DAYS OUT AND DISTANCE, AGAINST 2022

DAYS OF 21 KM OR MORE ON FOOT

The small days count.

Haba na haba hujaza kibaba, little by little fills the measure. Many of my days were small ones, less than 2 km on foot. They add almost nothing to my distance, but I logged them all the same. Later the numbers showed me why they matter: after a small day, I was much more likely to go out again than after a full rest. On a bad day, I try to do a small version.

SMALL DAYS SINCE 2021

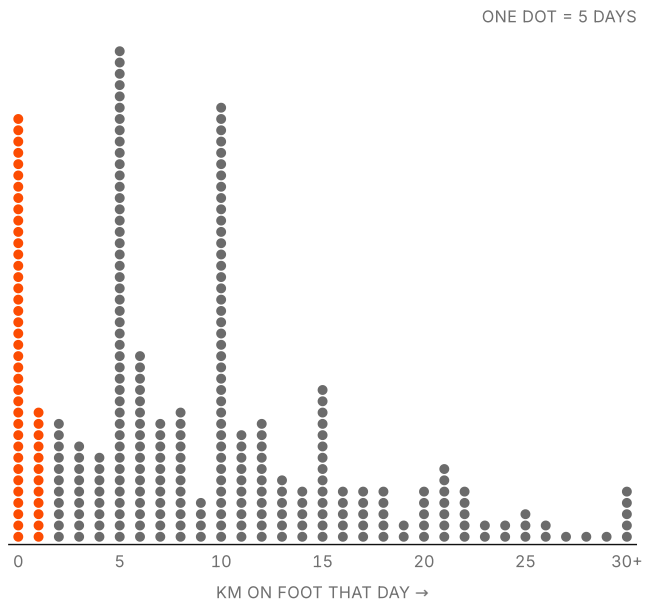

246 days
under 2 km on foot

17%
of all my days out

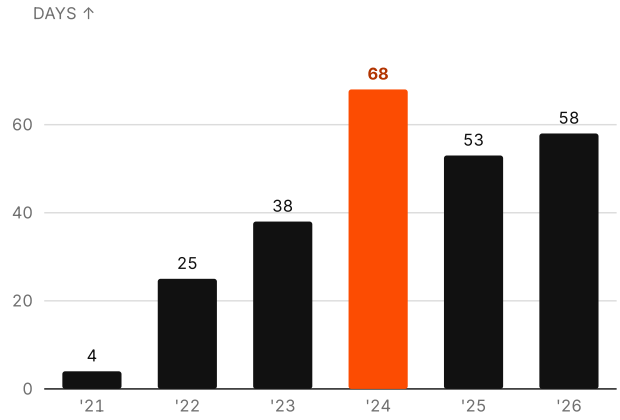

76%
out again the next day

50%
out again after a full rest day

EVERY DAY OUT SINCE 2021, BY ITS DISTANCE

DAYS UNDER 2 KM EACH YEAR

Keep a floor.

My big weeks have not changed much over the years. What changed is the quiet weeks. From 2022 to 2025 some weeks slipped very low. In 2026 none has, and the middle half of my weeks are between 41 and 72 km. If the bad weeks are not too bad, the year takes care of itself.

WEEKS ON FOOT

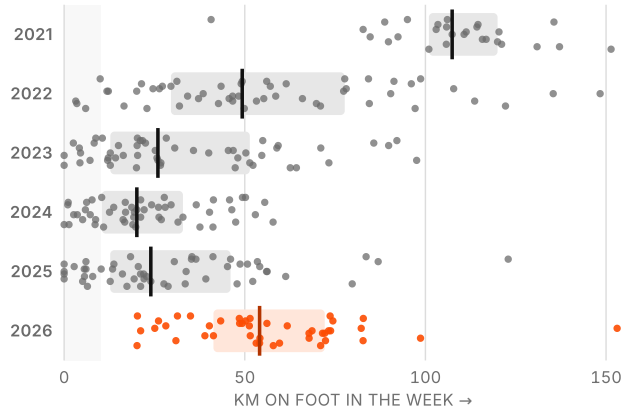

20 km
my lowest week of 2026

0 weeks
under 10 km in 2026

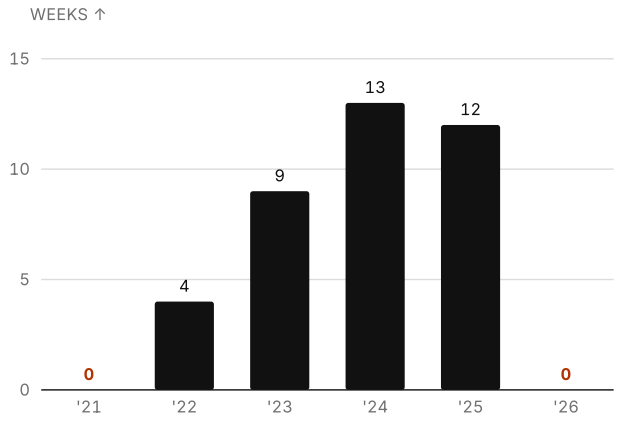

38 weeks
under 10 km, 2022 to 2025

8.2 km
a day in 2026

EVERY FULL WEEK, BY ITS DISTANCE

WEEKS UNDER 10 KM EACH YEAR

Long days come in bunches.

My long days do not come alone. The day after one, I usually go out again, and further than normal. The three days before are bigger than usual too. So for me the long days come in the middle of a busy time. After a long run, a full rest the next day is rare.

DAYS OF 21 KM OR MORE SINCE 2021

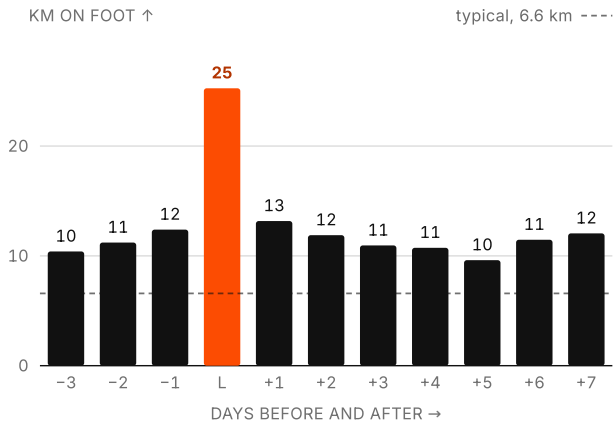

120 days
of 21 km or more on foot

90%
followed by another day out

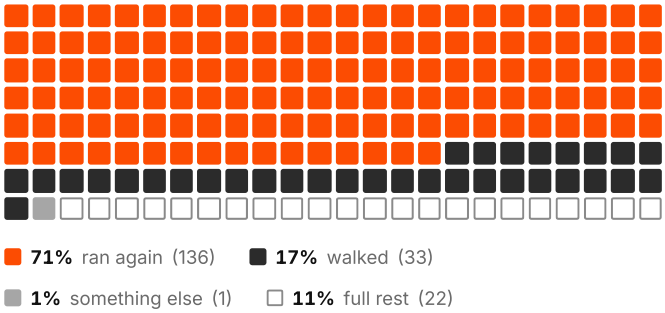

13.2 km
the next day, against 6.6 km on a typical day

11%
full rest after a 15 km run

THE DAYS AROUND A LONG DAY

WHAT CAME THE DAY AFTER A 15 KM RUN

71% ran again (136)
17% walked (33)
1% something else (1)
11% full rest (22)

5 · DAYS AND DISTANCE

How a year adds up.

A year's total is just two things: how often I go out, and how far I go each time. 1,000 km a year is a short outing every day, or about 4.1 km on two days in three. I have done it both ways. 2021 was a year of long days on about half the days. 2026 is a year of going every day, shorter each time. 2024 was low on both, and it became my lowest year since the habit started.

THE TWO LEVERS

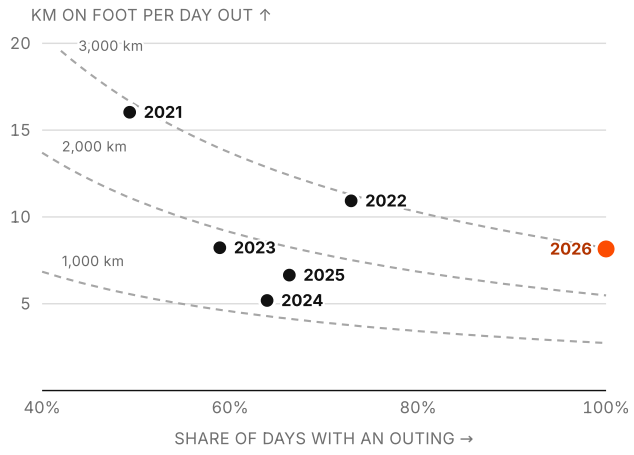

2.7 km
a day makes 1,000 km a year

16.0 km
per day out in 2021, the longest

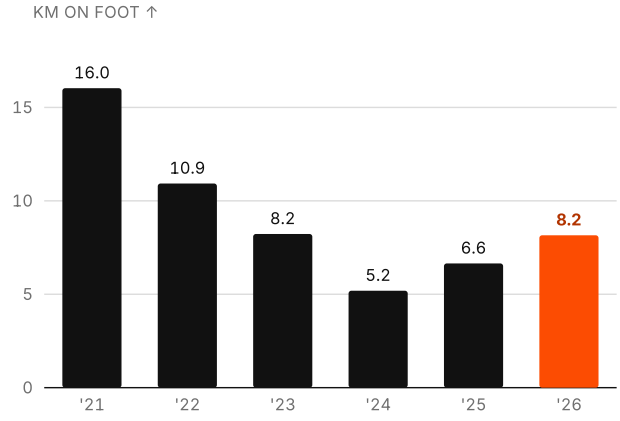

100%
of days out in 2026 so far

1,214 km
in 2024, low on both

EACH YEAR BY ITS TWO LEVERS

DISTANCE PER DAY OUT

6 · WHAT I WOULD TELL YOU

If you are starting out.

That is what seven years of logging say to me. Nothing here is special. It is about an hour a day, a small version on the bad days, not letting a week get too thin, and long days in the middle of busy weeks. There are 67 days of 2026 left. *Kesho tena*, tomorrow again.

FROM THE LOGBOOK

“Break the long challenges into increments, things you can do right now that add up over time.”

DAN CNOSSEN

Epilogue

The last activity in this edition is from 25 October 2026. I am on 301 days in a row, and the habit that started in 2021 has now lasted 1,947 days.

None of these totals came from one big effort. They came from 2,061 ordinary outings, most of them short, early in the morning or in the evening, on days like any other. The log will keep growing, and the next edition will have the new numbers.

I will be out tomorrow.

Gerald Tesha

ANNEX A

How this book was made

This book started as a website, My Strava Journey, where I laid out my Strava history so anyone could read it. None of the figures are typed in by hand. They are all worked out from my activity log, which I refresh every week.

Each week I pull my latest activities from Strava through an MCP server. MCP, the Model Context Protocol, is an open standard that lets an AI assistant connect to other tools and data. Here it connects to my Strava account and gives back every activity in one raw CSV file.

A set of Python scripts then rebuilds everything from that file: the activity log, the totals on foot, the places, the streaks, the records and the tables behind each chart. Before anything is published, activity names, Strava IDs and exact GPS points are taken out. Then the checks run and the site goes live with the new numbers. This edition has 2,061 activities, up to 25 October 2026.

I built it with Claude, Anthropic's AI model, helping with the code and the analysis. I decided the questions, the design and how it should read. Claude wrote the code, dug through the data and checked each number against the log before it went into the text.

DATA SOURCE	My Strava activity history, pulled weekly through an MCP server
PIPELINE	Python, standard library only: rebuild, foot-only totals, derived tables, privacy pass
DATA STORE	32 CSV tables that every number comes from
SITE	React 18 and Vite 5, React Router with hash links, PapaParse to read the CSVs
CHARTS	Drawn by hand in SVG and canvas, without a chart library
TYPE AND COLOUR	Archivo and Inter on a simple grid, with Strava orange kept for the data
QUALITY	Data validation, tests, an axe accessibility audit and layout checks at phone widths
HOSTING	GitHub Pages, from the repository github.com/hpgerald/my-strava-journey
BOOK	The site printed through headless Chromium to an A4 PDF

The weekly pipeline

01 Strava
Every outing I record lands in my Strava account.

02 MCP pull
Each week the latest activities come out through an MCP server, as one raw CSV.

03 Build
Python scripts rebuild the activity log and every table derived from it.

04 Privacy
Names, Strava IDs and exact GPS points are removed, and places are kept to country and region.

05 Checks
The data rules, tests, accessibility and phone layouts are checked.

06 Site
The site reads the tables in the browser and draws every chart from them.

07 Book
The same pages print as this book, and I make a new PDF with each refresh.

ANNEX B

About the data

Where the numbers come from

Every activity comes from my Strava export: the date and time, sport, distance, moving and elapsed time, climb, heart-rate effort, kudos and personal records. Places come from each activity's GPS start point, kept only to country and region.

Distance and climb only count the four sports on foot: runs, walks, trail runs and hikes. Everything else counts as other activities. Those still count as outings and days out, but they add no distance or climb, and I do not name them.

A treadmill run is one that Strava marks as done indoors. Those have no GPS, so they never show up on a map and set almost no segment records.

Relative Effort	Strava's score for how hard a session was, based on the time spent in each heart-rate zone. The higher it is, the harder my heart worked.
Kudos	A thumbs-up from someone on Strava, the same idea as a like.
PR	Personal record: my best time on a segment or over a set distance.
Achievement	A badge Strava gives on a segment, for a top-10 time or a personal best.
Elevation gain	All the metres climbed in an activity, added up over every uphill stretch.
Moving time	The time I was actually moving, with the pauses taken out. Elapsed time includes the stops.
Trainer	An indoor session, like a treadmill run, as marked by Strava. These have no GPS.

THE AUTHOR

Get in touch.

I am Gerald Tesha. I work in monitoring, evaluation and data, and this book is what I did with my own numbers. If you would like something like this made from your own data, or would like to work together, I will be happy to hear from you.
